The Future of Personal Area Networks in a Ubiquitous Computing World

A thesis presented in partial fulfillment
of the requirements for the degree of

Master of Information Sciences

in

Information Systems

at Massey University, Auckland

New Zealand

Fei Zhao

2008

ABSTRACT

In the future world of ubiquitous computing, wireless devices will be everywhere. Personal area networks (PANs), networks that facilitate communications between devices within a short range, will be used to send and receive data and commands that fulfill an individual's needs.

This research determines the future prospects of PANs by examining success criteria, application areas and barriers/challenges. An initial set of issues in each of these three areas is identified from the literature. The Delphi Method is used to determine what experts believe what are the most important success criteria, application areas and barriers/challenges.

Critical success factors that will determine the future of personal area networks include reliability of connections, interoperability, and usability. Key application areas include monitoring, healthcare, and smart things. Important barriers and challenges facing the deployment of PAN are security, interference and coexistence, and regulation and standards.

ACKNOWLEDGEMENTS

Firstly, I would like to take this opportunity to express my sincere gratitude to my supervisor – Associate Professor Dennis Viehland, for all his support and guidance during this research. Without his advice and knowledge, I would not have completed this research.

I would also like to thank all the experts who participated in the Delphi surveys of this study for their support and professional expertise. I really appreciate all the time and effort they have contributed for this research.

Last but certainly not least, I would like to thank all my family for their continuous support and care throughout this study.

Fei Zhao

TABLE OF CONTENTS

ABSTRACT	i
ACKNOWLEDGEMENTS	ii
CHAPTER 1: INTRODUCTION AND BACKGROUND	1
Introduction	1
Purpose of the Study.....	3
Background	4
<i>Passive PAN Technologies</i>	6
<i>Other Wireless Network Technologies</i>	8
Outline of the Study	10
CHAPTER 2: LITERATURE REVIEW	12
Introduction	12
Personal Area Network Studies.....	12
<i>PAN Technologies</i>	13
Issues That Will Determine the Future of Personal Area Networks	19
<i>PAN Success Criteria</i>	19
<i>Application Areas</i>	23
<i>Barriers and Challenges to Implementation</i>	28
Contribution to the Literature	35
Summary	36
CHAPTER 3: RESEARCH DESIGN.....	37
Introduction to the Delphi Method.....	37
Delphi Method for this Study.....	39
Delphi Method Implementation in this Study	40
CHAPTER 4: RESULTS	44
Introduction	44
Round One Results	44
<i>Success Criteria Results</i>	44
<i>Application Area Results</i>	48
<i>Barriers and Challenges Results</i>	51
Round Two Results	54
<i>Success Criteria Results</i>	54
<i>Application Area Results</i>	55
<i>Barriers and Challenges Results</i>	57
Round Three Results	58
<i>Success Criteria Results</i>	59
