Popular Participation in Rural Development

The New Zealand/Solomon Islands
Customary Land Reforestation Project on Malaita

A Thesis Submitted in Partial Fulfillment of
the Degree of Master of Philosophy

ACKNOWLEDGEMENTS

I wish to thank a number of people without whom this thesis would never have been completed. I want to acknowledge the help of Margy, Andrew and Lucy and their forbearance of my many evening and weekend hours locked away in the study. They have helped in many ways and put up with a lot. I want to thank Brian Ponter, my supervisor, for his encouragement, intellectual challenges and personnel support. I appreciate the generous amount of study leave over a three year period provided by the New Zealand Ministry of External Relations and Trade. In particular, thanks to Colin Bell, George Troup, Hessel Baas and David Bartle for their interest in the study. Finally, thanks to Julia McMahon for proof reading my draft and her helpful suggestions. I also value the time spent with Solomon Island people whom I met and worked with over the course of the Malaita Reforestation Project. They helped me to question some of my assumptions about aid and to understand my own role as an aid official. I hope this study will contribute to more thoughtful, participatory and effective aid for those who should benefit most, the disadvantaged people of the Third World.

ABSTRACT vi

CHAPTER 1 INTRODUCTION 1

CHAPTER 2 POPULAR PARTICIPATION IN RURAL DEVELOPMENT 11

The concept of participation 12
Interpretations and perspectives on participation 22
Issues in participation 26
- Mobilisation or empowerment 27
- Levels of analysis 29
- Participation as means or end 29
- Role of local organisations 32
- Originating agencies 34
- Introduction of participation 36
- Obstacles to popular participation 37
- Is popular participation necessary and sufficient to achieve rural development? 39
Concluding comments 40

CHAPTER 3 POPULAR PARTICIPATION IN FORESTRY 43

From production-oriented to people-centred forestry 44
People's participation in forestry 47
Key factors in the design of social forestry projects 53
A working definition of popular participation in forestry 58

CHAPTER 4 A FRAMEWORK FOR ANALYSIS 62

The Cohen and Uphoff model: dimensions and contexts of participation 63
- Dimensions of participation 64
  - What kind of participation? 64
  - Who participates? 68
  - How do people participate? 69
- Contexts of participation 71
  - Project characteristics 71
  - The task environment 73
- Limitations of the Cohen and Uphoff framework 74
The systems model of human ecology 76
Korten's organisational models for project planning

- The blueprint approach
- A learning process approach

Lessons from Experience

Summary: a specific framework for analysis

CHAPTER 5 METHODOLOGY

Methodological approach
Sources of information
Indicators and measures of rural development participation
Limitations of the methodology

CHAPTER 6 BACKGROUND AND CONTEXT OF THE CASE STUDY

Forestry and land in Solomon Islands
- The importance of forestry in Solomon Islands today
- Land policy and forestry development

Land and social change in Solomon Islands
- The people
- The importance of land - past and present
  - Land and the big-man polity
  - Land within a Solomon Island cosmology
  - Living in two systems

Social change on Malaita
- The Kwara’ae

Summary comments

CHAPTER 7 PARTICIPATION IN THE MALAITA
REFORESTATION PROJECT

Project description
- Initiation
- Implementation
- Evaluation

Dimensions of participation in the project
- What kind of participation?
  - Participation in decision-making
  - Participation in implementation
  - Participation in benefits (or harmful consequences)
  - Participation in project monitoring and evaluation
- Who participated?
  - Members of the landowning groups
  - Leaders of the landowning groups
  - Solomon Island government and non-government personnel
  - Foreign personnel
- How did participation occur?
- Participation for what purpose?

ABSTRACT

This study explores the concept of popular participation in rural development with particular reference to the forestry sector and its role in poverty alleviation. It starts with the premise that popular participation is necessary to address poverty issues and that popular participation can be promoted through aid projects funded by bilateral aid donors and implemented through government bureaucracies. The case study of an aid-funded social forestry project in Solomon Islands highlights impediments to aid agency promotion of popular participation: different objectives from local people, a blueprint approach to project management, and lack of experience in community development, and identifies some of the difficulties of working with Third World bureaucracies: a top down approach to development, limited resources, inexperience, and a weak infrastructure. Nevertheless, it concludes that a participatory approach to project planning and implementation is possible.
"Forests, land and people in the Solomon Islands are inseparably linked together. The forests are a vital part of the country's cultural heritage and contribute to the welfare and economic development of the people. The environment and ecological stability of the islands is conditioned by a protective covering of forest on the higher land, along rivers, coasts, and in many other sensitive areas. Our national survival depends on what we do with our forests."

(SI Ministry of Natural Resources, 1989:5-6).
