During a total eclipse of the Sun, the tip of the Moon's shadow touches the Earth and the Moon's orbital velocity carries the shadow rapidly eastward. Only along a narrow path is the eclipse total. Regions to the side of the path of totality experience varying degrees of partial eclipse. (This diagram is accurate for 11:50 A.M. PDT during the total solar eclipse of July 11, 1991.)

Statistics of the Saturn V

The reliable Saturn rocket has been taking U.S. astronauts into space since the Apollo 7 mission last year.

The most powerful known "launch vehicle" in use, it is 365ft. high — equivalent to a 36-storey building — and weighs 3000 tons. The first stage (138ft. long, 33ft. in diameter) develop 7.5 million lb of thrust—160,000,000 horse-power or the power of thousands of cars.

It burns 15 tons of super-cold liquid oxygen (LOX) per second during its 2½ minutes of life and drops away 36 miles up with the vehicle travelling at 6000 m.p.h.

Nine minutes after lift-off, at 108 miles, the 81ft.-long second stage is detached.

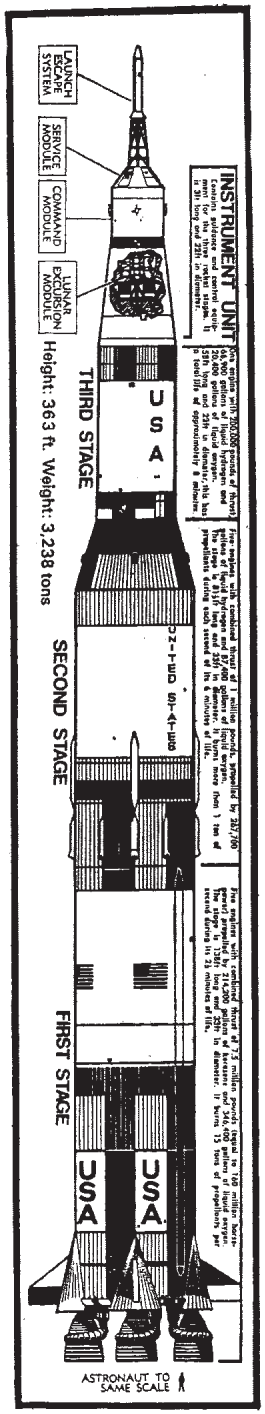
Speed is now 17,400 m.p.h. Like the second, the 58ft.-long third stage uses LOX and liquid hydrogen. five engines of the Initially it burns for two minutes to put the vehicle in an "earth parking orbit".

