

A STUDY OF SEED PRODUCTION
IN
'GRASSLANDS RUANUI' PERENNIAL RYEGRASS (LOLIUM PERENNE L.)
'GRASSLANDS KAHU' TIMOTHY (PHLEUM PRATENSE L.)
AND PRAIRIE GRASS (BROMUS UNILOIDES H.B.K.)

(APPENDICES ONLY)

A Thesis Presented in Partial Fulfilment
of the Requirements for the Degree of
Doctor of Philosophy at
Massey University
New Zealand

by

Murray John Hill
November 1971

LIST OF APPENDICES

1. Dates of grazing, nitrogen application and general management of field trial.
2. Mean tiller densities per row foot.
3. Stages of reproductive development - ryegrass and prairie grass.
4. Percentage of reproductive tillers observed following apical dissection.
5. Mean measurement of apex length and distance of internodal elongation.
6. Percentage distribution of heads produced in each emergence group according to month of tiller origin (1966, 1967).
7. Data on selected components of seedheads in emergence groups (1966, 1967).
8. Results of analysis of variance between means of treatment and emergence groups (1966, 1967).
9. Distribution of timothy heads in arbitrary head length categories (1966, 1967).
10. Percentage of seedheads with anthers exserted at each observation date (1966, 1967).
11. Anthesis and seed development data in different regions of timothy heads.
12. Technique for determination of seed chlorophyll and anthocyanin content.
13. Variation in seed moisture content during seed development.
14. Changes in individual weight components during seed development.
15. Mean weight of 1000 seeds developed from heads in different emergence groups.
16. Percentage of heads in different colour categories at successive harvest dates.
17. Percentage of seeds in different colour categories at successive harvest dates.
18. Changes in chlorophyll and anthocyanin content during seed development.
19. Data on onset of germination capacity - perennial ryegrass, timothy and prairie grass.
20. Germination capacity of seeds from heads in different emergence groups.

21. Seed yield - perennial ryegrass, timothy and prairie grass (1966).
22. Seed yield - perennial ryegrass, timothy and prairie grass (1967).
23. Relationship between seed yield and germination capacity at different harvest periods following anthesis depending on harvesting method (1966).
24. Relationship between seed yield and germination capacity at different harvest periods following anthesis depending on harvesting method (1967).
25. Daily anthesis data - perennial ryegrass (days 1 to 12).
26. Correlation matrix - perennial ryegrass.
27. Daily anthesis data - prairie grass (days 1 to 6).
28. Correlation matrix - prairie grass.
29. Average length of time individual florets remained open - prairie grass.
30. Percentage of seeds developed from florets open on different days and harvested at intervals up to 30 days after anthesis.
31. Percentage germination of seed developed from florets open on different days and harvested at intervals up to 30 days after anthesis.

APPENDIX I

DATES OF GRAZING, NITROGEN APPLICATION AND GENERAL MANAGEMENT OF FIELD TRIAL

	<u>Prairie Grass</u>	<u>Perennial Ryegrass</u>	<u>Timothy</u>
Nitrogen	26.5.66	26.5.66	26.5.66
Inter-row cultivation	8.6.66	8.6.66	8.6.66
Nitrogen	14.6.66	14.6.66	14.6.66
Nitrogen	5.7.66	5.7.66	5.7.66
Grazing	2.8.66 (7.6)	3.8.66 (8.6)	3.8.66 (6.8)
Nitrogen	9.8.66	9.8.66	9.8.66
Inter-row cultivation	19.8.66	19.8.66	19.8.66
Weed Control 'Embutox'	20.8.66	20.8.66	20.8.66
Grazing	15.8.66 (7.2)	24.8.66 (9.6)	30.9.66 (11.4)
Nitrogen	5.9.66	5.9.66	5.9.66
Insecticide 'Disyston'	10.10.66	10.10.66	10.10.66
Grazing	26.2.67 (192.0)	26.2.67 (192.0)	-
Inter-row cultivation	6.3.67	6.3.67	-
Potassic superphosphate (all treatments)	6.3.67	6.3.67	-
Nitrogen	6.3.67	6.3.67	-
Nitrogen	16.4.67	16.4.67	16.4.67
Grazing	26.4.67 (48.2)	26.4.67 (48.2)	26.4.67 (48.2)
Potassic superphosphate (all treatments)	-	-	18.4.67
Nitrogen	8.5.67	8.5.67	8.5.67
Inter-row cultivation	8.5.67	8.5.67	8.5.67
Grazing	18.5.67 (100.0)	18.5.67 (100.0)	18.5.67 (100.0)
Grazing	21.6.67 (86.2)	21.6.67 (86.2)	21.6.67 (86.2)
Nitrogen	21.6.67	21.6.67	21.6.67
Grazing	25.7.67 (92.6)	25.7.67 (100.0)	25.7.67 (110.4)
Nitrogen	27.7.67	27.7.67	27.7.67
Inter-row cultivation	6.8.67	6.8.67	6.8.67
Nitrogen	15.8.67	15.8.67	15.8.67
Grazing	-	-	-
Inter-row cultivation	26.9.67	26.9.67	26.9.67
Grazing	-	-	5.10.67 (98.2)
Insecticide 'Disyston'	5.10.67	5.10.67	5.10.67
Nitrogen	-	-	6.10.67
Nitrogen	26.1.68	26.1.68	-
Grazing	23.2.68 (180.0)	23.2.68 (180.0)	-
Nitrogen	23.2.68	23.2.68	-
Nitrogen	9.4.68	9.4.68	9.4.68
Grazing	10.4.68 (121.6)	10.4.68 (121.6)	10.4.68 (121.6)

