I give permission for my thesis, entitled

FLOWER DEVELOPMENT OF THE CHINESE GOOSEBERRY (Actinidia chinensis Planch.)

AND SOME FACTORS INFLUENCING IT.

to be made available to readers in the Library under the conditions determined by the Librarian.

(b) I agree to my thesis, if asked for by another institution, being sent away on temporary loan under conditions determined by the Librarian.

(c) I also agree that my thesis may be microfilmed for Library use.

I do not wish my thesis, entitled

to be made available to readers or to be sent to other institutions without my written consent within the next two years.

   (b) Direction of the phyllotactic helix

C. DISCUSSION

THE EFFECT OF DEFOLIATION, SHADING, AND TIPPING ON FLOWER DEVELOPMENT AND CONCURRENT VEGETATIVE GROWTH

A. INTRODUCTION

B. EXPERIMENTAL OBSERVATIONS AND RESULTS

I Reproductive Growth
   (a) Number of flowers per shoot
   (b) Average ovary or flower bud size per shoot

II Vegetative Growth
   (a) Leaf growth
      (i) Leaf production per shoot
      (ii) Average leaf size per shoot
   (b) Shoot growth
      (i) Shoot length
      (ii) Shoot thickness

III New Bud Development

C. DISCUSSION

THE EFFECT OF CHILLING ON THE TERMINATION OF REST AND FLOWERING

A. INTRODUCTION

B. EXPERIMENTAL OBSERVATIONS AND RESULTS
Chapter I  Bud Burst
   (a) Days to bud burst
   (b) Percentage bud burst

Chapter II  Flower Bud Development
   (a) Number of reproductive axils per shoot
   (b) Number of aborted reproductive axils per shoot
   (c) Number of flower buds per shoot
      (i) Terminal flower buds
      (ii) Lateral flower buds
      (iii) Total number of flower buds
   (d) Average flower bud size per shoot
      (i) Terminal flower buds
      (ii) Lateral flower buds
      (iii) Average flower bud size (all buds included)

C. DISCUSSION

6 A SURVEY OF THE FLOWERING CHARACTERISTICS OF
VARIOUS CULTIVARS AND STAMINATE VINES

A. INTRODUCTION

B. EXPERIMENTAL OBSERVATIONS AND RESULTS
   I  Staminate Vines
      (a) Number of flowers and flowering axils per shoot
      (b) Percentage of shoots bursting per lateral
      (c) Flowering index for grouped vines
      (d) Number of flowers per inflorescence
      (e) Distribution of flowers per shoot
      (f) Flower opening sequence

   II  Pistillate Cultivars
      (a) Number of flowers and flowering axils per shoot
      (b) Percentage of shoots bursting per lateral
      (c) Number of flowers per inflorescence

ACKNOWLEDGEMENTS

I wish to gratefully acknowledge Mr D.A. Slade, Department of Horticulture, Massey University and Dr R.M. Davison, Plant Diseases Division, D.S.I.R., for their guidance and constructive criticism throughout this study and in the preparation of the manuscript.

I wish to express my appreciation to Mr I.M.W. McEwen on whose property the bulk of the experimental work was carried out.

I would also like to thank: The Director of Plant Diseases Division, D.S.I.R., Mt. Albert for making laboratory space and equipment available; Ms A.M. Marshall and Mr S.A.D. Tucker for advice and help on statistical matters; Mr A.P. Underhill and Mr D.M. McVicker for photographic assistance; my mother and sister for typing this thesis; Mr W.S. Bertaud, Physics and Engineering Laboratory for the Scanning Electron Microphotograph in Figure 11; and to any persons remaining unnamed who gave advice and assistance on this work.

Finally, I wish to thank the Kiwi Fruit Export Promotion Committee and the New Zealand Citrus and Subtropical Council for their generous financial assistance.
