A SYSTEM OF MEAL PLANNING FOR SELF-IMPROVEMENT
OF THE DIET OF VILLAGERS IN NORTHEASTERN THAILAND

A Thesis presented in partial fulfilment of the requirements for the Degree of Doctor of Philosophy in Food Technology at Massey University

TIPVANNA NGARMSAK

February 1983
ABSTRACT

A method for self-improvement of nutritional status was developed for the villagers in Northeastern Thailand using the raw materials already available in the villages with cowpeas as a protein supplement. A low cost and nutritionally balanced 7-Day menu was designed for a family unit; it was based on the foods and food dishes already eaten in the villages, the present eating pattern of the villagers and protein maximized dishes. It was designed and introduced using a three stage system – study of the present foods eaten, development of the cowpea dishes and the 7-Day menu and introduction of the 7-Day menu to the villages.

A survey of eating habits was conducted in ten villages in Khon Kaen Province, to find information on the types of food raw materials available in the villages, the types of foods and food dishes eaten throughout the year, the legumes and legume foods eaten in the villages. Twenty five cowpea recipes were developed from the traditional dishes and protein maximised using linear programming. They were highly acceptable to a taste panel of villagers. The protein content of 22 commonly eaten food dishes were also maximised using linear programming. These protein maximised dishes together with the other foods eaten by the villagers were used to develop a 7-Day menu in the traditional village meal pattern. A system was developed using mixed integer programming to select an acceptable daily menu pattern which could supply an adequate quantity of food for a family of 7 persons and meet their requirements for 26 essential nutrients. The 7-Day menu consisted of 6 daily menus of 29 foods and food dishes including 11 cowpea dishes and steamed glutinous rice. The 7-Day menu was found highly acceptable by the villagers.

Three Introduction Models fitting with the village lifestyle were developed for introducing the 7-Day menu and the cowpeas to 6 villages in Khon Kaen Province. Each model was tested in two villages during a 21 week introduction period. The most successful introduction method was to firstly explain the whole menu to the village headman, and then
with his help organise a party for the villagers to introduce the menu and the cowpeas and to give nutritional information. Video demonstrations were used to teach the cooking methods for the various dishes and a cooking competition encouraged the villagers to cook the dishes and to follow the menu. This method of introduction created a large increase in the number of villagers using cowpeas.
ACKNOWLEDGEMENTS

The success of this project was due to the cooperation of the many villagers who took part in the food eating survey and in the introduction of the 7-Day menu to the six villages. Without their participation, there would have been no research study, and I shall always be grateful for their help.

This work would not have been possible without the support of the staff of Khon Kaen University, in particular Dean Kavi Chutikul of the Faculty of Agriculture.

The team in the KKU-IDRC Home Processed Legumes Project enthusiastically helped in the food eating surveys, development of the protein maximised recipes and in the introduction of the 7-Day menu to the six villages, their cheerful and willing help in the villages made it possible for such an extensive study to be undertaken.

This research would not have been accomplished without the thought and invaluable guidance of my supervisors.

I wish to express my deepest gratitude to my supervisors, Dr. Mary Earle and Dr. Allan Anderson for all the help, time and encouragement which they provided during the course of this work.

I wish to dedicate this research achievement to my Chief Supervisor, Dr. Mary Earle.

I should also like to thank the New Zealand Ministry of Foreign Affairs who provided a scholarship for this research study and the International Research Development Centre, Ottawa, Canada who provided funds for the village introduction.

I wish to express my appreciation to various people who assisted this research in many ways.

In particular, I would like to thank Sally Vogel, IDRC, Edmonton, Canada for supporting and encouraging this research study.

Prof. R.L. Earle and Prof. E.L. Richards of the Faculty of Food Science and Biotechnology, Massey University for providing facilities for the research and their encouragement.

The staff of the Food Technology Research Centre, Massey University for their continuing interest in the project and for the help in overcoming the problems that arose during the work at the university.

The staff of the Computer Research Centre, Massey University for their help in the computer work.

The staff of the Nutrition Research Centre, Mahidol University, Bangkok for their advice on nutritional aspect of the project.

Miss Vivienne Mair, my typist for her willingness always to spend time typing and correcting the final manuscript.

Finally, to my family and friends for their continual support, I shall be always be very grateful. I should like to thank my husband, Supachai Ngarmsak, for his understanding and encouragement and the final preparation of the thesis and my daughter, Manachaya (Jupjang) for her helpfulness in making it possible for me to have time to complete this research and my mother for her care and support.