NOTE: Figures in brackets following grazing dates represent relative measurements of grazing intensity and duration (in sheep-grazing-hours).

APPENDIX 3

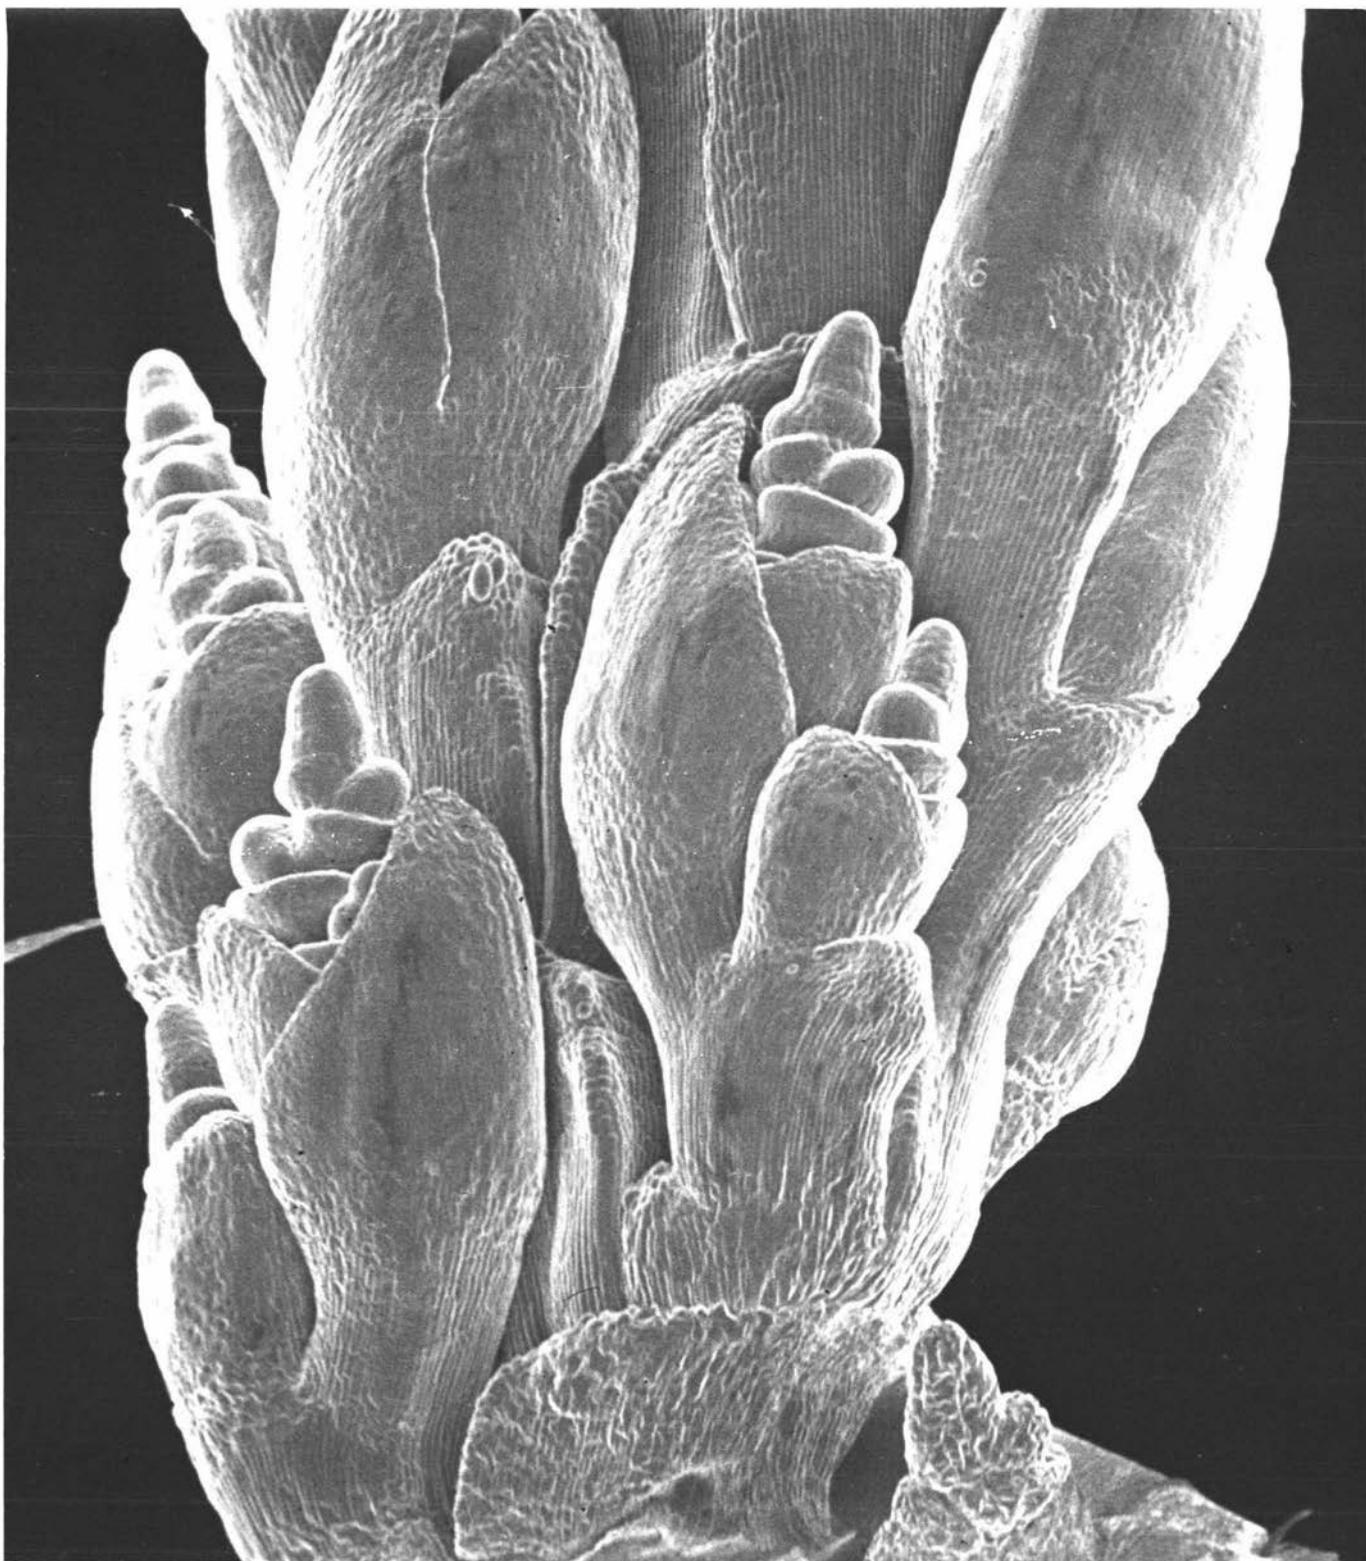

Electron microscope photographs of developing seedheads of perennial ryegrass and prairie grass (see acknowledgements).

