STUDIES OF PRODUCTIVE TRAITS IN A NEW ZEALAND ROMNEY FLOCK:
THE EFFECT OF SOME ENVIRONMENTAL FACTORS,
HERITABILITIES AND REPEATABILITY

A thesis presented in partial fulfilment of the requirements for
the degree of Master of Agricultural Science
in Animal Science
at
Massey University

ROGER SCOTT LUNDIE
1971
ACKNOWLEDGEMENTS

The candidate is greatly obliged for the guidance of his supervisor, Professor A.L. Rae.

Special thanks are due to Mrs. K.L. Thatcher, Mrs. P.O. Kirkland, Mr. B. Thatcher and Mr. C.G.R. Muir for their assistance in compiling the data. Grateful acknowledgement is made to the staff of the Massey University Computer Unit and the Massey University Library for their willing help.

Thanks are also extended to Miss S.T.M. Boynton for her assistance during the preparation of this thesis.

This work was aided by a New Zealand Wool Board Scholarship and for this the candidate wishes to express his thanks.

## List of Tables

vi

## Chapter

I. Introduction

1

II. Review of Literature

5

A. Weaning Weight

5

1. Environmental effects

5

   (i) The magnitude of environmental effects

5

   (ii) Interactions between main environmental effects

10

   (iii) Partitioning the components of variance

11

2. Estimates of heritability and repeatability

12

3. Summary

14

B. Hogget Greasy Fleece Weight

15

1. Environmental effects

15

   (i) The magnitude of environmental effects

15

   (ii) Partitioning the components of variance

15

2. Estimates of heritability and repeatability

15

3. Summary

19

C. Reproductive Rate

21

1. Introduction

21

2. Environmental effects

22

(iii)
(i) The magnitude of environmental effects
   (a) Age of ewe effect
   (b) Date of lambing within the lambing season
   (c) Effect of the body weight of the ewe
   (d) Year effect
3. Partitioning the components of variance
4. Estimates of repeatability and heritability
   (i) Repeatability
      (a) Barrenness
      (b) Number born per ewe joined
      (c) Number weaned per ewe joined
      (d) Number born per ewe lambing
      (e) Number weaned per ewe lambing
   (ii) Heritability
      (a) Barrenness
      (b) Number born per ewe joined
      (c) Number weaned per ewe joined
      (d) Number born per ewe lambing
      (e) Single or multiple births
      (f) Number weaned per ewe lambing
5. Summary
D. WEIGHT OF LAMB WELTED
III. SOURCE OF DATA
A. HISTORY AND MANAGEMENT OF THE FLOCK
B. DATA AND DATA COLLECTION
C. THE CASE OF THE INFERTILE RAMS USED IN 1962
(iv)
IV. THE MEASUREMENTS USED IN THE STUDY 51
   A. CORRECTION FACTORS FOR ESTIMATING WEIGHT OF LAMB WEANED 51
   B. THE MEASUREMENTS OF REPRODUCTIVE RATE 53

V. METHOD OF ANALYSIS AND RESULTS 55
   A. ESTIMATION OF ENVIRONMENTAL EFFECTS 55
      1. Least squares model 55
      2. Solution of equations 62
      3. Testing for an interaction between Age of dam and Birth and rearing effect for weaning weight and hogget fleece weight 65
   4. Analysis of variance of environmental effects and partitioning the variance components 67
   5. Results and discussion 69
   B. ESTIMATION OF REPEATABILTY 75
      1. Introduction and method of analysis 75
      2. Results and discussion 75
   C. ESTIMATION OF HERITABILITY 79
      1. Introduction and method of analysis 79
      2. Dam-offspring relationship method 80
      3. Paternal half-sib method 31
      4. Results and discussion 84

</table>
Matrix 5: Reduced least-squares equations necessary for the analysis of variance of the weaning weight year effect

19a Magnitude of environmental effects as deviations from the mean

19b Magnitude of environmental effects as deviations from the mean

20a Analysis of variance of weaning weight and fleece weight

20b Analysis of variance of characters measuring reproductive rate

21a The magnitude of effects between subclasses of environmental factors

21b The magnitude of the effect of different ages of dam on various measures of reproductive rate

22 The variance components as a percentage of total variance

23 Repeatability estimates

24 Heritability estimates by paternal half-sib method

25 Heritability estimates for N.L.W. by dam-offspring regression

26 The inverse of the reduced least-squares equations for weaning weight for all effects except the set for years

27 The analysis of variance with the HS expectations

28 Variance components as a percentage of total variance

29 $\hat{a}_{in}$ diagonal element and $\hat{b}_k$, $\hat{c}_1$, $\hat{a}_j$, $\hat{d}$ and RHM segment of the $\hat{a}_{in}$ equations of the full (sires included) weaning weight

30 The $\hat{b}_k$, $\hat{c}_1$, $\hat{a}_j$, $\hat{d}$ and RHM segment of the $b_k$, $c_1$, $a_j$ and $d$ equations of the full (sires included) weaning weight model

31 Full (sires included) weaning weight matrix with $\alpha$, $t_1$ and $s_m$ equations absorbed
