Towards a Synthesis of Multimedia and Intelligent Tutoring Systems

A dissertation presented in partial fulfilment of the requirements for
the degree of Master of Science in Computer Science at Massey
University
Palmerston North, New Zealand.

Emma A. K. Vethanayagam

1998

Abstract

Multimedia is being used almost in every field. This study is about the use of multimedia in the area of intelligent tutoring systems. This project studies the advantages and disadvantages of interactive multimedia and intelligent tutoring systems, and analyses the ways of combining these technologies in search of an interesting, learnable, flexible, compelling and technology-enhanced educational tool.

Educational packages need to be evaluated for effectiveness. When it comes to computer-based instruction, technical concerns such as multimedia effects are taken seriously and there is not enough emphasis on its educational value. There is not much concern about the appropriateness of the instruction method to the computer medium. This research proposes a framework for evaluating educational packages which include a number of issues.

Several pieces of educational software were evaluated using this framework and *Diagnosis for crop protection*, a multimedia software package that aids in teaching the process of diagnosing crop problems, was selected for modification, as a practical application of the theoretical work.

We studied different multimedia system development models and methodologies. We also analysed the cognitive issues and intelligent features that enhance the learnability.

Finally, the appropriate intelligent features and other factors that could enhance *Diagnosis for crop protection* to be a more 'active knowledge constructing' environment have been identified. The current version of *Diagnosis for crop protection* was represented using an appropriate methodology and the proposed changes were described in detail.

Acknowledgments

First of all, I am eternally grateful to my uncle Stanny Emmanuel, for his moral and financial support in everything to initiate my masterate degree. I would like to acknowledge New Zealand government and the NZODA postgraduate scholarship office for sponsoring the second year of my program.

Next, I would like to express my sincere gratitude to Ray Kemp, my supervisor, for helping me find some suitable area for my research, excellent supervision, valuable ideas and very prompt reviews. I really enjoyed working with you.

I would like to thank Terry Stewart, for granting permission to use *Diagnosis* and for being helpful in a totally unfamiliar subject area of plant pathology. Thanks to Alex Doyle-Bolecivic, who kindly lent a few packages for studying.

Thanks also due to Computer Science department staff and postgrad students, who provided a nice environment for me to work. I would love to thank all my friends and flat mates for their friendship, encouragement, letters and emails. I absolutely enjoyed the funny things we did together.

A very big thank you for my parents and grand mother for their love and prayers. Thanks to my loving brothers and sister for all what they are. Finally, thanks to Raymond for his love and for constantly being there for me all the time. I am very proud of you all.

Without you all, this dissertation would not be the same.

Thank you very much.

Table of Contents

Abstract.....	i
Acknowledgements.....	ii
Table of Contents.....	iii
Figures.....	vii
1.0 Introduction	
1.1 Background.....	1
1.2 Multimedia Tutoring Systems.....	2
1.3 Scope of the project	4
1.4 Aims and Objectives.....	5
1.5 Organisation of research.....	6
2.0 Artificial Intelligence and Multimedia in Educational Software	
2.1 Introduction.....	7
2.2 Effective Learning.....	8
2.3 Why do we need computer-based tutoring systems?	9
2.4 Intelligent Tutoring Systems (ITS)	11
2.4.1 Merits of some ITSs	14
2.4.2 Problems in ITS.....	16
2.5 Interactivity.....	16
2.6 Multimedia	18
2.6.1 Interactive Multimedia	19
2.6.2 Advantages of Interactive Multimedia	20
2.6.3 Disadvantages of Interactive Multimedia	22
2.7 Intelligent Multimedia Systems for teaching and learning	23
2.8 Concluding Points	25

3.0 Evaluating Educational Software

3.1	Introduction	28
3.2	Why Evaluate?	30
3.3	Widely used evaluation techniques	32
3.4	Issues to be considered in evaluation of educational software.....	34
3.5	Intelligent features	35
3.6	Proposed appropriate evaluation technique	36
3.7	Evaluation of some educational packages	43
3.7.1	Angle 3.3j	43
3.7.2	The Equation Solving Tutor	46
3.7.3	OzSoils	48
3.7.4	Diagnosis for crop protection	50
3.7.5	Investigating Lake Illuka	53
3.7.6	Exploring the Nardoo	56
3.8	Reflection on evaluation	59

4.0 Designing Intelligent Multimedia Tutoring Systems

4.1	Introduction	61
4.2	Design Issues	62
4.2.1	Feasibility and Use of multimedia	62
4.2.2	Type of instruction	63
4.2.3	Motivational Issues	64
4.2.4	Feedback design	64
4.2.5	Screen Design	65
4.3	Problems in Multimedia system design	65
4.4	Design Models	70
4.4.1	Models and Fidelity of Models	70
4.4.2	Design Methodologies	72
4.5	Diagnosis Design	79
4.5.1	Problems in Diagnosis design	79
4.5.2	Representing Diagnosis	80
4.6	Discussion	81

5.0 Cognitive Issues, Intelligent features and Human Issues

5.1	Introduction	83
5.2	Learning theories	84
5.3	Cognitive Issues and Human Factors	89
5.3.1	Comprehension	90
5.3.2	Metacognition	91
5.3.3	Interactivity	92
5.3.4	Perception and attention	94
5.3.5	Memory	95
5.3.6	Active learning	95
5.3.7	Motivation	96
5.3.8	Locus of control	97
5.3.9	Visualisation	98
5.3.10	Cognitive Tools	99
5.4	Intelligent Features	101
5.4.1	Student Modelling	102
5.4.2	Feedback	106
5.4.2.1	Timing of feedback	108
5.4.3	Learner control	109
5.5	Appropriate elements for <i>Diagnosis</i>	111
5.6	Discussion	113

6.0 Diagnosis : From Game to ITS

6.1	Introduction	116
6.2	Shortcomings in Diagnosis	117
6.3	Proposed alterations to enhance Diagnosis	118
6.4	Detailed Design Suggestions	118
6.4.1	Error types	118
6.4.2	Feedback	120
6.4.3	Player Model	122
6.4.4	Previous session details	123
6.4.5	Classification of Problems	124
6.4.6	Style of Presentation	125

6.4.6.1	Presentation for poor player	126
6.4.6.2	Presentation for average player	126
6.4.6.3	Presentation for good player	126
6.4.7	Initial diagnosis and remedy	127
6.4.8	Reference Book	128
6.4.9	Guided Builder	128
6.5	Do the proposed changes make Diagnosis intelligent?	130
6.6	Discussion	134

7.0 Conclusion and Further Work

7.1	Introduction	136
7.2	About the research.....	136
7.3	Further Work : What else could be done to <i>Diagnosis</i> ?	138
7.3.1	Situated Learning	139
7.3.2	Why Situated learning ?	141
7.3.3	Combining Situated learning and Gaming	143
7.3.4	Problems to be addressed	144
