ABSTRACT

Down syndrome is a lifelong condition which impacts each family member in unique ways. Yet, with numerous studies focused on parental coping, little is known about the meanings siblings attach to the relationship they share. This study aims to investigate the personal experiences and coping strategies of younger siblings of individuals with Down syndrome. Three siblings aged between 17 and 22 years were interviewed to gather data on their experiences and coping strategies. The interviews were recorded and transcribed for analysis. Data was analysed using Thematic Analysis. Findings suggest four major themes and eight emotional states. The four themes identified are Blurred ordinal roles, Growth, Coping with society’s perceptions and Future plans. The eight emotional states identified are feelings of Loss, Guilt, Uncertainty, Embarrassment, Protectiveness, Denial, Acceptance, Gratitude and Admiration. The results report an overall positive experience between siblings. Challenges related to the lack of public awareness, social stigma and functioning levels of siblings were raised. Siblings reportedly engaged in both, emotion-focused and problem-focused coping strategies. Variables such as family size and sibling’s level of functioning were found to account for some of the differences across the case studies. The discussion provides suggestions on the practical application of findings, limitations and recommendations for future research.
ACKNOWLEDGEMENTS

My sincere gratitude goes out to all the people who have helped me through the journey of completing this thesis:

Heartfelt thanks to Dr. Keith Tuffin who took on the role as my main supervisor for this research. His valuable comments, patience, expertise and guidance have benefitted me tremendously on this learning journey.

Dr. Tatiana Tairi, my co-supervisor, for her comments, encouragements and support.

Auckland Down Syndrome Association (ADSA) for their immense support in assisting with the advertisement and recruitment of participants. ADSA’s support has contributed significantly to the success of this project.

My partner, who has accompanied me on this journey, thank you for being so caring and always encouraging me to achieve more. Thank you for staying up late with me as I study and providing me with opportunities to relief stress. Most of all, thank you for the cups of coffee, and your unwavering love, support and belief in me.

Friends and family, near and far, who have always encouraged and motivated me through the difficult parts of this journey. I am grateful for the support they have shown me and the words they have shared with me. I would not have reached this point without them.
