A STUDY OF PHYSIOLOGICAL AND PRODUCTIVE DIFFERENCES BETWEEN
FLEECE WEIGHT SELECTED AND CONTROL ROMNEY SHEEP

A thesis presented
in partial fulfilment of the requirements
for the degree of

Doctor of Philosophy
in Animal Sciences
at
Massey University

Massey University Library. Thesis Copyright Form

Title of thesis: A study of physiological and productive differences
between fleece weight selected and control
Romney sheep.

ACKNOWLEDGEMENTS

Sincere thanks are extended to Dr. Hugh Blair for his patience during the supervision of this work and his support both in and out of academic circles. Dr. George Wickham is gratefully acknowledged for his supervision in Dr. Blair's absence and his unfaltering interest in the experimental subject. Prof. Rae also contributed many useful comments and I was particularly grateful for his suggestion of the infamous G-test, (Someday I will write a computer programme to do them and save my sanity), even if I may not have appeared so at the time. Prof. Anderson is thanked for his support and encouragement in professional matters and his tolerance of animal breeders who digress from the biometrical to the biological. No remarks would be complete without thanking Dr. Stuart McCutcheon for his advice and criticisms, his witticisms, and his genuine interest in students.

The departmental staff, especially, Merv and Merv, helped considerably to relieve the drudgery of endless midside samplings, washings etc.,etc.. The technical and support staff were always cheerful and supportive of "yet another mid-side sampler" who was voted "most likely to be late" every 28-days. Mr. Mark Carter, wherever he may be, was a real help in setting up computerized data recording and other "technological timesaving". The staff of the APU are acknowledged for the care and maintenance of my experimental sheepies on weekends and throughout the course of my extended indoor trial.

The graduate students in Animal Science formed an exciting and international group of friends. I thank them for helping me on rainy days of faecal samplings, endless days of washing wool samples, and for showing me the ropes of animal experimentation. I truly believe that I have never been as happy as I was during my time in Palmerston North.

Special thanks are extended to Heather Meikle and Ewen Cameron. Heather was always willing to explain "wool things" to me and was a long lost friend come home. Ewen could kill spiders. Coby Hoogendoorn is thanked for her assistance in doing the seasonal pasture cuts and for being just plain helpful. The other students in animal science may be gone, but they are not forgotten. My time at Massey University was enriched through their acquaintance and I am grateful for my ever increasing world network of friends.

The financial backing of Agriculture Canada's "Young Scientist Training Program" was greatly appreciated in allowing me to study and visit this beautiful country.

I must also thank my parents for their support, if not understanding, of my pursuits. This thesis is dedicated to the loving memory of my mother, Gwen McClelland, who passed away before its completion. This one's for you Gwennie.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS.....	i
1. INTRODUCTION.....	1
2. REVIEW OF LITERATURE.....	3
2.1 LIVEWEIGHT AND INTAKE.....	3
2.2 WOOL GROWTH EFFICIENCY.....	4
2.2.1 Diet selection.....	5
2.2.2 Digestive ability.....	6
2.3 UTILISATION OF AMINO ACIDS FOR WOOL GROWTH.....	7
2.3.1 Sulphur content of wool.....	7
2.3.2 Metabolism of sulphur-containing amino acids.....	8
3. MATERIALS AND METHODS.....	11
3.1 DESCRIPTION OF THE EXPERIMENTAL FLOCKS AND THEIR MANAGEMENT.....	11
3.2 ANALYTICAL TECHNIQUES EMPLOYED.....	12
3.2.1 Data collection and correction.....	12
3.2.3 Tests of assumptions in MANOVA.....	14
4. THE PERFORMANCE OF FW AND C RAM HOGGETS FED LUCERNE BASED DIETS WITH AND WITHOUT FORMALDEHYDE-PROTECTED PROTEIN.....	16
4.1 INTRODUCTION.....	16
4.2 MATERIALS AND METHODS.....	17
4.2.1 Experimental plan.....	17
4.2.2 Feeding.....	18
4.2.3 Wool growth rate.....	19
4.2.4 Liveweight.....	20
4.2.5 Digestability of DM and N.....	21
4.2.6 Analytical methods.....	21
4.3 RESULTS AND DISCUSSION.....	23
4.3.1 Apparent digestive ability.....	24
4.3.2 Liveweight and liveweight gain.....	25
4.3.3 Urine volume.....	26
4.3.4 Wool growth.....	27
4.4 CONCLUSIONS.....	31
5. SEASONALITY OF WOOL AND BODY GROWTH.....	32
5.1 INTRODUCTION AND REVIEW OF LITERATURE.....	32
5.1.1 Nutrition and climatic factors.....	33
5.1.2 Hair and wool growth cycles.....	40
5.1.3 Genetic differences in response to season and nutritional factors.....	45
5.1.4 Hormonal effects.....	51
5.1.5 Role of the Pineal gland in wool growth cycles.....	57
5.1.6 Measuring the seasonality of wool growth.....	63
5.1.7 Summary.....	66
5.2 MATERIALS AND METHODS.....	66
5.2.1 Experimental plan.....	66
5.2.2 Sampling routine.....	67
5.2.3 Sample processing and calculated variables.....	68
5.2.4 Statistical methods.....	69