KEY (in order)

1. Early stage of floret differentiation - perennial ryegrass (X115).
2. Later stage of floret differentiation - perennial ryegrass (X75).
3. Early stage of basal floret differentiation and panicle branch development - prairie grass (X132).

APPENDIX 12

TECHNIQUE FOR DETERMINATION OF SEED CHLOROPHYLL AND ANTHOCYANIN CONTENT

CHLOROPHYLL CONTENT

Extraction was achieved by macerating florets in an 80 : 20 ml acetone/water mixture. After three changes of solvent extraction was usually complete and the combined macerate was Buchner-filtered and made to a volume of 100 ml with 80% acetone. The optical density of the resultant solution was determined on a Unicam SP500 spectrophotometer at wavelengths of $645 \text{ m}\mu$ and $663 \text{ m}\mu$. From the data obtained, the relative concentrations of chlorophylls a and b in the filtered solution was calculated using equations previously derived by Arnon (1949) from the coefficients of absorption for chlorophylls in aqueous acetone. The chlorophyll a : b ratio was calculated directly from these concentrations and converted to total chlorophyll % of dry matter by consideration of sample size and dry matter content.

ANTHOCYANIN CONTENT

As in the case of chlorophyll determination, the assessment of anthocyanin content in seeds of the test species was carried out using the procedure suggested by Stoddart (1964c).

Extraction was undertaken at controlled pH by macerating seed in 1% hydrochloric acid. After three changes of solvent the combined extract was filtered and made to a volume of 100 ml with 1% hydrochloric acid. Following the suggestion by Stoddart (1964c) and in the absence of further information on the exact chemical identification of the anthocyanin pigments present in each test species, the anthocyanins in the seeds of all three grasses were assumed to be identical. Pigment concentration was expressed solely in terms of optical density at $510 \text{ m}\mu$ as determined on a Unicam SP500 spectrophotometer.

APPENDIX 26

CORRELATION MATRIX, PERENNIAL RYEGRASS

Key to Correlation Matrix

1. Day number.
2. Treatment number.
3. Number flowers open at peak anthesis.
4. % flowers open peak anthesis.
5. Number flowers open peak anthesis previous day.
6. Time of onset daily anthesis.
7. Duration daily anthesis.
8. Av. length of time individual florets open.
9. Time of peak anthesis.
- 10-12.Temperature, day of anthesis, max. min. mean.
- 13-15.Temperature night prior to anthesis, max. min. mean.
- 16-18.Temperature previous day, max. min. mean.
- 19-21.Temperature night 36 hours prior to anthesis, max. min. mean.
- 22-24.Humidity, day of anthesis, max. min. mean.
- 25-27.Humidity, night prior to anthesis, max. min. mean.
- 28-30.Humidity previous day, max. min. mean.
- 31-33.Humidity night 36 hours prior to anthesis, max. min. mean.
34. Rainfall, total on day of anthesis.
- 35-37.Windspeed (av.) day of anthesis, max. min. mean.
38. Windspeed (av.) night prior to anthesis, mean.
- 39-41.Light units, day of anthesis, max. min. mean.
- 42-44.Light units, previous day, max. min. mean.

APPENDIX 28

CORRELATION MATRIX, PRAIRIE GRASS

Key to Correlation Matrix

1. Day number.
2. Treatment number.
3. Number of flowers open at peak anthesis.
4. Percentage flowers open at peak anthesis.
5. Number flowers open peak anthesis previous day.
6. Time of onset daily anthesis.
7. Duration daily anthesis.
8. Av. length of time individual florets open.
9. Time of peak anthesis.
- 10-12.Temperature day of anthesis, max. min. mean.
- 13-15.Temperature night prior to anthesis max. min. mean.
- 16-18.Temperature previous day, max. min. mean.
- 19-21.Temperature night 36 hours prior to anthesis, max. min. mean.
- 22-24.Humidity day of anthesis, max. min. mean.
- 25-27.Humidity night prior to anthesis, max. min. mean.
- 28-30.Humidity previous day, max. min. mean.
- 31-33.Humidity night 36 hours prior to anthesis, max. min. mean.
34. Rainfall, total on day of anthesis.
- 35-37.Windspeed (av.) day of anthesis, max. min. mean.
38. Windspeed (av.) night prior to anthesis, mean.
- 39-41.Light units day of anthesis, max. min. mean.
- 42-44.Light units previous day, max. min. mean.
