ENDOCRINE CELLS IN THE  
GASTROINTESTINAL  
TRACT OF  
SHEEP

A thesis presented in partial fulfilment of  
the requirements for the  
Degree of Doctor of Philosophy  
in Histology  
at Massey University

Michael Peter Gurnsey  
1985

## ABSTRACT

Previous investigations have shown that the digestive activities of the mammalian GI tract are controlled, in part at least, by biologically active compounds released from endocrine cells in the mucosa of the GI tract itself. Despite this, comparatively few studies have been made of the endocrine cells in the GI tract of sheep. There is also a paucity of information about the suitability and reliability of histochemical and immunohistochemical methods for the identification of GI endocrine cells in sheep.

The aims of this study were to: (a) establish reliable techniques for identifying endocrine cells in the GI tract of sheep, (b) use these techniques to investigate the effects of age on the distribution and densities of various GI endocrine cells, and (c) investigate possible changes in endocrine cell densities due to infection with the helminth parasite Trichostrongylus colubriformis.

Initially, various histochemical and immunohistochemical staining techniques were investigated for their suitability for identifying endocrine cells in mucosal samples from reticulum, rumen, body and antral regions of the abomasum, three duodenal sites, ileum, colon and caecum, as well as the pancreas, of adult animals. As a result, the De Grandi technique was selected to estimate argyrophilic cell densities, EC cells were identified by the fast garnet technique, and ECL cells by their silver staining and morphological characteristics. The PAP immunohistochemical technique was used to identify G, S, and A cells, using antisera to gastrin, secretin, and pancreatic glucagon, respectively.

No endocrine cells of any type were found in the reticulum or rumen. Argyrophilic cell densities were greatest in the abomasal body and proximal duodenum, then decreased distally. EC cell densities were highest in the duodenum, although, like argyrophilic cells, they were found throughout the abomasum and intestines. In contrast, ECL cells were confined to the abomasal body. Greatest densities of G cells occurred in the abomasal antrum and proximal duodenum; they were absent from the abomasal body, ileum and large intestine. S cells were

confined in their distribution to the small intestine.

Pancreatic islets of Langerhans contained A cells, as well as cells with slight argyrophilia; the identity of the latter cells was not determined. A cells were also found in exocrine acini, but these were the only cells in the exocrine portion of the pancreas that were stained by any of the histochemical or immunohistochemical techniques used. No A cells were identified in the mucosa of the GI tract.

These studies also clearly established that ovine G cells are not argyrophilic. This finding is in contrast to those reported for most mammalian species with a simpler form of stomach.

The effects of age on endocrine cell densities were studied using the tissues from 100 - 110 day old fetuses, 2 week and 24 week old lambs, and adult sheep. All endocrine cell types identified in adult sheep were also present at the other ages. However, in the fetuses, endocrine cell densities were lower than in other age groups. The most notable age-related trend was that antral G cell densities increased with increasing age. In contrast, from 2 weeks of age, there was a decrease in intestinal G cell densities with increasing age. It was also clear that D cell densities were much higher in 2 week old lambs than for any other age group. Possible explanations for these age-related changes in endocrine cell densities are discussed.\*

The effects on endocrine cell densities of an experimental infection with 40,000 T. colubriformis larvae was investigated in 40 week old lambs. Although the resultant infestation was mild, there was a significant ( $P < 0.001$ ) increase in argyrophilic cell densities in the proximal small intestine. Specific identification of the argyrophilic cell type(s) which had increased was not possible, however, the most likely candidates were D<sub>1</sub>, X and K cells.

It was concluded from these studies that endocrine cells, similar in morphology and staining characteristics to those of other mammalian species, occur within the mucosa of the abomasum, small and large intestine of sheep. Greatest densities of endocrine cells occur in the

Footnote \* D (somatostatin containing) cells were located throughout the abomasum and intestines of all nonadult animals and in pancreatic islets of 2 and 24 week old lambs.

abomasum and proximal duodenum. Cell types identified in the GI tract included EC, ECL, G, S and D cells, while D and A cells were identified in pancreatic islets. It was demonstrated that endocrine cell densities change with age and that significant changes in cell densities can occur in mild trichostrongylosis.

## ACKNOWLEDGEMENTS

Special gratitude is due to Drs K.R. Lapwood and G.W. Reynolds for their continued encouragement and the guidance so willingly given throughout the term of this project.