5.3	RESULTS AND DISCUSSION.....	70
5.3.1	Liveweight.....	70
5.3.2	Wool growth.....	72
5.4	CONCLUSIONS AND RECOMMENDATIONS FOR FURTHER STUDY...	91
6.	A COMPARISON OF INTAKE AND EFFICIENCY ON PASTURE.....	93
6.1	INTRODUCTION.....	93

List of Tables

4.1	Least squares means of performance traits of FW and C rams fed lucerne diets.	
a)	Preliminary period, P1 (1000g/d lucerne presscake).....	29
b)	Chopped lucerne (1400g/d), P3.....	29
c)	P2, ± Formaldehyde protected casein.....	29
5.1	Least squares means(LSM), standard errors, percentage advantage $((FW-C)/C)*100$. and significance of monthly liveweight, weaning weight (WW) and post shearing liveweight (PSLW) by selection line.....	80
5.2	Seasonal wool growth of C and FW hoggets: least squares means (LSM), standard errors, significance, and percentage advantage $((FW-C)/C)*100$.	
a)	Clean wool growth (g/day).....	81
b)	Length per day (mm/day).....	81
c)	Average fibre diameter (μm).....	82
5.3	Characteristics of the seasonal pattern of wool growth, greasy fleece weight (GFW), clean fleece weight (CFW), greasy lamb fleece weight (LFW) and average fibre diameter (FD) in C and FW sheep. Least squares means, standard errors, and percentage advantage $(FW-C)/C)*100$	89
5.4	Pooled (where homogeneous) or within line (C/FW) correlations between measures of staple strength and wool growth characteristics (corrected for DB, BR, DA and SEX).....	90
6.1	Measures of pasture, liveweight and intake by season and line	
a)	Pasture availability and digestability.....	105
b)	Monthly initial liveweight.....	105
c)	DMI and DDMI.....	105
6.2	Production and productive efficiency by line and season	
a)	ADG and LWGEFF.....	106
b)	CWOOL and CWOOLEFF.....	106
7.1	The liveweight of ewe hoggets (kg)	
a)	Year, birth rank, dam age, selection line and oestrus status least squares means.....	134
b)	Repeated measures analysis of liveweight.....	135
7.2	Liveweight gain of ewe hoggets (kg).	
a)	Year, birth rank, dam age, selection line and oestrus status least squares means.....	136
b)	Repeated measures analysis of seasonal liveweight gains.....	137

c) Repeated measures analysis of monthly liveweight gains during the breeding season.....	138
7.3a Percentage of ewe lambs in oestrus by selection line.....	139
7.3b Analysis of deviance for yes/no display of oestrus as a hogget.....	139
7.4 Clean hogget fleece weight (CFW) and winter wool growth (June g clean wool/head/day) in cyclic and acyclic FW and C hoggets.....	140
7.5 Two-tooth lambing performance of ewes which were either cyclic or acyclic as hoggets in FW and C lines (n).....	140
8.1 Number of hoggets tested, and two teeth re-tested for staple strength in the fleeceweight-selected (FW) and Control (C) lines.....	170
8.2 Description of hand-pull grades for staple strength.....	170
8.3 Selection line least squares means, standard errors, and significance for staple strength, hand-pull grade and wool growth characteristics.....	172
8.4 Pooled (where homogeneous) or within line (C/FW) correlations between measures of staple strength and wool growth characteristics (corrected for DB, BR, DA and SEX).....	176
8.5 Regression coefficients, R^2 values, and the significance of selection line differences in staple strength following preadjustment for wool growth characteristics.....	177
8.6 Least squares means for staple strength and wool growth characteristics for each hand pull grade class.....	182a

List of Figures

4.1	Mean shoulder greasy wool growth of fleece weight selected (FW) and control (C) rams during uniform feeding (1kg/d) in P1, casein supplementation in P2 and uniform feeding (1.4kg/day) in P3.....	30
5.1	Seasonal patterns of wool growth in FW and C hoggets.	
	a) Seasonal variation in clean wool growth (g/day).....	83
	b) Seasonal variation in length per 28 days (mm).....	84
	c) Seasonal variation in fibre diameter (μm).....	85
5.2	Seasonal patterns of wool growth in FW and C ram and ewe hoggets.	
	a) Seasonal variation in clean wool growth (g/day).....	86
	b) Seasonal variation in length per 28 days (mm).....	87
	c) Seasonal variation in fibre diameter (μm).....	88
7.2	Calendar of events for ewe hoggets.....	133
8.1	Schematic representation of the Hounsfield tensometer and load recording equipment.....	171
8.2	Percentage within line distributions in FW and C hoggets.	
	a) Mean staple strength.....	173
	b) Hand pull grade.....	174
8.3	Subdivision of the total sums of squares for measures of staple strength.....	175
8.4	Distribution of FW and C hoggets for MB, MLFD, MLLPD and MLCPD.....	178
8.5	Mean staple strength and the proportion of fleece weight selected (FW) and control (C) hoggets in standard deviation (SD) classes for pairs of wool growth characteristics	
	a) FDAMP and MFD.....	179
	b) LLPD and LFD.....	180
	c) LPDAMP and FDAMP.....	181
	d) LPDAMP and MFD.....	182

List of Plates

5.1 Dye-banded staples in relation to the midside patch..	79
6.1 Faecal collection bags (with liners) and harnesses..	103
6.2 Harnessed rams returned to grazing.....	104
