Investigating the food habits and beliefs of pregnant women living in rural Bangladesh

A thesis presented for the partial fulfilment of the requirements for the

Degree of

Master of Science

In

Human Nutrition

At Massey University, Auckland

New Zealand.

Moniek Kindred

2013
To my Oma, whose courage and strength has always been such an inspiration to me and represents the resilience of women worldwide. I miss you and love you; rest in peace.
ABSTRACT

The maternal diet plays a vital role in foetal growth and development, which continues to influence the infant’s health status throughout their life and future generations. In developing countries such as Bangladesh, the maternal diet is limited and malnutrition rates are high, most often due to underlying economic, cultural, political and environmental factors that determine complex human behaviours, including food consumption practices.

The aim of this study was to use a mixed method approach to investigate food consumption practices during pregnancy and to explore the role of traditional eating habits and taboos in the maternal diet in rural Bangladesh.

Individual interviews were conducted with pregnant women (n=43) from nine villages in Pirganj upazila to collect demographic and individual dietary diversity data. Eight focus groups were conducted, which commenced with the compilation of a harvest calendar (‘ten seed method’) followed by a semi-structured discussion about food habits and beliefs whilst pregnant. Additionally, six women completed a photographic participant observation to enrich research findings.

The women’s ages ranged between 15-42 years, with 25 belonging to Ethnic Minority (Adivasi) groups and 18 being Bengali. The mean dietary diversity score was 5.9 and the mean food variety score was 7.2, indicating poor diversity. Adivasi women consistently had lower dietary diversity scores and lower socio-economic status than Bengali women. Cultivated crops were rice, jackfruit and mango, with rice being the main crop, harvested twice a year, and consumed daily by all women. Women’s social status, cultural customs and high poverty levels prevent them from achieving a diet that includes a varied diet during pregnancy. Most women consume fish 1-2 times a week and meat once every 2-3 months. Taboos regarding pregnancy were variable between groups. Examples include: food preparation during an eclipse causing ear/mouth deformities in their babies; a small pregnancy belly being desirable to prevent difficult childbirth; avoiding pineapple and green papaya because it can cause miscarriage.
Eating habits and taboos are engrained into the Bangladeshi culture and poor practices often result in pregnant women’s insufficient consumption of a varied diet. The findings highlight the importance of understanding the relationship between underlying factors of malnutrition when planning sustainable improvements to health and wellbeing. These research findings were successfully incorporated into the Optimal Nutrition During Pregnancy project, which is currently being implemented in the Pirganj community.
ACKNOWLEDGEMENTS

This thesis and the opportunities, experiences and learning’s which came with it, would not have been possible without the cooperation and commitments from World Vision. I would like to wholeheartedly thank World Vision New Zealand for committing to and providing funding for this project. Briony Stevens, your advice and support was much appreciated and I hope our friendship continues to grow. Let this be the first project in a long relationship between Massey University and World Vision New Zealand.

Thank you to all those in Bangladesh, who I worked with and who gave support to this research; from the village facilitators up to those at national level. I would like to especially thank Chandan Z Gomez, Francis P Nath, and all staff members at the Pirganj ADP for your continuous support and enthusiasm for this research study.

I am extremely grateful to the 43 participants and the Pirganj community who so willingly expressed their perceptions and opened up their culture and homes to me. Without them the work presented in this thesis would not have been possible.

I am thankful to my family (Mum, Dad, Gina and Chris), without whom I would not be where I am today. Thank you for your constant support, words of encouragement and never ending proof reads.

Above all I would like to thank my supervisors whose knowledge and expertise complemented each other perfectly. Thank you to Rozanne Kruger for opening my eyes to the fascinating world of qualitative research and your meticulous attention to detail. Thank you to Cathryn Conlon, for your diverse perspectives and your constant positivity and excitement. I am extremely grateful to you both for your guidance, wisdom and support through this both academic and person learning experience.

BENGALI TRANSLATIONS AND TERMINOLOGY

Adivasis – People belonging to an Ethnic Minority group in Bangladesh.

Aloo – Potato

Ayurvedic medicine – Local medicine based on herbs, roots and metals which originated in India

Baht – Rice

Baja – Woman who cannot conceive a baby

Bashi foods – Foods cooked on previous day

Batul foods – Foods which are taboo to eat after delivery (e.g. hilsha fish, beef, shrimp fish and mutton)

Bhorta – Mash

Caffi – Cabbage

Chanachur – Bhuja/bombay mix

Curd – Yoghurt

Dahl – Lentil

Dudh – Milk

Dudhbaht – Rice cooked in milk

Ekadashi – Hindu fasting period

Fhata – Genetic skin disease similar to itchyosis

Gourd – A plant of the ‘Cucurbitaceae’ family which includes cucumbers, pumpkins and melons.

Gur – Molasses

Guti guti – When baby is born with bumpy skin, similar to a rash

Hapani – Pneumonia

Jhar Fuk – Splashing blessed water over the face
**Jujube** – Indian Baroi fruit

**Khir** – Boiled milk and sugar product

**Khoi** – Dry fried paddy (unprocessed rice)

**Kobiraj** – Drinking blessed water

**Manoth** – The act of making a sacrifice and offering a prayer at a place of worship to be able to conceive a baby

**Muri** – Puffed rice

**Nahla** – Dribbling

**Nasta** – Snack

**Payesh** – Luxurious dessert commonly made from rice, cardamom, raisins, gur and milk

**Piazu** – Deep fried lentil mixture

**Upavas** – Hindu fasting period

**Ramadan** – The ninth month of the Muslim calendar when Muslims observe a month of fasting during daylight hours

**Rice fry** – Dry fried rice

**Roja** – Muslim fasting period

**Roti** – Bread

**Shaad** – Ceremony when women are provided with food during the seven month of pregnancy

**Shaak** – Green leafy vegetables

**Sim** – Green bean

**Singara** – Bangladeshi samosa

**Tel Pitha** – Fried sweet bread, similar to doughnuts

**Tor kari** – Vegetable curry (sometimes with the addition of egg, fish or meat)
