The Potential of Ecotourism to Contribute to Local Sustainable Development:

A Case Study in Kiet Ngong Village in Xe Pian National Protected Area, Lao PDR.

A thesis presented in partial fulfilment of the requirements for the degree of Master of Philosophy in Development Studies at Massey University, New Zealand.

Alavanh PHANTHAVONG
2009
ABSTRACT

The ecotourism industry is experiencing increasing popularity as the demand grows for tourism that is environmentally sensitive, informative, and beneficial for local communities. For over a decade, Lao PDR, an underdeveloped country, has been promoting its 20 National Protected Areas as ecotourism destinations. These ecotourism projects are positioned as tools for protecting natural resources and reducing poverty, and are generating hope for the creation of local sustainable development. At this point in time, however, the Lao government lacks effective strategies for ensuring their long term success. This thesis was designed to address this concern by analysing the potential for one of these projects, Xe Pian ecotourism, to contribute to local sustainable development. The current outcomes of the Xe Pian ecotourism project were analysed and input was sought from all stakeholders concerning ideas for desirable strategies.

Kiet Ngong village, located inside the Xe Pian NPA, Lao PDR, was selected for case study. Data was gathered by employing mostly quantitative methods consisting of semi-structured interviews, informal and formal interviews, private walks and observation, and questionnaire surveys. The findings illustrated that ecotourism in Kiet Ngong has impacted local livelihoods and other environmental, economic, social, and cultural factors in both positive and negative ways. However, the positive effects of Xe Pian ecotourism were found to be more significant than the negative effects. Importantly, Kiet Ngong residents expressed optimism about the future of ecotourism and have claimed that any negative consequences cannot discourage their desire for continuing ecotourism development. This research also revealed that the stakeholders involved in the project are able to offer a variety of strategies for resolving problems that have arisen along the way.

Results from this study identified three main points that need to be addressed in order to maintain Xe Pian ecotourism, namely the promotion of economic and political empowerment of the local population, the development of external and internal regulations, and the adoption of a community-based ecotourism approach. Further recommendations are offered for the policy planners of both the government and the project’s administrative bodies, as well as for the residents of Kiet Ngong. These are followed by additional suggestions for further study.
ACKNOWLEDGMENTS

All the way through this research, I have found it to be a frustrating but exciting and worthwhile experience. I am pleased to say it has also helped me obtain a profound understanding of development studies and valuable social experience. In recognition of the support and assistance granted me in the conduct of this research, I would like to recognize a number of people. First and foremost, I would like to express my deepest gratitude and sincere thanks to all of the participants in Kiet Ngong village for taking time to do the interviews, to talk or chat, and to respond to my questions. My special thanks also to Mr Bounheuang Khetkaysar, the head of Kiet Ngong, who provided a warm welcome, truthful assistance, and permission for me to carry out this research while also introducing me to the Kiet Ngong residents.

I wish to also express my appreciation to my host family who provided me with accommodation and food, treated me as a member of the family, and supplied their kind support. I am incredibly thankful to my research assistant, Mr BangOn Khamechant, who provided significant assistance in many ways, and special thanks goes to the head of the tourism office at Phathoumphone district, Mr Phouvong Phuomachant, who took part in an interview, provided me with vital information, assisted me in finding a suitable research assistant, and supplied accommodation and food. Also, sincere thanks to all of the government staff in Lao PDR, at every level, for their help.

I would also like to express my highest regard and deepest thanks to the Chief Technical Advisor of Xe Pian Ecotourism Project, Paul Eshoo, for taking part in an interview despite his busy schedule, and for providing some crucial information to support my research. Special thanks to the Chief Technical Advisor of Nam Ha Ecotourism Project, Steven Schipani, and to Dr. Daniela Schilcher, and Tara Gujadhur, all of whom provided me with some valuable information sources.

At Massey University, I would like to give special thanks to my chief supervisor, Professor Regina Scheyvens, and my second supervisor, Associate Professor Glenn Banks, for their academic and moral support. Their professional guidance and productive comments were critical in intensifying my ideas and refining my writing. I also feel sincere gratitude for all my other lecturers and tutors, Dr Maria Borovnik, Dr Rochelle Stewart-Withers, Gerard Prinsen and Kelly Dombroski, for building up my knowledge and serving as pillars of strength for me. Without them, this research could not have been completed successfully.

Most especially, I would like to express frank appreciation and deepest love to my sweet parents and my dear family for their emotional support and incontestable love. Also, special thanks to NZAID for providing financial support for my study at Massey University. Without them, my research would not have been feasible. Finally, a wish for all of the research contributors: have a wonderful life! May you succeed in your living, working, researching, and loving. I entreat the gods to protect you from all evils and to bring you a load of luck, happiness, success, stability, and money, since you all have an ideal heart for helping people without requiring anything in return.
