BEACH MORPHOLOGY AND SEDIMENTS OF THE
WEST WELLINGTON COAST: WANGANUI TO
PAEKAKARIKI

A thesis presented in partial fulfilment
of the requirements for the Degree of
Master of Science in Geography at
Massey University

by

RONALD GRAEME GIBBARD

1972.

ACKNOWLEDGEMENTS

I wish to thank the many people who gave assistance in the course of my research and this presentation of results. In particular I wish to acknowledge:

The following staff members of Massey University:

Dr. J.L. McArthur, Geography Department, for his valued supervision of field and laboratory procedures, and whose suggestions and constructive criticism were greatly appreciated; Professor K.W. Thomson, Geography Department, for the provision of transport; and Dr. C. Fife, former Head of Soil Science Department, for the use of the Soil Science Laboratory facilities.

The staff of the N.Z. Meteorological Service and the N.Z. Oceanographic Institute, Wellington, for the supplying of climatic data and bathymetric charts, respectively; and Mr. S. Ellen, Area Engineer (Paraparaumu), Hutt County Council, for providing background information and personal comments on beach conditions in the vicinity of Paraparaumu.

Fellow students at Massey University, especially Nanyang Lee, A. Taylor, P. Tayler and D. Stewart, who gave assistance in the field.

Professor D.W. McKenzie of the Geography Department, Victoria University, for the frontispiece photograph; Mrs M. McComish, Massey Illustrator, who completed a number of diagrams; and Mrs R. McGee for typing the thesis copy.

LIST OF TABLES

		page
Table I	Temperature statistics of selected Sand Country stations.	13
II	Offshore gradients to 50 fathom contour at four localities.	19
III	Swell wave heights at Waipipi Point, 1959.	28
IV	Breaker wave heights for Surveys 1 to 6.	29
V	Comparison of titano-magnetite and residual sample properties.	47
VI	Application of <u>t</u> -test to grain-size parameters of samples obtained from mid-tide, backshore and dune environments.	54
VII	Average depth change per unit length of profile on the basis of station sets.	61
VIII	Wind regimes and volumetric change, May-July, August-October incl., 1971.	63
IX	Statistics, tests of hypotheses and estimates of sample parameters for slope and grain size regression analysis.	66

LIST OF FIGURES

		following page
Figure 1	Location of west Wellington coast study area.	2
2	Percentage frequency of wind speed and direction at Ohakea, 1940-49.	12
3	Mean annual rainfall distribution, west Wellington province.	13
4	Offshore bathymetry of eastern Cook Strait.	18
5	Sediment distribution over the continental shelf west of central New Zealand.	20
6	Surface coastal currents of central New Zealand.	23
7	Linear fetch at selected sites.	26
8	Refraction diagram of north-westerly wave system: period ten seconds.	32
9	Refraction diagram of westerly wave system: period ten seconds.	32
10	Refraction diagram of south-westerly wave system: period ten seconds.	32
11	Refraction diagram of southerly wave system: period ten seconds.	32
12	Location of sampling stations.	41
13	Source areas of mineral suites supplied to the west Wellington coast.	45
14	Levels of hydraulic equivalence of selected heavy minerals.	46
15	Longshore mean grain size variation of foreshore samples.	49
16	Idealised profile types.	58
17	Average inter-survey change across each profile.	60
18	Net volumetric change per profile on basis of station sets.	61

LIST OF FIGURES (continued)

		following page	
Figure	19	Relationship between mean grain size (M_z) and beach foreshore slope.	65
	20	Nature of interaction between the major elements of a Beach-erosion model.	75
	21	Refraction of westerly wave train around Kapiti Island: period ten seconds.	77
	22	Sediment source-sink areas for the Waikanae-Paekakariki foreshore zone.	78

LIST OF PLATES

Plate		following page
frontispiece	Aerial view of Otaki river mouth and beach foreshore.	
1	View of foreshore berms and beach cusp development, south of Otaki river.	59
2	View of beach conditions, Raumati South.	75