INTRODUCTION 1

PART ONE:
SURVEY OF FOOD EATING HABITS IN TEN VILLAGES IN KHO KAE N PROVINCE 8

1. The Food of Villagers in Northeastern Thailand 9
   1.1 Food habits in Northeastern Thailand 9
   1.2 Dietary surveys in Northeastern Thailand 11
      1.2.1 Dietary intakes of infants and preschool children 11
      1.2.2 Diet of pregnant women 11
      1.2.3 Dietary survey in Nong Kohn village and an urban area in Ubol Province 12
      1.2.4 Dietary survey of 42 families in seven villages in Kho Kae n Province 13
      1.2.5 Dietary survey in Nakorn Rachasrima Province 15
   1.3 The cause of nutritional problems in Northeastern Thailand 15
   1.4 The need of a survey on the food eating habits 17

2. Survey Methods Used in Food Consumption Studies 18
   2.1 Food consumption surveys 18
      2.1.1 Food weightment method 19
      2.1.2 Food composite analysis 19
      2.1.3 Food recall 19
      2.1.4 Inventory or log book method 20
      2.1.5 Food list 20
      2.1.6 Diet history 20
      2.1.7 Food account 21
      2.1.8 Calculation and interpretation of dietary intake 21
   2.2 Choice of methods used in food consumption studies 22
   2.3 Choice of method used in this survey 24

3. The Survey Method 26
   3.1 The selection of the village and household samples 26
   3.2 Method of information collection 31
   3.3 The selection and training of the interviewer 31
   3.4 General organisation of all surveys 32
   3.5 The general survey on food eaten 34
   3.6 The survey on legumes eaten, grown and stroed 35
      3.6.1 Types, frequency, and quantities of legumes 35
      3.6.2 Sources of legumes eaten in villages 35
      3.6.3 The storing of cowpea seeds 35
      3.6.4 The methods of cooking and processing legumes 36
      3.6.5 Types and quantities of legume food dishes 36
      3.6.6 Consumption pattern of legumes and legume dishes 36
3.6.7 Liking of legumes and legume dishes
3.6.8 Attitude to cowpeas

4. Food Eaten in Villages in Khon Kaen Province, Northeastern Thailand
4.1 Types and sources of food eaten
4.1.1 Meat, fish and poultry and other animals
4.1.2 Vegetables
4.1.3 Fruit
4.1.4 Insects and wild animals
4.1.5 Conclusions
4.2 The eating pattern throughout the year
4.2.1 Rice
4.2.2 The number of foods eaten
4.2.3 The number of households eating different food categories
4.3 The meal pattern
4.3.1 Foods eaten in main meals
4.3.2 Food eaten between meals
4.4 Types of food eaten
4.4.1 Animal, fish and insect foods
4.4.2 Vegetable foods and cereal foods
4.4.3 Fruits
4.5 Types of food eaten by 1-5 year old children
4.6 Types of northeastern cooking
4.7 Kinds of food dishes eaten
4.7.1 Dry main dishes
4.7.2 Liquid main dishes
4.7.3 Sauces
4.7.4 Vegetables
4.7.5 Desserts and snacks
4.7.6 Fruits
4.8 Home preservation of foods
4.9 Conclusion

5. Legumes Eaten
5.1 Types, frequency and quantity of legumes eaten
5.2 Sources of legumes eaten in the villages
5.2.1 Growing of legumes
5.2.2 Buying and selling of legumes
5.3 Storing of cowpea seeds
5.4 Methods of cooking and processing legumes
5.5 Types and quantities of legume food dishes
5.6 Consumption pattern of legume and legume dishes
5.7 Eating of legumes throughout the year
5.8 Liking of legumes and legume dishes
5.9 The attitudes to cowpeas
5.10 Accuracy of survey
5.11 Conclusion

6. The Food Eating Pattern in Northeastern Villages
PART TWO:
DEVELOPMENT OF COWPEA DISHES AND 7-DAY MENU FOR
VILLAGERS IN NORTHEASTERN THAILAND

