Participation of women in development

With particular emphasis on people participation in the Fiji pine forestry sector

A Theses submitted in partial fulfilment of the degree of Master of Philosophy

By

Felix Fellmann
Development Studies

Massey University, Palmerston North, New Zealand
July 1993
Abstract

The study examines the degree and authenticity of women's and men's participation at four levels of the development arena: The development organisations of Development Assistance Countries (DAC), the New Zealand Development Cooperation Division of the Ministry of External Relations and Trade (MERT), the Fiji Pine Limited and the two participating case study villages of the Fiji Pine project; Vakabuli and Tau. The thesis starts with the premise that the degree of participation depends on the question: who controls the central institutions of a given society?

For the development organisations of the Development Assistance Countries, strongly positive, significant correlations were seen between the Independent variable of the Proportion of Women Parliamentarians and the dependent variables of the UNDP Gender Index, Proportion of GNP spent on Development cooperation and the Proportion of Development Budget spent on Women in Development. These results present strong evidence that a high proportion of women power-holders are influential in improving development solidarity and gender equality at the policy level.

Compared to most Development Assistance countries, nominal women's representation in the Ministry of External Relations and Trade of New Zealand's Development Cooperation Division was above average with an increasing number of women in mid-hierarchy positions. Overall, the study of the Development Cooperation Division found a low level of gender awareness and a high variability of conceptual understanding of participation among the survey participants.

Within the organisation of Fiji Pine Limited significant inequality was found in regard to women's access to training. Furthermore, as was the case with the Development Cooperation Division, the degree of gender awareness was low and the conceptual understanding of participation highly variable among the survey participants.

The village case study found that for women, patriarchy is most strongly pronounced during adolescent, early marriage and the reproduction phase, and that patriarchal control reduced with age. Women were found to participate to a low degree, and in a passive mode in project implementation. While women had access to most of the project's inputs and benefits, they practically never had control over them.
Overall, the men and women of Vakabuli and Tau villages were participating in a passive mode which was characterised by minimal information flow, little project related knowledge, little project co-responsibility and inadequate conflict solving structures. The study found that women could be more actively involved in the tree nurseries, tree planting and tree weeding in the area of independent contractors. The second avenue for active women’s participation was professional women extension workers, forestry managers and project administrators.

Overall, the thesis confirmed the view that the degree of participation in development is a function of the importance of the roles played by gender in their society’s central institutions.
Acknowledgements

I am very grateful to my supervisors Dr. Kirsten Lovelock and Associate Professor Dr. Croz Walsh for their valuable assistance during the whole process of preparing this thesis. I wish to thank my wife Vreni and the children Martin, Lukas, Christina and Clemens for their generosity in accepting time limitations during the last couple of months and for facilitating the field research in Fiji. The field work could not have been so fruitful without their help.

I am also extremely grateful to the staff of the Fiji Pine Limited, particularly to Naca Yalimaitoga, Mosese Toganivalu and Charli Baba. The research would not have been possible without their help. I also wish to express my thanks to all the people of the case villages of Vakabuli, Tau and the forest camps Nabou and Lololo. A large proportion of the research result is theirs, and I sincerely hope it will be useful to them.

I am thankful to Margaret Lowe, John Claasen and Kevin Clark of the Ministry of External Relations and Trade (MERT), for their help in the Initial stages of the thesis. Thank is due to Christine McArthur and Ross Cassels who spent their valuable time proof reading my drafts. Without their help the thesis would sound even more German! Joe Schlierike from the copying room at the Social Science Faculty was of great assistance during the last stages of completing the thesis, and I would like to express my thanks to her.

Finally, I wish to thank INTERCOOPERATION, Swiss Organisation for Development and Cooperation who assisted my studies at Massey University, and INTERTEAM, Swiss Organisation for Voluntary Development Cooperation who, in the last stages of completing the thesis offered me an interesting job which greatly motivated me to complete the thesis efficiently.
