SCHIZOPHRENIA (AND OTHER PSYCHOTIC DISORDERS)
COGNITIVE-BEHAVIOUR THERAPY RESEARCH PROGRAMME

A thesis presented in partial fulfilment
of the requirements for the degree of

Master of Arts in Psychology

at Massey University

Ruth Gillingham

2005

Abstract

The present study evaluated the effectiveness of a treatment that combined techniques from Cognitive-Behaviour Therapy (CBT) and Acceptance and Commitment Therapy (ACT) to alleviate the psychological distress and symptom severity resultant from psychotic-type disorders. This treatment (EVoLVE Therapy; an acronym for Exposing Virtues of Living Valued Existences) was designed to primarily target the psychological distress associated with psychotic disorders and secondarily to facilitate improvement in psychotic-type symptoms. Participants in this study were selected based on previous diagnoses of schizophrenia, schizoaffective, and other psychiatric disorders with psychotic features. Seven participants, who had each been long-term consumers of mental health services, completed 10 weeks of therapy. Post-graduate students, in training to become professional psychologists, delivered supervised therapy using a structured treatment manual written by the researcher. Pre-treatment, post-treatment and 5-week follow-up data were collected, using a variety of measures to assess the effectiveness of treatment. Results were quite positive overall, with some clients making considerable improvements in a number of domains. All 7 participants showed a decrease in symptom severity after treatment. In addition, 6 out of the 7 participants reported an improved quality of life following treatment. Marked improvement in negative affect was also evident, with a slight improvement in positive affect noted.

Acknowledgements

First, I would like to thank the eight participants who took part in this research. This thesis would not have been possible without you. It was a pleasure getting to know you, and I wish you well as you strive toward living lives of quality and value despite having a chronic mental illness.

I would like to acknowledge and thank my supervisor – Dr Patrick Dulin. Thank you for your valuable guidance and supervision during the clinical practice, for your clear editing, and for being there to support, encourage, and motivate me throughout this project. Thank you also to my second supervisor – Professor Ian Evans – for your support and guidance, especially with the design of the study and the EVoLVE Therapy manual. Thanks to you both for your unwavering belief in me, and my ability to do this project.

I would like to acknowledge the staff at SF Manawatu, in particular, Christine Zander, Jan Holdaway, and Elizabeth Green. Thanks Christine for proposing this project to Ian. And, thank you to all three of you for welcoming my fellow therapists and I so warmly into the SF fold. You provide wonderful support to those whose lives are affected by mental illness.

Thank you also to the independent assessor for this research – Reneé Seebeck; and to my fellow therapists: Rebekah Jourdain, Kelly Richardson, Christina Robinson, and Amie Bingham. Without your help and support this project would have been much more difficult. In addition, I would like to acknowledge the cultural consultants for this project, Mr Turoa Haronga and Dr Paul Hirini. Thanks also to all the wonderful staff at the Psychology Clinic, Turitea, Massey University, for your assistance and support during the running of the treatment programme, and for providing the opportunity to conduct my research in your clinic. Thank you to Dr Shane Harvey for his assistance with aspects of the results section. Research approval was obtained from the Massey University Ethics Committee and the Manawatu/Whanganui Ethics Committee.

I would like to make special mention of my parents, Joan and Tom, and my mother-in-law, Rona. Thank you for the quality care of our children when needed, and for your love and support. Also, a special thank you to the family and friends who have supported and encouraged me throughout this thesis project – in particular, Bill and Annette, Tom, Marie Strachan, Edith and Heidi, Anna and Colin, Reneé and Andy, Phillipa and Nigel, Jackie and Paul, Annette and Des, and Simone.

Lastly, but by no means least, I would like to thank my wonderful husband, Murray, and our three beautiful children, Dean, Craig, and Kelly. Thank you Murray for your love, friendship, support, encouragement, technical and computing assistance, your belief in me, and for being an amazing father to our children. To our special children, thank you. I am so proud of you.
