THE EFFECTS ON PASTURE OF THE WINTER GRAZING
OF DRY DAIRY COWS

A thesis
presented in partial fulfilment of the requirements
for the degree
of
MASTER OF AGRICULTURAL SCIENCE
at
Massey University

P. N. P. MATTHEWS

1971

A C K N O W L E D G E M E N T S

I should like to extend thanks to the following people who assisted in one form or another in the course of experimental work or in the compilation of this thesis :

Firstly, I should like to thank Professor B.R. Watkin who supervised this study and supplied encouragement and guidance at all times.

To Mr A.G. Campbell and Mr D.B. Edmond for helpful discussion, criticism and material assistance.

To Mr K.E Jury for advice on statistical analysis and for carrying out the regression analysis presented. Also to Professor R. Mundford for making available his multi-purpose analysis of variance programme.

To Mr I.P.M. MacQueen for supplying experimental animals and the land required for both experiments and to Mr T. Lynch and his staff at No. 3 Dairy for assistance in drafting and moving stock. Also to my father, without whose assistance the volume of work associated with each grazing period would have been excessive.

To Mrs V. Swan for the unenviable task of typing the final copy of this text.

Lastly, I must thank my wife Frances, for the understanding and sacrifices made, during the writing of this thesis.

INTRODUCTION	1
CHAPTER I : Review of literature	
Introduction	4
Pasture growth with defoliation	4
The influence of the animal upon pastures	16
Winter pasture production	41
Animal requirements	45
Winter management	51
CHAPTER II : Experimental Outline and Methods	
Introduction	59
Outline	60
Layout	62
Methods	69
CHAPTER III : Results - Experiment I	
Grazing intensity v's grazing duration	82
Between days	105
Control (cut) v's grazed	105
CHAPTER IV : Results - Experiment II	
Grazing intensity v's grazing duration	121
Between days	143
Control (cut) v's grazed	164
CHAPTER V : Discussion	
Design and methods	179
Experiment I	187
Experiment II	199

APPENDICES	

L I S T O F T A B L E S

<u>Table</u>		<u>Page</u>
I	Herbage yield (lb D.M./acre) following treading treatments by sheep (from Edmond, 1958c)	25
II	Fate of nutrients ingested by dairy cattle (from Davies <u>et al.</u> , 1962)	33
III	Concentration of nutrients (lb/acre) under individual excretions (calculated by Petersen <u>et al.</u> , 1956 b)	35
IV	The growth of Manawa ryegrass pastures in the late autumn and winter (from Brougham, 1956b)	43
V	Growth of Manawa ryegrass pastures in the winter under three defoliation treatments (from Brougham 1956 b).	44
VI	Maintenance requirements for dairy cattle (lb D.O.M. and lb D.M. per cow per day)	48
VII	Estimated daily energy requirements for pregnancy (lb D.O.M. and lb D.M.)	49
VIII	Experiment I and II - Plot dimensions	63
IX	Experiment I - Cow weights (lb liveweight)	82
X	Experiment I - Daily D.M. intake and percentage utilization	83
XI	Experiment I - D.M. Production (lb D.M./acre)	85
XII	Experiment I - D.M. Production, significant results	86
XIII	Experiment I - Regression log D.M. on time for grazing intensity and grazing duration	90
XIV	Experiment I - The effect of grazing durations on total grass tiller populations (tillers/ft ²)	100
XV	Experiment I - Ground cover	100

XVI	Experiment I - Soil bulk density (gm/cc)	104
XVII	Experiment I - Soil bulk density means between replicates (gm/cc)	105
XVIII	Experiment I - Defoliation treatment effects on production (lb D.M./acre)	106
XIX	Experiment I - Differences between plots cut and those grazed at different defoliation intensities (lb D.M./acre)	108
XX	Experiment I - Regression log D.M. with time for defoliation treatments	109
XXI	Experiment I - The effect of defoliation treatment on ryegrass and timothy tiller populations	117
XXII	Experiment I - The effect of defoliation treatment on ground cover (% bare ground)	117
XXIII	Experiment I - Defoliation treatment effect upon soil bulk density (gm/cc)	120
XXIV	Experiment II - Cow weights (lb liveweight)	121
XXV	Experiment II - Daily D.M. intake and percentage utilization	122
XXVI	Experiment II - D.M. Production (lbs D.M./acre)	124
XXVII	Experiment II - D.M. Production, Significant results due to grazing intensity and grazing duration	125
XXVIII	Experiment II - Difference in D.M. production (lb/acre) between grazing intensities (120 cow days per acre - 200 cow days per acre)	125
XXIX	Experiment II - Difference in D.M. production (lb/acre) between durations within grazing intensities	129
XXX	Experiment II - Mean D.M. production per Replicate (lb D.M./acre)	129

XXXI	Experiment II - Regression log D.M. with time for grazing duration and grazing intensity treatments	130
XXXII	Experiment II - Grazing duration effects on total grass tiller populations	140
XXXIII	Experiment II - Grazing intensity and grazing duration effects upon soil bulk density (gm/cc)	142
XXXIV	Experiment II - D.M. production, between days	145
XXXV	Experiment II - Regression log D.M. with time for between day comparisons	149
XXXVI	Experiment II - Between day differences in unsown grass tiller populations due to a '6 hour' grazing duration	161
XXXVII	Experiment II - Between day, grazing duration effects on soil bulk density (gm/cc)	163
XXXVIII	Experiment II - Defoliation treatment effect on D.M. utilization and intake	164
XXXIX	Experiment II - The effect of cutting and grazing on D.M. production (lb D.M./acre)	166
XL	Experiment II - D.M. production, significant results due to defoliation treatment	166
XLI	Experiment II - Regression log D.M. with time for defoliation treatments	168
XLII	Experiment II - Defoliation treatment effect on soil moisture (%)	177
XLIII	Experiment II - Defoliation treatment effect on soil bulk density (gm/cc)	178
XLIV	Experiment I - Grazing pressure and actual and corrected Post-grazing D.M. residues	189
XLV	Experiment II - Grazing pressures of grazing intensity and grazing duration treatments	200

XLVI	Experiment II - Grazing duration and grazing intensity effects on regrowth for the first 10 days following grazing (1b D.M. per acre per day)	204
XLVII	Experiment II - Between day effects on regrowth for the first 10 days following grazing (1b D.M. per acre per day)	208
XLVIII	Experiment II - Defoliation treatment effect on D.M. regrowth over the first 10 days following grazing (1b D.M. per acre per day)	210