I also wish to thank Professor R.E. Munford for his role as supervisor and for making available the facilities of the Department of Physiology and Anatomy.

Special thanks are also due to Mr M.J. Birtles and Dr W.A.G. Charleston for the many helpful discussions and the expert advice given.

Massey University sheep farm supervisor, Mr P.H. Whitehead, is thanked for provision and management of sheep used in this study.

I sincerely thank Messrs R.N. Ward, I. Denby, Mrs B.G. Batchelar, Miss P.J. Wylie and S. Thomas for the skilled technical assistance so generously given, Mr K. Korndorffer for assistance in preparation of figures, Mr T.J. Law for photographic advice and Mrs G. Shaw for her patient typing of this thesis.

Dr J. Hansky is thanked for generously providing gastrin antiserum (As'74) and Dr R.V. Brunsdon is thanked for making available the T. colubriformis larvae used in this study.

I am indebted to Dr R.W. Bailey and the D.S.I.R. for enabling me to undertake this study.

Finally I wish to acknowledge the moral support and encouragement given by my wife Catherine during the period of this study.

## TABLE OF ABBREVIATIONS

## Abbreviation

Ab	Abomasum
APUD	Amine precursor uptake and decarboxylation
As '74	Antiserum '74
BLI	Bombesin-like immunoreactivity
BSA	Bovine serum albumin
Ca <sup>2+</sup>	Calcium ions
CaCl <sub>2</sub>	Calcium chloride
CCK	Cholecystokinin
Chr	Chromaffin
CI	Colour Index
Cl <sup>-</sup>	Chloride ions
cm	centimetre
c.mm <sup>-2</sup>	cells per square millimetre
CNS	Central nervous system
CTMC	Connective tissue mast cell
DAB	Diaminobenzidine tetrahydrochloride
DF	Degrees of freedom
DG	De Grandi
Duo	Duodenum
EDTA	Ethylenediaminetetraacetic acid
EM	Electron microscope
emg	electromyogram
epg	eggs per gram
FB	Fast Black
FG	Fast Garnet
Fig.	Figure
g	gram
Gas	Gastrin
GEP	Gastro-entero-pancreatic
GI	Gastrointestinal

GIP	Gastric inhibitory polypeptide
GL	Glucagon-like immunoreactivity
GRP	Gastrin releasing peptide
H and E	Haematoxylin and eosin
HCl	Hydrochloric acid
$\text{HCO}_3^-$	Bicarbonate ions
Histo	Histochemical
hr(s)	hour(s)
5-HT	5-hydroxytryptamine (serotonin)
IgG	Immunoglobulin G
Immuno	Immunohistochemical
IR	Immunoreactive
$\text{K}^+$	Potassium ions
KCl	Potassium chloride
$\text{K}_2\text{CrO}_4$	Potassium chromate
$\text{K}_2\text{Cr}_2\text{O}_7$	Potassium dichromate
kg	kilogram
KIU	Kallikrein inhibitor unit
ℓ	litre
LI	Large intestine
m	metre
M	Molar
mg	milligram
$\text{Mg}^{2+}$	Magnesium ions
MH	Masson-Hamperl
min	minute
ml	millilitre
mm	millimetre
MMC	Mucosal (or Migrating) mast cell
mmol	millimole
mol	mole
Mol. wt.	Molecular weight
m.p.	melting point
$\mu\text{l}$	microlitre
$\mu\text{mol}$	micromole

n	number /group
N	Normal
Na <sup>+</sup>	Sodium ions
No	Animal number
PAP	Peroxidase anti-peroxidase
PBS	Phosphate buffered saline
pers. com.	personal communication
pg	picogram
PHI	Porcine heptacosapeptide
pmol	picomole
PO <sub>4</sub> <sup>3-</sup>	Phosphate ions
PP	Pancreatic polypeptide
%	percent
RIA	Radioimmunoassay
Sec	Secretin
SEM	Standard error of the mean
SI	Small intestine
SM	Sevier-Munger
Som	Somatostatin
Tris	Tris(hydroxymethyl)aminomethane
VFA	Volatile fatty acid
VIP	Vasoactive intestinal polypeptide
<u>vs</u>	versus
wks	weeks
yrs	years

Abbreviations used for specific endocrine cell types are given in Table 1.1.