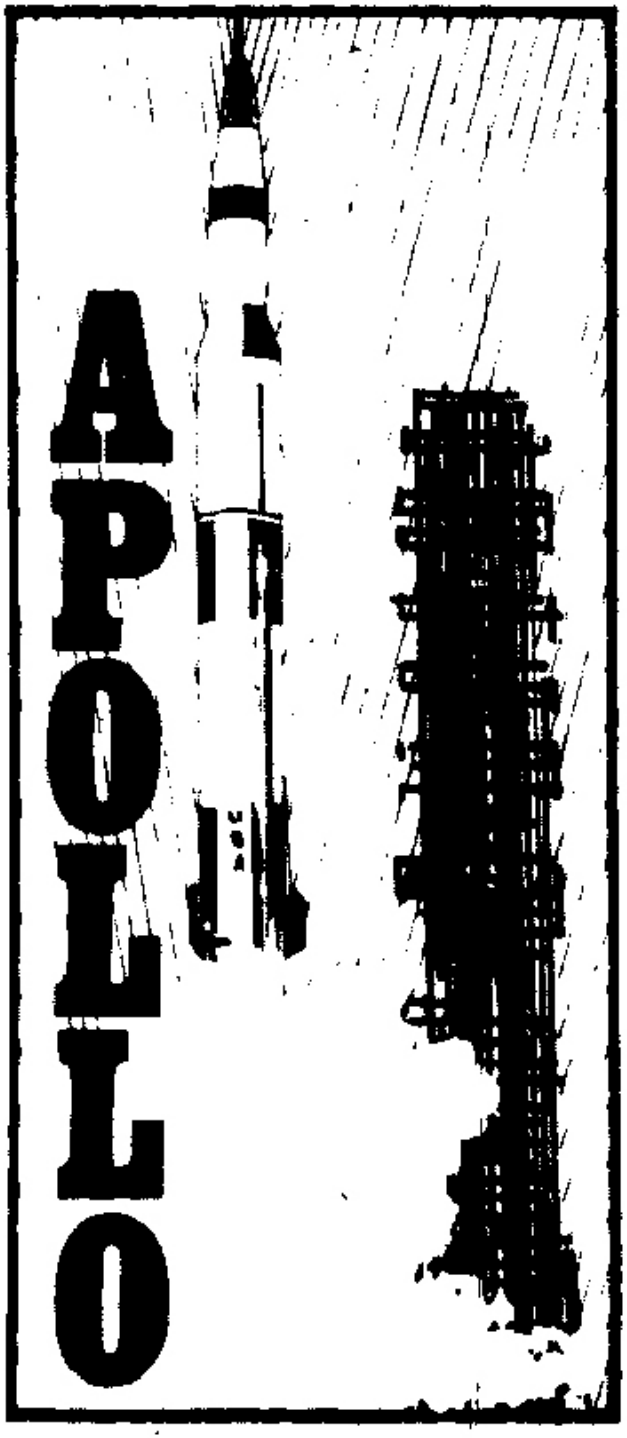
Then, on the second orbit, it is fired again for six minutes, accelerating to 24,900 m.p.h. before disconnecting.

Only after this burst is the Apollo spacecraft—comprising the command, service and lunar modules — truly headed for the moon.

Saturn, which uses more than one million gallons of fuel in all, is capable of sending a payload of 47 tons to the moon.

Wernher von Braun, the rocket pioneer, believes it could be used to put a payload of 140 tons round the earth.





FANTASIES AND REALITY

On Thursday the Apollo 11 space vehicle is to lift off from Cape Kennedy carrying three American astronauts toward the moon and the most spectacular feat of exploration in history.

The French fiction writer Jules Verne 104 years ago remarkably anticipated many details of space flights in his fantasies of an imaginary voyage, "From the Earth to the Moon" and "All Around the Moon."

Some of the intriguing resemblances between Verne's vision of long ago and the reality of today's headlines are revealed in these illustrations and excerpts from his books and by illustrations of previous space shots.

The material, compiled by A. N. Kontaratos, is of excerpts from "Verne's Fantasy—Apollo Reality," prepared by Bellcomm., Inc., for the National Aeronautics and Space Administration.

HOUSTON (Texas), July 20.—Man landed on the moon at 4.18pm on Sunday, July 20, 1969 (8.18am, New Zealand standard time, July 21) the Associated Press reported.

Astronauts Neil Armstrong and Edwin Aldrin flew their fragile moonship Eagle to a gentle touchdown on the moon today.

"The Eagle has landed," mission

Moon commander—Armstrong

"Eagle" pilot—Aldrin

ON TV TONIGHT

The Canberra bomber bringing the film of the moon walk for the New Zealand television network is to land at Wellington. As soon as it is available the four TV stations will be linked

A DREAM OF AGES HAS COME TRUE

SPACE CENTRE (Houston, Texas), July 20.—Neil Armstrong and Edwin Aldrin from a planet called Earth and a nation called the United States of America, settled down onto soil no man had ever touched before. A dream of the ages had come true.

These two men, who etched their names beside the great explorers of the past brought their spaceship named Eagle down on the moon's Sea of Tranquility after a dangerous and difficult descent from the Apollo 11 command ship.

Astronaut Michael Collins remained at the controls of the command vehicle, called Columbia, orbiting more than 60 miles overhead.

The drop to the surface in the four-legged landing took more than two hours and required the flawless meshing of men and machine to accomplish man's first visit to a planet other than earth.

Armstrong and Aldrin had little time to enjoy the view. They immediately began an exhaustive check of the landing vehicle.

