THE USE OF OESTROUS COWS FOR THE PRE-COLLECTION

PREPARATION OF MATURE BULLS

STANDING AT AN ARTIFICIAL BREEDING CENTRE

- - - - -

A thesis presented to the Victoria University
of Wellington in partial fulfilment
of the requirements of the
degree of Master of
Agricultural
Science

- - - - -

K.L. MACMILLAN
Massey College, New Zealand
1962

ACKNOWLEDGEMENTS

The candidate wishes to record his indebtedness to the Awahuri and Newstead Artificial Breeding Centres of the New Zealand Dairy Production and Marketing Board, as without their responsive co-operation this study would not have been possible.

Particular thanks must be extended to those members of the staff at the Awahuri Centre who assisted in the trial. Their conscientious application, interest and advice did much towards the success of the experiment.

The interest and support shown by Mr. J.C. Newhook and Dr. D.S. Flux was much appreciated. Mr. A.C. Glenday's assistance and advice with statistical problems was accepted with gratitude.

Finally, the recording of formal thanks does not adequately express the author's appreciation for the counseling, the constructive criticism and the continuous interest shown by Mr. E.D. Fielden, Superintendant of the Awahuri Centre.

TABLE OF CONTENTS

Chapter		Page
	INTRODUCTION	1
	Part I	
	REVIEW OF LITERATURE	
I	The Effects of Oestrous Cows on Bull Behaviour	4
II	Major Considerations Relating to the Management of the Bulls and the Selection of the Teaser Cows	8
	2.1 Frequency of Collection	8
	2.2 Sexual Preparation	11
	2.3 Interval Between Services	14
	2.4 Seasonal and Climatic Variations in Semen Characteristics	15
	2.5 Semen Collection	17
	2.6 Teaser Cow Considerations	19
	2.7 Conclusions	23
III	Laboratory Techniques Used in Measuring Semen Quality and Quantity and The Measurement of Sexual Response	25
	3.1 Concentration of Sperm Cells	25
	3.2 Assessment of Spermatozoan Motility	26
	3.3 Differential Staining of Live and Dead Spermatozoa	26
	3.4 pH Measurements of Semen	28
	3.5 Initial Fructose Concentration of Semen	28
	3.6 Measurement of Sexual Response	29
	3.7 Summary	29

PART II

THE EXPERIMENTAL DESIGN

IV	The Design Adopted and Its Limitations	31
V	Associated Experimental Techniques	38
	5.1 Pre-Collection Preparation	38
	5.2 Stalling and Order of Collection	38
	5.3 The Collection Team	39

PART III

MATERIAL AND METHODS

VI	The Stock Used and Their Management During the Trial	40
	6.1 Bulls Selected for The Trial	40
	6.2 Cows From Which Teasers Were Selected	40
	6.3 The Collection Procedure	41
	6.4 Daily Selection of The Teaser Cow	44
	6.5 Stock Management	45
VII	Laboratory Techniques Used in Semen Assessment and The Measurement of Sexual Response	46
	7.1 Volume of Semen	46
	7.2 Concentration of Sperm Cells	46
	7.3 % Live Sperm	47
	7.4 Motility Assessments	48
	7.5 pH Measurements	49
	7.6 Initial Fructose Concentration	50
	7.7 Measurement of Sexual Response	50
	7.8 Summary of Semen Assessments	51

PART IV

RESULTS

VIII	Day to Day Variation in Sperm Output and Semen Volume	53
IX	Treatment Effects on Total Sperm Output, Total Semen Volume and Average Sperm Concentration	61
	9.1 Treatment Effect on Total Sperm Output	61
	9.2 Treatment Effect on Total Volume of Semen	68
	9.3 Treatment Effect on The Average Sperm Concentration	75
	9.4 Service by Treatment Inter-actions	80
X	Treatment Effects on Laboratory Tests Applied and Sexual Response	89
	10.1 Initial Fructose Concentration	89
	10.2 Percentage of Live Sperm	92
	10.3 Initial Motility Estimate	97
	10.4 Initial pH and pH change	102
	10.5 Re-Action Time	108

PART V

GENERAL DISCUSSION, SUMMARY AND CONCLUSIONS

XI	The Discussion and Interpretation of Results	112
	11.1 The Adequacy of the Experimental Design	112
	11.2 Treatment Effects on Total Sperm Output, Semen Output and Average Sperm Concentration	115
	11.3 Treatment Effects on Other Semen Characteristics	117
	11.4 The Implications of The Treatment Effects	119
XII	General Summary and Conclusions	124