Abbreviations used for sites from which mucosal samples were taken are given in Tables 2.2 and 7.3.

4.11	Group of argyrophilic cells in abomasal gastric gland of foetal lamb (De Grandi method)	161
4.12	Argyrophilic cell opening in to abomasal antral gland of foetal lamb (De Grandi method)	161
4.13	Argyrophilic cell with basal cytoplasmic process in abomasal antral gland of foetal lamb (De Grandi method)	162
4.14	Argyrophilic cells near tip of duodenal villus of foetal lamb (De Grandi method)	162
4.15	Argyrophilic cells ('closed' type) in intestinal crypts of foetal lamb (De Grandi method)	162
4.16	EC cell ('closed' type) in abomasal gastric gland of foetal lamb (fast garnet method)	163
4.17	EC cell in intestinal crypt and CTMC's in duodenal connective tissue of foetal lamb (fast garnet method)	163
4.18	EC cell near base of duodenal villus of foetal lamb (fast garnet method)	163
4.19	Diazonium positive cell in intestinal villus of foetal lamb (fast garnet method)	165
4.20	Antral G cell in abomasum of foetal lamb (gastrin antiserum (As'74)/PAP method)	165
4.21	Intestinal G cells in duodenum of foetal lamb (gastrin antiserum (As'74)/PAP method)	165
4.22	Intestinal S cells in duodenum of foetal lamb (secretin antiserum/PAP method)	166
4.23	D cell ('open' type) in abomasal antral gland of foetal lamb (somatostatin antiserum/PAP method)	166
4.24	D cell ('closed' type) in abomasal antral gland of foetal lamb (somatostatin antiserum/PAP method)	166
5.1	Distribution of argyrophilic and EC cells in the GI tract of 2 week old lambs (De Grandi and fast garnet methods)	173
5.2	Distribution of G, S and D cells in the GI tract of 2 week old lambs (gastrin (As'74), secretin and somatostatin antisera/PAP method)	177

5.3	Argyrophilic cell ('closed' type) with basal cytoplasmic process in abomasal gastric gland of 2 week old lamb (De Grandi method)	180
5.4	Argyrophilic cell ('closed' type) in abomasal antral glands of 2 week old lamb (De Grandi method)	180
5.5	Argyrophilic cell in duodenal crypt of 2 week old lamb (De Grandi method)	180
5.6	Argyrophilic cells ('open' type) in Brunner's gland of 2 week old lamb (De Grandi method)	181
5.7	Argyrophilic cell ('closed' type) in Brunner's gland of 2 week old lamb (De Grandi method)	181
6.1	Distribution of argyrophilic and EC cells in the GI tract of 2 week old lambs (De Grandi and fast garnet methods)	189
6.2	Distribution of G, S and D cells in the GI tract of 2 week old lambs (gastrin (As'74), secretin and somatostatin antisera/PAP method)	190
6.3	D cells ('closed' type) in abomasal gastric glands of 2 week old lambs (somatostatin antiserum/PAP method)	196
6.4	D cells ('open' and 'closed' types) in abomasal antral gland of 2 week old lamb (somatostatin antiserum/PAP method)	196
6.5	D cell ('closed' type) with basal cytoplasmic process, in abomasal antral gland of 2 week old lamb (somatostatin antiserum/PAP method)	196
6.6	D cells ('open' type) in duodenal crypt of 2 week old lamb (somatostatin antiserum/PAP method)	197
6.7	D cell near tip of duodenal villus of 2 week old lamb (somatostatin antiserum/PAP method)	197
6.8	EC cells in duodenal crypts of 2 week old lambs (fast black method)	201
6.9	Diazonium positive cell ('closed' type) in Brunner's gland of 2 week old lamb (fast black method)	201
6.10	Globular leucocyte in duct of Brunner's gland of 2 week old lamb (fast black method)	202
6.11	CTMC's in duodenal submucosal connective tissue of 2 week old lambs (fast black method)	202
7.1	Body weights (mean + SEM) for control animals and lambs infected with <u>T. colubriformis</u> larvae	211
7.2	<u>T. colubriformis</u> worm in 'tunnel' near tip of duodenal villus of experimentally infected lamb (alcian blue/H and E method)	212

