THE EFFECTS OF SPORT PARTICIPATION ON CHILDREN’S EMOTIONAL WELL-BEING

A thesis presented in partial fulfilment of the requirements for the degree of Master of Arts in Psychology at Massey University

Sarah J. Donaldson

1997
ABSTRACT

Examined the relationship between level of children's sports participation and emotional well-being including self-reported emotional and behavioral problems, self-concept, achievement motivation and participation motivation. Data was collected from 203 Form One and Two students from five schools using a multitrait-multimethod assessment methodology. Information was obtained concerning participation in and perceptions about sporting activities. Emotional well-being was assessed by the Youth Self-Report (Achenbach, 1991) and the Self-Perception Profile for Children (Harter, 1985). The study found that increased levels of sports participation had a positive relationship with aspects of emotional well-being particularly self-concept. Results also showed children with increased perceptions of sport-related competencies reported significantly fewer emotional and behavior problems than children who were, by an external standard (i.e., teacher rating of athletic competence), actually competent at sport. The study replicated and extended research in this area. Caveats are discussed including issues relating to inferring a causal relationship between sports participation and emotional well-being. Future research and methods for studying the psychological effects of sport are recommended.
ACKNOWLEDGEMENTS

The present study would not have been possible had I not had the assistance and guidance of my supervisor Dr Kevin Ronan. I would like to express my appreciation to him for his enthusiasm and encouragement which inspired me throughout my research period and who gave me the confidence to persevere even during difficult times.

I would like to dedicate this paper to Boss Hemi, whom I worked with as a youth worker in Masterton. His work in the community was an inspiration to me, as was the continuous support both he and my employer John Roberts gave me. It was from this time that the idea for my thesis emerged.

I would also like to thank the principals, staff and pupils of the Masterton schools who were involved in the study. The response I received far exceeded my expectations and the enthusiasm I encountered was very rewarding.

Lastly I would like to say a special thank you to my mother for her love and support throughout my studies.
