**LARYNGOSPASM DURING GENERAL
ANAESTHESIA IN THE CAT**

**A thesis
presented in partial fulfilment
of the requirements for the degree of
Doctor of Philosophy in Veterinary Science
at Massey University**

MICHAEL ALBERT EDWARD REX

1969

ACKNOWLEDGEMENTS

It is a pleasure to acknowledge the encouragement and advice which were given to me by Dr. D.A. Titchen and Professor E.D. Fielden.

Dr. R.E. Rawstrom and Dr. C.S.W. Reid have also helped by discussing results. Mr. R. Faulding has maintained the electronic and anaesthetic apparatus and Mr. G.H. Burns was responsible for the photography.

I am grateful to Mr. B.A. Reynolds, Mr. B. Barnett, Mr. D.W. Dellow and Miss L. Waern-Bagge for technical assistance and to Mr. L. Jenkins and the staff of the Massey University library for their help with references.

I also wish to record my thanks to my colleagues in the Department of Veterinary Clinical Sciences for their co-operation, encouragement and helpful criticism.

Miss May Soo typed the thesis.

TABLE OF CONTENTS

	Page
I INTRODUCTION	1
II REVIEW OF THE LITERATURE AND AN INTRODUCTION TO THE PROBLEM	2
1. A Consideration of the Structural and Functional Basis of Laryngospasm	2
(a) The gross anatomy of the larynx	2
(b) The innervation of the larynx and receptor areas which may be involved in the laryngeal reflex	4
(1) Motor innervation	4
(ii) The afferent pathways	5
Stimulation of the nasal mucosa, soft palate and pharynx	6
Stimulation of the epiglottis and larynx	10
Stimulation of the tracheo-bronchial tree	12
Stimulation of the abdominal viscera and diaphragm	14
(c) Laryngeal closure and its function	15
2. The Clinical Significance of Laryngospasm	18
(a) The importance of laryngospasm and bronchospasm in man and animals	19
(b) Conditions under which laryngospasm occurs	20
(c) Methods suggested for preventing laryngospasm	22

	Page
III EXPERIMENTAL PREPARATIONS EMPLOYED AND THE ACTIVITY OF THE LARYNGEAL MUSCLES AND THE DIAPHRAGM DURING QUIET RESPIRATION AND INFLATION AND DEFLATION OF THE LUNGS	24
1. The Experimental Preparation	24
(a) Maintenance of anaesthesia with chloralose	25
(b) The decerebrate preparation	27
(c) Maintenance of anaesthesia with other agents	29
2. Methods Used to Investigate the Activity of the Laryngeal Muscles	31
(a) A historical consideration of electromyography	31
(b) Techniques for electromyography	32
(c) Development of a recording technique	34
(d) Difficulties encountered in obtaining a satisfactory record	35
(e) Section and stimulation of nerves	37
3. Results of Investigations into the Resting Activity of the Diaphragm and the Intrinsic Laryngeal Muscles	37
4. The Activity of the Diaphragm and Some of the Intrinsic Laryngeal Muscles during Inflation and Deflation of the Lungs	38
(a) Inflation	39
(b) Deflation	39
5. A Discussion of the Records Obtained during Quiet Respiration and on Inflation and Deflation of the Lungs	40
(a) Activity during quiet respiration	40
(b) Activity during maintained inflation of the lungs	43

	Page
(c) Activity during maintained deflation of the lungs	44
(d) Conclusions drawn from electromyographic records obtained during inflation and deflation of the lungs	44
IV THE RESPONSES OF THE LARYNGEAL MUSCLES AND DIAPHRAGM TO MECHANICAL AND CHEMICAL STIMULATION OF THE RESPIRATORY TRACT	46
1. Experiments to Record the Responses of the Laryngeal Muscles and Diaphragm to Mechanical and Chemical Stimulation of the Respiratory Tract and the Effects of Some Other Drugs on These Responses	47
(a) The effects of mechanical stimulation of the pharynx, soft palate, larynx and trachea	47
(b) The effects of spraying the pharynx and anterior larynx with volatile anaesthetic agents	49
(c) The effects of the inhalation of volatile anaesthetic agents, administered by mask, into the intact respiratory tract	51
(d) The effects of the passage of volatile anaesthetic agents into isolated areas of the respiratory tract: the nasopharynx and larynx; the trachea; the distal trachea and lungs	53
(i) Passage of volatile anaesthetic agents through the nasopharynx and larynx	54
(ii) Passage of volatile anaesthetic agents through an isolated tracheal segment with nerve and blood supply intact	54
(iii) Passage of volatile anaesthetic agents into the distal trachea and lungs	55
(e) Threshold of stimulation of laryngosymen	57

	Page
(f) The effects of atropine on the reaction to stimulation of the respiratory tract	62
(g) The effects of local analgesic spraying of the pharynx and anterior larynx on the stimulation of laryngospasm by volatile anaesthetic agents	64
(h) The effect of suxamethonium on the stimulation of laryngospasm and on the activity of the cricothyroid muscle and diaphragm	66
(i) The effect of thiopentone on the stimulation of the respiratory tract by volatile anaesthetic agents	67
2. Discussion of the Experimental Results Reported in Chapter IV	68
(a) Mechanical stimulation	68
(b) Spraying the pharynx and larynx with anaesthetic agents or saline	70
(c) Inhalation of anaesthetic agents to the intact respiratory tract	71
(d) The effects of volatile anaesthetic agents on isolated areas of the respiratory tract	73
(e) Threshold of stimulation	75
(f) The effects of atropine	78
(g) The effect of analgesic sprays	79
(h) The effects of muscle relaxants	80
(i) The effect of barbiturates	82
V THE EFFECTS OF CUTTING NERVES WHICH MAY BE INVOLVED IN THE LARYNGEAL REFLEX, AND SOME RESULTS OF THEIR STIMULATION	83
1. Experiments to Record the Effects of Cutting Nerves Which May be Involved in the Laryngeal Reflex and Some Effects of Their Stimulation	84

	Page
(a) The effects of cutting the internal branch of the superior laryngeal nerves	84
(b) The effects of cutting the recurrent laryngeal nerves	85
(c) The effects of a perineural block of the trigeminal nerves with local analgesic solution	85
(d) The effects of cutting the cervical vagus nerves	86
(e) Stimulation of nerves thought to form part of the laryngeal reflex pathways	87
2. Discussion of the Effects of Cutting or Stimulating Nerves Which May be Involved in the Laryngeal Reflex	88
 VI THE EFFECTS OF INTRAVENOUS INJECTIONS OF A SOLUTION OF ETHER. A COMPARISON WITH THE EFFECTS OF INJECTING A SOLUTION OF HYDROGEN CYANIDE	 94
1. Experiments to Record the Effects of the Intravenous Injection of Solutions of Ether and Hydrogen Cyanide	95
(a) The effects of injecting anaesthetic solutions and saline into the femoral vein	95
(b) A comparison of the effects of the intravenous injection of solutions of ether and hydrogen cyanide	96
2. Discussion of the Results of Experiments on the Intravenous Injection of Solutions of Ether and Hydrogen Cyanide	102
 VII GENERAL SUMMARY AND CONCLUSIONS	 107
