# **Farmer Cooperatives in Mexico**

## **Case studies in Jalisco**

A thesis presented in partial fulfilment of the requirements for the degree  
of Master in AgriCommerce at Massey University,

Palmerston North, New Zealand

**Rex Mauricio Romero Paz**

**2016**

### **Abstract**

Farmer cooperatives are businesses owned and controlled by (and for) their members in order to create welfare and satisfaction beyond simple profitability. In developing countries, farmer cooperatives have been formed in rural areas in an effort to improve social integration, social equity, market and information transfer. Additionally, cooperatives have reduced the negative economic impact of market power and uncertainty through lower transaction costs, higher incomes and collective bargaining power.

However in Mexico, cooperatives have faced an increasingly competitive and dynamic environment and have not adhered to the principles and values, such as solidarity, self-help and mutual aid, established by cooperative legislation. There is a lack of education, training and culture in relation to cooperatives. In addition, there is limited government support for financing, no stimulation for their creation and development and no public technical assistance. Despite this situation, in the state of Jalisco, there are successful consumer farmer cooperatives, whose main objective is to supply feed input (concentrates) to their members at the lowest possible cost. They have been able to achieve this by leveraging the collective bargaining power of members via the cooperative union.

In order to identify factors for success in relation to the farmer cooperatives in Jalisco, a mixed methodology study was undertaken, using three case studies and a survey. Three farmer cooperatives in Los Altos, Jalisco were selected for the research: Pedro Ezqueda, Nutrimentos and Prolea. The results from the study showed that the following factors influence the success of farmer cooperatives in Jalisco: leadership; member knowledge and continuity; effective communication; member satisfaction; training; and government support.

Additionally, challenges faced by these cooperatives include: poor understanding of cooperative principles among members; low enthusiasm for attending training; individualistic members with limited trust between them; lack of member commitment and participation in their cooperative; lack of young people joining the agriculture industry (including cooperatives); and no clear public policies regulating the agricultural sector. Despite these issues, farmer cooperatives have been successful within the challenging and dynamic environment in Mexico.

**Keyword:** Jalisco, Mexico, farmer cooperatives, factors for success

## **Acknowledgements**

I would like to thank NZAID for giving me the opportunity to do my post graduate studies in New Zealand.

I am also grateful to my supervisors Professor Nicola Shadboldt, Professor Nicolas Lopez-Villalobos and Dr. Elena Garnevska; your guidance, knowledge, patience and encouragement have been important this year. Also, thanks to Fleur Connor-Douglas for all your help polishing and formatting this thesis.

At Massey, thanks to all my agricommerce friends and colleagues: Hamish, Bryan, Tim, Ben and DJ.

Many thanks to Felipe, Maca, Javier, Sarah, Juan and Dani for your friendship and support over these two years in New Zealand.

Thanks to Andy Gomez for letting me know about this programme.

Thanks to all the people that helped me during my data collection in Jalisco, especially Dr. Jesus Olmos and David Orozco.
