1978

ABSTRACT

The self-association of both β -casein A¹ and Brij 35 in aqueous solution has been studied at several temperatures using the techniques of microcalorimetry, sedimentation equilibrium, sedimentation velocity, pycnometry and surface tension measurements. Attempts to obtain the equilibrium concentration of the various β -casein species in solution by ultracentrifugation have been unsuccessful owing to both degradation and the rate of equilibration. The equilibrium concentrations for β -casein were estimated from published fluorescence data.

The results have been analysed by treating each self-association process as being one of micelle formation. For both systems the standard free energy of micelle formation was negative whereas the corresponding standard enthalpy and entropy changes were positive. The temperature trends in the various thermodynamic parameters were inconclusive owing to experimental uncertainty.

The significance of the values of the thermodynamic parameters is discussed qualitatively. The driving force behind the self-association process for both systems appears to be the positive entropy change associated with the hydrophobic effect. A comparison is made between the two systems and it is concluded that β -casein self-association is similar in several respects to micelle formation in solutions of synthetic detergents.

ACKNOWLEDGEMENTS

I would like to express my gratitude to Professor G.N. Malcolm, Dr I.D. Watson and Dr J.A. Lewis for the help and encouragement they provided during their supervision of this thesis.

I would also like to thank Dr G.R. Hedwig for his helpful comments and suggestions.

The advice and assistance of Dr L.K. Creamer, Dr K.N. Pearce and the Technical Staff of the Protein Section of the New Zealand Dairy Research Institute was greatly appreciated.

I acknowledge the financial assistance provided by a Postgraduate Scholarship from the University Grants Committee, a Departmental Demonstratorship from Massey University and a Bursary from the Dairy Research Institute.