7. Methods of Planning Diets

7.1 The developments in diet planning

7.2 Important factors in diet planning

7.2.1 The consumer

7.2.2 Nutritional requirements

7.2.3 Acceptability

7.2.4 Palatability

7.2.5 Food attributes

7.2.6 Monotony and food preference

7.2.7 Food compatibility

7.2.8 Meal patterns

7.3 Quantitative techniques used in diet planning

7.3.1 Linear programming in raw material selection

7.3.2 Menu planning by linear programming

7.3.3 Menu planning by integer programming

7.4 Choice of diet planning method for Northeastern Thailand

8. Development of Cowpea Dishes

8.1 Choice of cowpea variety used in the development of cowpea dishes

8.2 The selection and screening of cowpea dishes

8.3 The selected cowpea dishes

8.4 The formulation of cowpea dishes by linear programming

8.4.1 Organisation of data for the formulation

8.4.2 TEMPO input data preparation

8.4.3 The problem solution

8.5 The evaluation of the computerised recipes

9. Menu Planning by Linear Programming

9.1 Factors for consideration

9.1.1 The consumer

9.1.2 The meal pattern

9.1.3 The nutrient requirements

9.1.4 Acceptability of the menu

9.1.5 Food input for linear programming

9.1.6 Consumption quantity

9.2 Data collection

9.2.1 Nutrient composition

9.2.2 Cost

9.2.3 The consumption quantity

9.3 Linear programming model for menu planning for Northeastern Thailand

9.3.1 The initial model

9.3.2 The relaxed nutrient constraints model

9.4 Linear programming input

9.5 Linear programming output

9.5.1 The solution of relaxed nutrient constraint model - Menu 1

9.5.2 The solution of relaxed nutrient constraint with limit on liquid main dishes model - menu 2

9.6 Conclusion
10. Planning 7-Day Menu by Mixed Integer Programming 139
   10.1 TEMPO mixed integer algorithmic procedure 139
   10.2 Scheme for selection of specific number of dishes for the menu planning by mixed integer programming 141
   10.3 The meal pattern 144
   10.4 The revised data for input menu planning by mixed integer programming 145
      10.4.1 Food selection 145
      10.4.2 The nutrient composition 146
      10.4.3 The nutrient constraints 147
      10.4.4 The limit quantity on food intake 149
   10.5 Planning a weekly menu 150
   10.6 Trial running of mixed integer programming for menu planning 150
   10.7 Selection of 7-Day menu by mixed integer programming 153
   10.8 Menus for 7 days 154
   10.9 Conclusion 162

11. The 7-Day Menu for the Introduction 163

PART THREE:
INTRODUCTION OF COWPEAS IN A NUTRITIONALLY BALANCED MENU TO SIX VILLAGES IN KHON KAEN PROVINCE 166

12. Methods of Introducing New Foods 167
   12.1 The adoption of innovations 167
   12.2 Adoption in rural society 171
   12.3 Introduction of new foods 173
      12.3.1 Commercial methods of introducing new nutritional food products 174
      12.3.2 The delivery system of food aid for supplementary feeding programmes 177
   12.4 Nutritional education 179
      12.4.1 Nutritional education programmes 179
      12.4.2 Places and people used in nutrition education 180
      12.4.3 Methods used in nutrition education 182
      12.4.4 Effectiveness of nutrition education programmes 183
   12.5 Communication methods 185
      12.5.1 Types of mass communication 186
      12.5.2 The organisation of the communication programme 187
   12.6 Evaluation of nutrition programmes 189
      12.6.1 Evaluation indicators 190
      12.6.2 Evaluation methods 192
   12.7 Conclusion 194

13. The Methods Used in Introducing 7-Day Menu and Cowpeas to Six Villages 196
   13.1 Workplan 196
   13.2 The development of the Introduction models 197
   13.3 Designing the procedure for conducting the Introduction 204
      13.3.1 Group discussion 204
      13.3.2 Person contact 206
      13.3.3 Food party 206
      13.3.4 Cooking demonstration 207
      13.3.5 Video cooking demonstration 209
      13.3.6 Competition for best dish 210
13.3.7 Competition for best cook 211
13.3.8 Cooking at home 211

13.4 Village selection and method involved in personnel recruitment
13.4.1 The village selection 212
13.4.2 The group discussion leader selection 212
13.4.3 The "contact" person selection 212
13.4.4 Contacting the selected person 213
13.4.5 The sub-group discussion selection 212

13.5 The development of the evaluation method 213
13.5.1 Introduction 213
13.5.2 The collecting of data 214
13.5.3 The costing 217

13.6 Conducting introduction and evaluation in villages 217

14. The Response of Villagers to the 7-Day Menu and the Cowpeas 219
14.1 Awareness and Interest Stages 219
14.1.1 People aware and their initial interest 219
14.1.2 The diffusion rate of information 221
14.1.3 Knowledge at the food party 223
14.1.4 Comparison of knowledge of "sub group" and "food party group" 224
14.1.5 Conclusion for the Awareness and the Interest stage 228

14.2 Evaluation and Trial stage 230
14.2.1 The 7-Day menu, the acceptability and choice of dishes 230
14.2.2 The acceptability of the cowpea dishes 235
14.2.3 Cooking of the 7-Day menu 236
14.2.4 Cooking of cowpea dishes 238
14.2.5 Number attending cooking demonstration and taking part in the competition 238
14.2.6 Conclusion from the evaluation and trial stage 239

15. The Effect of the Total Introduction 241
15.1 The number of villagers who cooked the cowpea dishes 241
15.1.1 The total number 241
15.1.2 The rate of increase of the numbers of households who cooked the cowpea dishes 243
15.2 The cowpea dishes cooked by the villagers 245
15.3 Amount of cowpeas eaten before and after introduction 245
15.4 Knowledge and attitude to cowpeas at the beginning of the Introduction and at the end of the introduction 252
15.4.1 Knowledge of cowpeas 252
15.4.2 Growing of cowpeas 255
15.4.3 Eating of cowpeas 257
15.4.4 Opinions of cowpeas 259
15.5 The Costing of the Three Introduction Models 261
15.6 Conclusion 262

16. The Final Analysis of the Introduction of the 7-Day Menu and the Cowpeas 263

CONCLUSION 267
