ABSTRACT

This study attempted to determine the interactive effects of learner characteristics with two differentially but hierarchically structured programmed instructional tasks. The learner characteristics chosen were a subjects' independence and conformance achievement orientations and his prior familiarity with the subject matter. The two programmed texts constructed for the experiment were, 'A Procedural Approach to Introductory Statistics' and 'A Behavioural Approach to Learning'. Both texts were written by the researcher. The point of task differentiation was based on the degree of arbitrariness in the sequence order of criterion competencies; the statistics programme being deemed to be more intrinsically structured and the learning theory programme more extrinsically structured.

The results indicated a differential effect of learner characteristic variables between treatments and across tasks. Further, the results indicated both ordinal and disordinal treatment interactions on the dependent measures of criterion achievement, sequence appropriateness and task-related achievement motivation. The effects of instructional treatments were indeed modified by the interaction of tasks and learner characteristics.

ACKNOWLEDGEMENTS

The author is deeply grateful to the assistance provided in this study by Professor C.G.N. Hill of the Department of Education, Massey University, and to Mr I.D. Livingstone of the New Zealand Council for Educational Research for his assistance with the statistical analysis.

Acknowledgement is also given to the staff and students who assisted with or participated in the research project from the following institutions.

Department of Education, University of Auckland

Department of Education, Massey University

Department of Education, Victoria University of Wellington

New Zealand School of Advanced Nursing Studies

Tutor Training Unit of the Central Institute of Technology

Finally, very special thanks to my wife for her patience and cooperation, and to Mrs Lynn Sargent for the competent and helpful manner in which she typed the thesis.

Table

1	Means, Standard Deviations and Correlations for Achievement Orientation Measures
2	Correlation Coefficients of B40 with Achievement via Conformance and Achievement via Independence
3	Correlation Coefficients for Self Rating Scales (SRS) and Placement Tests (Test A)
4	Formative Evaluation: Range Parameters from Placement Tests (A) as Determinants for Selection to Programmed Versions
5	Formative Evaluation: Means and Standard Deviations for Statistic Task
6	Analysis of Variance of Criterion Achievement Scores in Formative Evaluation of Statistics Task
7	Formative Evaluation: Means and Standard Deviations for Learning Theory Task
8	Analysis of Variance of Criterion Achievement Scores in Formative Evaluation of Learning Theory Task
9	Test-Retest Correlation Coefficient for Task-Related Achievement Motivation (Tam) and Sequence Appropriateness (Sa)
10	Means and Standard Deviations for Statistics Task Measures
11	Means and Standard Deviations for Learning Theory Measures
12	Summative Evaluation: Analysis of Variance of Programmed Treatments in Statistics Task
13	Summative Evaluation: Analysis of Variance of Programmed Treatments in Learning Theory Task
14	Summary of Multiple Linear Regression of Achievement via Conformance, Self Rating Scale and Statistics Performance Data
15	Summary of Multiple Linear Regression of Achievement via Conformance, Test A and Statistics Performance Data
16	Summary of Multiple Linear Regression of Achievement via Independence, Self Rating Scale and Statistics Performance Data
17	Summary of Multiple Linear Regression of Achievement via Independence, Test A and Statistics Performance Data
18	Means and Standard Deviations for High and Low Achievement via Conformance, Achievement via Independence, Self Rating Scale and Test A on Statistics Performance Data
19	Means and Standard Deviations for Subjects High and Low in Achievement via Independence and Self Rating Scale on Statistics Task, Test C and Sa QEA
20	Summary of Multiple Linear Regression of Achievement via Conformance, Self Rating Scale and Learning Theory Performance Data

Table

21	Summary of Multiple Linear Regression of Achievement via Conformance, Test A and Learning Theory Performance Data
22	Summary of Multiple Linear Regression of Achievement via Independence, Self Rating Scale and Learning Theory Performance Data
23	Summary of Multiple Regression of Achievement via Independence, Test A and Learning Theory Performance Data
24	Means and Standard Deviations for High and Low Achievement via Conformance, Achievement via Independence, Self Rating Scale and Test A on Learning Theory Performance Data
25	Means and Standard Deviations for Subjects High and Low in Achievement via Independence and Test A on Learning Theory Performance Data
