SOCIAL INDICATORS AND GEOGRAPHIC RESEARCH : AN  
EXPLORATORY STUDY OF SPATIAL VARIATIONS IN  
THE PROVISION OF COMMUNITY SERVICES AND  
ACCOMMODATION FOR ELDERLY  
PEOPLE IN NEW ZEALAND

A Thesis Presented in Partial Fulfilment of the Requirements  
for the Degree of Master of Arts in Geography  
at Massey University

By

STEPHEN GRAHAM BRITTON

1974

ii.

As with any post-graduate work, this thesis could not have been so successfully completed without the guidance and assistance of many people. While it is always difficult to weight the contributions of various individuals, particular attention and appreciation must be given to my supervisors - Mr Geoff Thomas and Dr Richard Le Heron. The final draft of this thesis in many ways represents a joint effort on the part of Geoff, Richard and myself, particularly in the conceptualisation and organisation of the ideas presented. I am deeply grateful for having worked alongside two people who through their own perceptiveness, their ability to generate ideas, their grasp of conceptual and methodological issues and their much appreciated sense of humor, have been a source of motivation to me and have contributed to my development in both a personal and vocational sense.

Recognition must also be extended to Professor K W Thomson and other members of the Geography Department staff at Massey University who have given me practical and moral support during the last two years. I would especially like to thank Mr Cros Walsh and Mr Eric Warr not only for their friendship but also for their advice and encouragement.

The empirical section of this thesis would not have been possible without the co-operation of several government agencies. To this end I would like to thank Miss Janet Henesy of the Management Services and Research Unit of the Department of Health, who made access to survey data possible and so readily responded to many calls for assistance during this last year. Without her friendly co-operation the monitoring procedure in Chapters 4 and 5 would not have been carried out.

I would also like to extend my thanks to Mr Merv Hancock, a representative on the N. D. C. Social Council, who made valuable contributions to the section on social indicator development, particularly with the construction of the two housing schemas.

Recognition must also be given to Mr Bruce Dickenson and other members of the staff in the Department of Statistics who willingly shared their experience in the development of social indicators with me during the early stages of writing this thesis.

The monitoring procedure carried out in Chapter 5 would not have been so comprehensive had I not had a great deal of co-operation from the Local Authority councils, who replied to my survey questionnaire. That the councils of 20 out of the 21 cities to whom questionnaires were sent readily responded to my requests for data indicates the extent of the co-operation I have received. I thank all those individuals on these City, Borough and County Councils who took the time to make this valuable data source available to me.

The typing of theses is always a time consuming and labourious task so I would like to say thank you to my typist, Mrs Sandy McGowan, who has shown great patience and good nature during the preparation of discussion papers, drafts and the final copy of this thesis.

Finally, I would like to say thank you to my wife Sue, who not only helped with some of the more tedious cartographic tasks and collation of the thesis, but whose love, care and support has made it possible for me to further my education and to write this thesis.
