R^2 and Stock Price Informativeness: New Empirical Evidence

A thesis presented in fulfilment of the requirements for the degree
of

Doctor of Philosophy

in

Finance

at Massey University

Palmerston North, New Zealand

Wei Hao

2015

ACKNOWLEDGEMENT

Pursuing and completing my PhD project has been a long journey marked with joy, challenge, hardship, and bitterness. It was a painful but enjoyable experience I will never forget. This project could not be finished without the help, support, and encouragement of many people. First of all, I would like to express my sincere appreciation to my supervisor, Dr. Jeff Wongchoti, who was my primary contact whenever I encountered any problems. His always being friendly, patient, and enthusiastic, as well as his guidance, inspiration, and encouragement was a great motivation for me during the tough time of my PhD program. I would also like to thank to my co-supervisor, Professor Martin Young, who offered me the opportunity to enter into the PhD program and accepted me as his PhD student in the first place. His patience, genuine caring, and professional guidance were extremely valuable to me throughout my PhD program. I am also very grateful to my second co-supervisor, Associate Professor Andrew Prevost. I would like to express my deep and sincere gratitude for all his insightful discussions and valuable advice—especially for his great support and suggestions regarding the empirical part of my research.

I would also like to thank Dr. Jianguo Chen for some of his casual computer programming advice, Ms. Fong Mee Chin for her help in data collection, and Mr. Cameron Rhodes for his great support regarding technical issues. Special thanks also goes to my

friend Xiang He, who spent lots of his personal time helping me with SAS programming problems.

My PhD pursuit could not have been completed without the support, love, and encouragement of my family. Words cannot express my gratitude and feelings to my parents, Zhenfang Hao and Guoli Liu. Their endless love, unselfish support, and faith in me enabled me to overcome any difficulties and get through hard times. My gratitude extends to my mother-in-law, Nina Zhang, for her unconditional support, understanding, and encouragement throughout my PhD journey. Finally, to the three most important men in my life—to my beloved husband, Jibin Zhang, and to my two lovely children, Eric and Dylan—your love, understanding, and support have been my source of strength. You are my sunshine and bring happiness to my life. I love you so much, always and forever.

This thesis is dedicated to my parents, my husband, and my children. Thank you with all my heart for always being there by my side.

Table of Contents

ACKNOWLEDGEMENT	iii
CHAPTER ONE: INTRODUCTION	3
1.1 Background and Motivation	4
1.2 Debate on R^2 Interpretation	8
1.3 Overview of the Three Essays	12
1.3.1 Essay One: R^2 and market response to analyst recommendation revisions	12
1.3.2 Essay Two: R^2 and the corporate signaling effect	14
1.3.3 Essay Three: Does R^2 mean more or less informative stock price? Evidence from bond market	16
1.4 Structure of the Thesis	18
CHAPTER TWO: ESSAY ONE	19
Abstract	20
2.1 Introduction	21
2.2 Literature Review: Analyst Recommendations and New Information	23
2.3 Hypotheses Development	27
2.4 Data and Methodology	29
2.4.1 Analyst recommendations and R^2	29
2.4.2 Empirical Methodology	33
2.5 Empirical Results	36
2.5.1 Transparency and information asymmetry characteristics across R^2 subsets	36
2.5.2 Abnormal return, trading volume, and return volatility across R^2 subsets	40
2.5.3 Multivariate regression analysis	48
2.5.4 Multivariate regression analysis: robustness check	56
2.5.5 Abnormal bid-ask spread and R^2	57
2.6 Conclusions	62
CHAPTER THREE: ESSAY TWO	65
3.1 Introduction	67
3.2 Literature Review of Dividend Signaling Effect	71
3.3 Hypotheses Development	74
3.4 Data and Methodology	75
3.4.1 Measuring a firm's R^2 and group categorization	75
3.4.2 Sample selection	78

3.4.3 Measuring abnormal returns of quarterly dividend change announcements conditional on R^2	83
3.4.4 R^2 and abnormal returns of quarterly dividend change announcements: regression analysis	85
3.4.5 The relationship between current dividends and future earnings conditional on R^2	87
3.5 Empirical results	89
3.5.1 Do prices of low R^2 stocks display stronger reaction to dividend change announcements?	89
3.5.2 R^2 and price reaction to dividend change announcements: regression analysis	98
3.5.3 Do changes in current dividends of lower R^2 stocks provide better indication about the firms' future prospects?	102
3.6 Conclusion	106
CHAPTER FOUR: ESSAY THREE	109
4.1 Introduction	111
4.2 Literature Review of bond pricing	115
4.3 Hypotheses Development	119
4.4 Data and Methodology	122
4.5 Empirical Results	130
4.6 Robustness Check	148
4.7 Conclusion	154
CHAPTER FIVE: CONCLUSION	158
5.1 Essay One: R^2 and market response to analyst recommendation revisions	159
5.2 Essay Two: R^2 and the corporate signaling effect	159
5.3 Essay Three: Does R^2 mean more or less informative stock price? Evidence from bond market	160
