Exploring the Relationship between Housing Satisfaction, Neighbourhood
Social Cohesion, Accessibility, Safety and Well-Being among Older Adults

A thesis presented in partial fulfilment of the requirements for the degree of

Master of Arts

in

Psychology

at Massey University, Manawatu, New Zealand.

LaNae Fisk

2018

ABSTRACT

Objective: Housing can have a major impact on mental and physical health; this is particularly true for older adults who spend more time at home as they age. Housing satisfaction is an important environmental determinant of health for older adults and an area of public interest as people are living longer worldwide. The present study examines whether specific neighbourhood characteristics such as neighbourhood social cohesion, accessibility and safety can moderate the relationship between housing satisfaction and well-being and if these characteristics can improve well-being (measured as quality of life, life satisfaction, mental health, depression, and physical health). **Method:** Survey of older adults (aged 55+) living in New Zealand. Data was analysed using descriptive statistics and hierarchical regression analysis for hypothesis testing in IBM SPSS Statistics 25. **Sample:** Participants for the current study were selected from the 2016 New Zealand Health, Work and Retirement Study and resulted in a sample of $n = 4028$. **Results:** The present study showed that greater housing satisfaction was related to better well-being for older adults. The study also demonstrated that neighbourhood social cohesion significantly and positively impacted mental health, depression, quality of life and life satisfaction. Neighbourhood accessibility had a significant positive effect on mental health, depression, quality of life and life satisfaction. Neighbourhood safety significantly and positively influenced mental health. There were no significant results for these neighbourhood characteristics enhancing physical health. One significant interaction effect was found for depression demonstrating that housing satisfaction can be a protective factor against depression especially when living in an unsafe neighbourhood. **Discussion:** This study confirms previous research that housing satisfaction and neighbourhood characteristics are significant contributing factors to well-being for older adults. The study also examines one unique finding around neighbourhood characteristics moderating the relationship between housing satisfaction and depression. These findings have important implications for policy, planning and improving the well-being of older adults.

ACKNOWLEDGEMENTS

I would first like to thank my thesis advisors Ágnes Szabó of the School of Health Sciences and Christine Stephens of the School of Psychology at Massey University. Thank you for supporting me through this process and being so kind, helpful and encouraging.

I would also like to express my profound gratitude to my husband and family for providing me with unfailing support and continuous encouragement throughout my years of study and through the process of researching and writing this thesis. This accomplishment would not have been possible without all of you.

Thank you.

Table of Contents

1.0 Introduction	8
2.0 Literature Review	10
2.1 The Housing Crisis in New Zealand and an Ageing Population.....	10
2.1.1 Security of Tenure	11
2.2 Housing Quality	12
2.3 The Adverse Physical/Mental Health Effects of Poor Housing Quality	15
2.4 Housing Satisfaction	16
2.5 More to Well-being than the Physical Structure of a Home	18
2.6 The Importance of Neighbourhood Characteristics.....	21
2.6.1 Neighbourhood Qualities	21
2.6.2 Social Cohesion	23
2.6.3 Neighbourhood Accessibility	25
2.6.4 Neighbourhood Safety.....	27
2.7 Research Question and Hypotheses	28
3.0 Research Methodology and Data.....	30
3.1 The 2016 New Zealand Health, Work and Retirement Study	30
3.2 Sample	31
3.3 Measures.....	34
3.3.1 Demographics and Economic Living Standards	34
3.3.2 Quality of life.....	35
3.3.3 Life Satisfaction	36
3.3.4 Physical and Mental Health	36
3.3.5 Depression CESD-10	37
3.3.6 Housing Satisfaction.....	37
3.3.7 Neighbourhood Social Cohesion, Accessibility and Safety.....	38
3.4 Analytic Plan.....	39
3.4.1 Data Source	39
3.4.2 Analysis Objectives	39
3.4.3 Handling of Missing Data.....	39
3.4.4 Statistical Procedures.....	39

4.0 Results	41
4.1 Correlational Analysis	41
4.2 Independent Samples t-test	44
4.3 One-way ANOVA.....	46
4.4 Hierarchical Regression Analysis	48
4.4.1 Depression	48
4.4.2 SF-12 Physical Health	51
4.4.3 SF-12 Mental Health.....	54
4.4.4 Quality of Life	56
4.4.5 Life Satisfaction	58
5.0 Discussion.....	60
5.1 Overview of Results	60
5.2 Broader Implications of Results	65
6.0 Limitations and Future Research	68
7.0 Conclusions	70
8.0 Conflict of Interest	71
9.0 References.....	72
10.0 Appendix	98
