A Good Start:
Supporting Families With A First Baby

A thesis presented in partial fulfilment of the requirements for the degree of

PhD
in
Social Policy and Social Work

at Massey University, Albany,
New Zealand.

Irene Anne de Haan

2011
Abstract

The study explored first time parents’ experiences during transition to parenthood, focussing on types and aspects of support found helpful or unhelpful. In New Zealand the state has a role in supporting new parents; yet high rates of child maltreatment indicates room for improvement in support provided. In recognising that infants have a basic right to optimal care, and in exploring how families can be better supported to provide such care, the study is aligned with a human rights approach to social work research.

Twenty five women in diverse circumstances were interviewed before and after the birth of a first baby. Twelve ‘significant others’ were also interviewed, each once, after the baby’s birth. In order to build enough knowledge of participants’ experience to make pertinent recommendations for beneficial change in the system of support for families in transition to parenthood, attention was paid to gathering detail about practical realities of participants' everyday experience. A narrative approach and a resilience perspective were used in analysing results.

It was found that while keen to parent well, participants were unprepared for the realities of life with a baby. Issues they had not expected included: uncertainty associated with learning to parent; isolation; financial strain; problems linked to returning to paid employment; role and relationship change; and concern about being a ‘good’ parent. An overarching theme was ‘the constantness of it’, a phrase denoting absorption in an unremitting new routine marked by chronic tiredness and ‘24/7’ responsibility. The study indicates that first-time parents go through a process of developing competence while coping with new challenges. While financial strain was a pressing issue for participants in diverse circumstances, many wanted to ‘be a mum’ and were reluctant to use childcare and return to jobs. The data indicate that current policy and service provision does not always meet first time parents’ actual needs, including opportunities to learn infant care skills and relevant information for new fathers. A more flexible, responsive set of services might be created by customising standard services to more closely match needs and preferences of specific groups of new parents.
Acknowledgements

First and foremost I want to thank the women and men who graciously welcomed me into their homes and told me their stories. Without you, this study would not have been possible.

During the somewhat winding journey to its completion, the study was discussed with many people and I am grateful to all who took an interest and asked thought-provoking questions. I am especially grateful to the people who acted as key informants and gave me their time to talk about the study in depth.

Of many friends who cheered me on, two had a special role. Eileen Clarke generously and graciously gave me the benefit of her knowledge and wisdom about research and culture. Mary Ann Powell provided sustained, collegial support.

My supervisors, Mike O’Brien and Michael Belgrave, provided different and complementary knowledge, insight and guidance about what turned out to be a more complex topic and a more difficult task than first envisaged. Their support is valued.

I could not have completed this study without the unwavering backing of my husband, Michael de Haan, who was invariably patient and quietly optimistic, always believing that I could negotiate the challenges that I encountered. Thanks also to Robin and Hyun-Jin, Steffan and Laura, for your staunch support.

I acknowledge with gratitude the financial support I received through a Social Policy, Evaluation and Research (SPEaR) scholarship from the Ministry of Social Development. This scholarship brought welcome opportunities to talk with others engaged in social research or interested in the topic of my study. In particular, I want to recognise the work and the expertise of the late Raewyn Good, SPEaR Project Advisor.
# TABLE OF CONTENTS

## CHAPTER 1  Introduction
- Research questions 2
- Resilience 3
- Scope of the study 4
- A good start: a basic human right 6
- Structure of the thesis 7

## CHAPTER 2  The policy context
- Local landscape of formal and semi-formal support 9
- Demography of childbirth 11
- Meaning of family 14

## CHAPTER 3  Documenting resilience: From steel dolls to pathways to resilience
- Protective factors 23
  - Individual attributes 23
  - Family qualities 24
  - Supportive systems outside the family 24
- The devil in the detail 24
- Family resilience 26
  - Therapeutic perspective 27
  - Structural perspective 32
  - Situation focus 34
- Terminology: adversity; risk, ‘steeling effects’ 37
  - Adversity 38
  - Risk 38
  - Risk chains and cascades 42
  - Protective chains, steeling effects, inoculation, turning points 44
- Competence and good outcomes 46
- Context 49
- Self-efficacy 49
- The big picture 50
CHAPTER 4  Support
Support: ‘Complex to assess, to get right and to deliver’ 57
Engagement 60
Effectiveness 62
Managing support 66
Support for transition to parenthood 68
Towards fieldwork 71
Connecting resilience to support 72

CHAPTER 5  Methodology and methods
Methodology 75
Narrative inquiry 81
Methods 83
Recruitment 87
Ethical issues 89
Reflexivity 91
Analysis 94
Process of analysis 102

CHAPTER 6  ‘Ready or not’: preparing for parenthood
Emotional support and learning 109
‘Hearing stories’ 110
‘My own midwife’ 110
‘Nothing you couldn’t get out of a book’ 114
‘Not too sure’ 117
Nesting 121
‘A pressure cooker situation’ 122
‘Watching the money’ 124
‘Working harder’; ‘saving up’ 125
Paid Parental Leave 127
Income Support and tax credit 128
Ready or not? 129

CHAPTER 7  ‘Meeting the baby’: childbirth and the first few days
Novice parents 131
The birth
  *Childbirth and self-efficacy*

The ‘invisible man’

‘Consumed by breastfeeding’
  *Support for breastfeeding*

Being ‘looked after’

A ‘steep learning curve’

‘In the deep end’

‘Where’s the manual?’

First steps on a pathway to family resilience

**CHAPTER 8**  ‘The constantness of it’: the first three months

‘The constantness of it’

‘You just don’t know’

‘Nobody cares what I do with my day’

‘Reining in spending’
  *Financial support*

‘Out of the haze’
  *Back to the workforce*

‘A life-changing experience’

‘Doing it right’

**CHAPTER 9**  The work/life balancing act: the first year

‘Asking questions’
  *Plunket*

‘Still the division of labour’
  *Becoming a father*

‘Feeling connected’
  *Belonging*

‘I’ve just got to think what I actually want to do’
  *Not a dollar spare*

‘The next level’
  *Avoiding the ‘tipping point’*

‘Pressures’

‘Someone to talk to’
CHAPTER 10 From shore to shore
Looking back 222
An overview of year of parenthood 224
An application of the concept of resilience 233
   Developing competence 233
   In danger of sliding towards a cascade of problems 233
   Turning points 234
   Drawing on resources at all ecological levels 234
   Self-efficacy 238
   Recognising context 239
A blurred and incomplete big picture 239
A view of support 241

CHAPTER 11 Conclusion
Implications for policy and service provision 249
   Further research 251
Who benefits? Who misses out? 252
