The Ecological Footprint of International Tourists in New Zealand

A thesis presented in partial fulfilment for the degree of
Master of Applied Science in Natural Resource Management
at Massey University, Palmerston North, New Zealand

Katrina Marie O'Connor

2009

ABSTRACT

Ecological Footprint Analysis (EFA) is a technique that was first developed by Wackernagel as a Ph.D. thesis in 1994, then further developed in combination with Rees and published (Rees & Wackernagel, 1995). EFA is employed in this study to assess the resource utilisation of international tourists visiting New Zealand. Tourism is one of the fastest growing industries in the world and the ecological sustainability of tourism is becoming more important term for managing tourism. This is becoming increasingly important with tourism identified as particularly as a significant contributor to carbon emissions.

This study uses EFA to assess whether international tourists visiting New Zealand behave in a sustainable manner. Tourists are surveyed and classed into high, mid and low budget tourist types to gain a detailed account of their behaviour with particular reference to food, accommodation, transport, services, activities attractions, goods and waste. The EFA helps to identify areas of a tourist's trip that have the greatest impact on the environment, thereby identifying ways to improve the sustainability of tourism in New Zealand. It was found that tourists generally consume more whilst on holiday than they do at home and more than New Zealand residents. The results show that international tourists' behaviour is sustainable and New Zealand has the ecological carrying capacity to allow the number of international tourists to increase without incurring any significant ecological costs to the country.

It was found that there is a positive relationship between 'high' income tourists and their ecological footprint and that independent travellers have a larger ecological footprint than the package travellers; however, package travellers have a larger food and housing ecological footprint than independent travellers. The energy footprint was the largest out of the six land types of a tourist's ecological footprint. Food is the consumption category that is the largest contributor to a tourist's ecological footprint.

ACKNOWLEDGEMENTS

This project would not have been possible without the constant support, encouragement and willing participation of many colleagues, friends and family.

I would like to thank my two supervisors; Associate Professors John Holland and Ed Minot. Not only did John guide me through every aspect of this research, but was also very encouraging which was important and helped me to stay positive. John's flamboyant personality and his many stories about his experiences made coming into House 39 a pleasure every day. I greatly appreciate Ed Minot's supervision and for being so generous with his time. Ed's input into the analysis and the mechanics of this study was absolutely indispensable and his knowledge and understanding of statistics was so helpful. I would also like to thank Dr. Alisdair Noble for helping me with the statistical side of this study.

To the members of House 39, you guys are so awesome. You guys also make it a pleasure to come into the office everyday and at night. The many conversations, jokes and encouragement I have experienced with you guys made my years of post-grad a memorable and happy one. So thank you guys, because in the two and a bit years spent in the office you guys kept me motivated to keep going.

To my close friends, you go above and beyond your call of duty as a friend. I greatly appreciate you for helping me maintain a good balance in life during this research and most importantly as a friend.

First of all I want to thank my Mum and Brother Christopher for helping me hand out surveys in Queenstown. I really appreciate the generosity of my Uncle Peter and Aunty Kathryn for allowing me to stay with them during the final months of this research. Lastly, and most importantly, I want to thank my family for the constant encouragement and for always believing in me. This would not have been possible without you supporting me.

-Ad Majoram Dei Gloram-
