How Will Robocop Communicate?
The design of a conceptual portable radio communication product for the NZ Police in 2018
Frazer D Ellis © - 2008 - Massey University College of Creative Arts
Abstract

This Master of Design study aims to communicate affective design principles within a Tait Electronics Ltd hand-held radio for the New Zealand Police to use in the year 2018. This investigation has three distinct research aims:

A) Identify affective design principles appropriate for the design of current Tait portable police radios using the perceptual product experience (PPE) framework (Warell, 2008).

B) Use speculative scenario planning to develop an understanding of how the requirements of Tait’s portable police radios will evolve over the next 10 years.

C) Incorporate affective design principles and the brand values of Tait’s product range into a final conceptual portable police radio design for the year 2018.

A comprehensive review of contemporary affective product design theory, case studies and other relevant literature was undertaken. This included affective product design (Warell, 2008), radio communication (Marzano, 2005) and future product forecasting (Lambourne, Feiz, & Rigot, 1997). Following this review the following research methods were selected for this study:

1) Future scenario planning
2) Current product-user interviews
3) Passive product observations
Throughout the project iterative design methods were used, including 2D concept generation, concept development and 3D prototyping. The resulting conceptual product and associated documentation of this study will add to the existing body of knowledge around the application of affective design principles and portable police radio product design.

**Keywords:** radio, NZ Police, usability, performance, experience, perceptual product experience (PPE), affective product design
Acknowledgements

I would like to express my gratitude and thanks to the following individuals for their help, support and encouragement throughout the duration of this project:

I thank my supervisors, Lyn Garrett, Dr Mark Goellner & Dr Anders Warell for their guidance, knowledge and encouragement. Cheers for that.

To my fellow MDes students, Matt McKinley, Will Cook, Jane Anthrop and Laura Ford, thank you for putting with my mischievous tendencies and thank you for not making a big deal when I burnt my socks in the microwave.

Thank you Celia Stanyon, Meagan Watson and Rodney Adank from AFFECT – The Research Centre. I shal not soon forget that infamous night in Christchurch.

To Leon Eramuson and Rodney Mackrell of Tait Electronics Ltd, for providing insight into the radio communication industry.

The NZ Police for their (eventual) cooperation.

To my friends and family, - Morgan Ellis, Siska and Tim Alderson, Damon Ellis, Siobhan Lehnhard, Gareth Ellis, Steph Burton, Jill Ellis (Mum), Don Ellis (Dad) Michelle McCabe and Kelsie Sharp, You all provided me with the support and encouragement to get it done.

And Cheers once again Morgan, you’re a legend.
