Work Resources and Well-being at Work

A thesis presented in partial fulfilment of the requirements for the degree of

Master of Arts

In

Psychology

at Massey University, Auckland
New Zealand

Kim Solomons
2011
Abstract

This study investigated the importance of occupational resources within the context of a sample group of Corrections Officers in New Zealand. It was hypothesised that resources including decision latitude, social support from colleagues and supervisors, and satisfaction with supervisors and job training, would make an impact on all stages of the Stress – Appraisal process, with the intention to illustrate that resources can have positive influences on a potentially demanding role. Relationships between resources and the variables of the Stress – Appraisal model were tested using regression analysis. Results revealed that overall resources made small but significant contributions to appraisal, well-being, stress and all three outcomes; job satisfaction, affective commitment and intentions to stay, but not to coping and affect. The only resource to make an impact on emotion-focused coping was decision latitude. Decision latitude, satisfaction with job training and supervisor support were the three resources most valued in this sample group of Corrections Officers. In terms of the Stress – Appraisal model, regression analysis also indicated that threat appraisal was important to emotion and support focused coping, while challenge appraisal and emotion focused coping explained significant variance to positive affect. Negative affect was only influenced by emotion-focused coping and well-being and stress was significantly influenced by affect. Given the partial support of the impact of resources and the Stress – Appraisal model, this study concludes that resources are indeed important and can make an impact on positive outcomes, however more research is required in this area to investigate other factors such as personal dispositions that may also add variance in the understanding of positive outcomes and the well-being process.
Acknowledgements

Dianne Gardner, a sincere thank you for your guidance and support during my thesis years. Your insight into occupational well-being and encouraging me to focus on the positive side of stress psychology has opened my eyes to an optimistic way of viewing work and the demands that go with it.

Mum and Dad, without you I would not be who or where I am today. I am forever grateful to you for all the support, love and care you have given me throughout the years. Thank you for putting up with my many moods and absences in order to give me a kick start in life.

Alec, you have turned into a wonderful and mature young man, and I hope even through the madness of my university years, I have been able to be an example to you.

Aleks, thank you for always being by my side, motivating and encouraging me and making me feel better, even when I think my thesis world has no end. You have been my side kick and confidant for many a year and I am very grateful for your patience and love.

Girls, you are all the best gift I have been given in New Zealand. The family I get to choose. Thanks for the support and the shoulder to lean on when things got tough. Your motivation and smiles were what lightened up my days.
