Introduction

This is the second draft of the taxonomy to identify key educational topics from the social work curriculum — *Terms for Indexing Social Work Education in Aotearoa New Zealand (TISWEANZ)*, part of the research project *Enhancing the Readiness to Practise of Newly Qualified Social Workers in Aotearoa New Zealand (enhance R2P)*, Phase One. The taxonomy (a type of controlled vocabulary with a simple hierarchical structure) is based on terms and concepts derived from the participating institutions' curriculum documents. It is a snapshot of the **actual** described curriculum rather than the **ideal**. These terms form the initial load into the taxonomy database.

Reading the taxonomy

The taxonomy is alphabetical and shows the relationships between the terms in several ways:

- *Hierarchical relationships* between broader terms (**BT**) and narrower terms (**NT**), indicating subordination among concepts and allowing for navigation between more and less specific terms. In this draft, narrower terms are grouped under their broader term and subtly indented, so the BT/NT notation is not used explicitly
- *Equivalence relationships* between preferred (**USE**) and non-preferred terms (**UF** or Use For) for controlling synonyms, abbreviations, variations in spelling, etc.
- *Associative relationships* between related terms (**RT**). In TISWEANZ, RT is used for similar concepts and for Māori and English language equivalents where both terms are used widely in the content, allowing for the natural use of te reo Māori in English-language documents

Scope notes (**SN**) provide advice on a term's usage or to distinguish between terms that may have an overlapping meaning. In TISWEANZ, scope notes also give definitions for Māori and Pasifika language terms. Terms still to be checked are noted.