7.3	Duodenal mucosa of experimentally infected lamb showing infiltration of lamina propria by lymphocytes (alcian blue/H and E method)	212
7.4	Distribution of argyrophilic cells in the GI tract of control and experimentally infected lambs	215
7.5	Distribution of EC cells in the GI tract of control and experimentally infected lambs	216
7.6	Distribution of G cells in the GI tract of control and experimentally infected lambs	217
7.7	Distribution of S cells in the GI tract of control and experimentally infected lambs	218
7.8	Distribution of D cells in the GI tract of control and experimentally infected lambs	219
8.1	Distribution of argyrophilic cells in the GI tract of sheep at various ages	234
8.2	Distribution of EC cells in the GI tract of sheep at various ages	235
8.3	Distribution of G cells in the GI tract of sheep at various ages	236
8.4	Distribution of S cells in the GI tract of sheep at various ages	237
8.5	Distribution of D cells in the GI tract of sheep at various ages	238

## LIST OF TABLES

Table		Page No.
	Table of abbreviations	v
1.1	Santa Monica classification of GEP endocrine cells, their distributions and secretory products	46
2.1	Sexes, body weights, ages and diets of animals and sample collection methods used in these studies	60
2.2	Tissue sampling sites for adult and 6 month old sheep	61
2.3	Tissue processing schedule	64
2.4	Gastric endocrine cells and their response to various histochemical stains	66
2.5	Intestinal endocrine cells and their response to various histochemical stains	67
2.6	Key to reference numbers and species used in publications cited in Tables 2.4 and 2.5.	68
2.7	Grimelius and De Grandi argyrophilic methods	69
2.8	Sevier-Munger argyrophilic method	70
2.9	Masson-Hamperl argentaffin method	71
2.10	Chromaffin method	72
2.11	Fast garnet diazonium method	74
2.12	Fast black diazonium method	74
2.13	Xanthydrol method	75
2.14	Toluidine blue method	75
2.15	Alcian blue/haematoxylin and eosin method	76
2.16	Alcian blue/haematoxylin and eosin low pH method	76
2.17	Lead-haematoxylin method	77
2.18	Indirect peroxidase conjugate method	79
2.19	Peroxidase-antiperoxidase (PAP) method	81
2.20	Sources, dilutions and incubation times of antisera	82
2.21	Cross-reactivities of gastrin, secretin and glucagon antisera as determined by RIA	83
3.1	Peptides and peptide fragments used in cross-reactivity study	89

3.2	Effects of dilution of gastrin antiserum (As'74) on antral G cell counts	97
3.3	Specificity of primary antisera used in present studies	99
3.4	Analysis of variance for chromaffin and fast garnet staining methods in adult sheep	105
3.5	Analysis of variance for argyrophilic and argentaffinic staining methods in adult sheep	106
3.6	Morphology, distribution and identity of abomasal mucosal cells stained by fast garnet technique	113
3.7	Analysis of variance for argyrophilic, EC, G and S cell densities in adult sheep	136
4.1	Analysis of variance for argyrophilic, EC, G, S and D cell densities in 100 - 110 day old foetuses	158
5.1	Analysis of variance for argyrophilic, EC, G, S and D cell densities in 2 week old lambs	125
5.2	Morphological characteristics and distribution of GI endocrine cells in 2 week old lambs	179
6.1	Analysis of variance for argyrophilic, EC, G, S and D cell densities in 6 month old lambs	192
6.2	Morphological characteristics and distribution of GI endocrine cells in 6 month old lambs	195
6.3	EC cell densities determined using fast garnet and fast black staining methods in 6 month old lambs	198
6.4	Analysis of variance of EC cell densities determined using fast garnet and fast black staining methods in 6 month old lambs	199
7.1	Regimen for feeding and housing lambs raised to be nematode free	206
7.2	Composition of lucerne nuts	207
7.3	Tissue sampling sites for infected and non-infected lambs	208
7.4	<u>T. colubriformis</u> egg counts in faeces of experimentally infected lambs	209
7.5	Analysis of variance for argyrophilic, EC, G, S and D cell densities in infected and control lambs	214
8.1	Histochemical staining reactions of ovine endocrine cells	228
8.2	Distribution of endocrine cells in the GI tract and pancreas of sheep	232
