URBAN STREAM ECOLOGY – IMPERVIOUSNESS AND STREAM INVERTEBRATE COMMUNITY STRUCTURE

by

KASEY R. GORDON

**A thesis submitted to Massey University of Palmerston North in fulfilment of the
requirements for the degree of Masters of Science majoring in Ecology.**

MASSEY UNIVERSITY PALMERSTON NORTH

2010

Acknowledgements

There are many people who helped make this thesis possible. I am grateful to the Commonwealth Scholarship Fellowship Programme and New Zealand AID (NZ Aid) for the financial support, without which I would not have been able to be able to fulfil my course of study.

In particular I thank several people from the Ecology group of Massey University, Palmerston North, New Zealand. I am eternally thankful to the ever-patient Russell Death for his guidance, support and wit as well as Fiona Death for her comments and encouragement given over the years of my study. A number of people have been kind enough to help with obtaining and interpreting data, perusing my work at various stages and offering observations. These include Mike Joy, Charlotte Minnson, Jonothan Tonkin, Jessica Costall, Manas Chakraborty and Yvan Richard. Without them I would have had several more errors to wade through in my initial drafts and less mature ideas. Also, without Caroline Chin I would not have delightfully gotten through days of field work and laboratory work and have an outlet for my great jokes. I am likewise very grateful to Andre Seibers who was filled with alacrity to help me swiftly complete the most difficult aspects of my fieldwork. We did it with swank and spunk!

I am thankful to friends not affiliated with the department that took time to help me during the long days of fieldwork. I offer thanks to Cheryl Joy Fernandez, Mimi Dogba, and Suelynn Lee for cheerfully helping me with fieldwork and sharing some ardour for the study. I am also eternally indebted to Ting Wang for her unbreakable spirit and great expertise in helping with the statistical components although newly found software made our efforts redundant. Kegan Farrick, Sarah Bharath and Janice Gordon – thanks for being so exact in your criticism.

Finally, I would like to thank my parents again for their encouragement and support, and *not forgetting* the martyred stream invertebrates of years past. And, to the graduates and staff at the Ecology Department and Institute of Natural Resources for the friendships and experiences we all had.

Cheers to you all