Any major problem would cause them to attempt an immediate blast-off to rejoin Collins.

Epic Walk

The landing was the start of an epic exploration in which Armstrong and Aldrin are to walk the lunar surface, collecting precious bits of this new world, deploying scientific instruments and seeing what it is like for man to work in the moon's one-sixth gravity.

Armstrong plans to take man's first step on another celestial body tomorrow at 0656 GMT (4.16pm NZ time) today, followed about 20 minutes later by Aldrin.

Through television, much of the world is to watch their excursion on the surface. Live pictures are to be relayed from a TV camera which the astronauts are to mount 30 feet from the landing craft.

Heat Factor

Armstrong and Aldrin plan to explore outside for about two and a half hours. In that time they will open the boundless frontier of space a little more and clear the way for future flights beyond present imagination.

Temperatures on the moon range from minus 150 to plus 250 degrees Fahrenheit, but Armstrong and Aldrin should not have any problems during their visit, United Press International said. They wear air conditioned spacesuits.

The moon has no air and the heat of the sun beats unfiltered on its rugged surface. Where there is no sunlight, the cold of space chills the moon.

The surface temperature on the sunlit areas of the moon depends on the angle of the sun. When Armstrong steps out of the Eagle lunar module the sun will be at an angle of 15.5 deg in the Sea of Tranquillity and the temperature should be between 40 and 50 deg.

Long after the astronauts have gone, after the sun reaches its mid-day zenith, the lunar surface reading will climb to 250 deg.

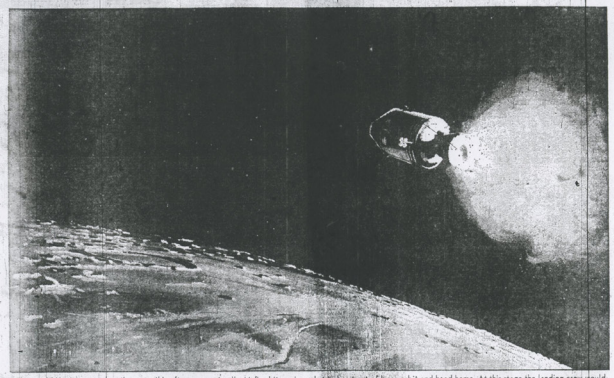
THE TURN FOR HOME



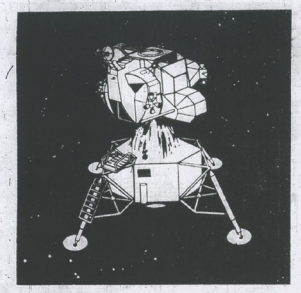
This would be the scene over the moon this afternoon as Apollo 11 fired its main rockets to burst out of lunar orbit and head home. At this stage the landing crew would have transferred from the moon module and it would have been blasted off and abandoned in space — its faultlessly performed task over. (NASA drawing).

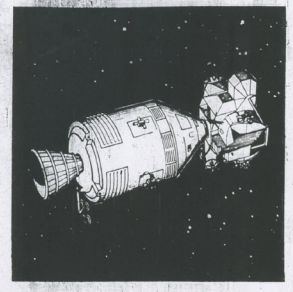
TIMED FOR 4.53 pm

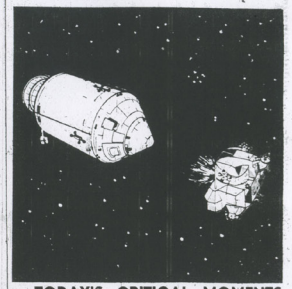
ASTRONAUTS Neil Armstrong and Edwin Aldrin blasted off from the moon in spacecraft Eagle today (5.50am NZ time) on the first stage of their journey back to earth.

Eagle docked with Columbia at 9.33am —roughly 3m 35s after its scheduled time, the only step of the whole flight to be late.

After the link-up, Armstrong and Aldrin transferred themselves and their moon samples. The astronauts will head home at 4.53pm today for a Pacific splashdown early on Friday morning.







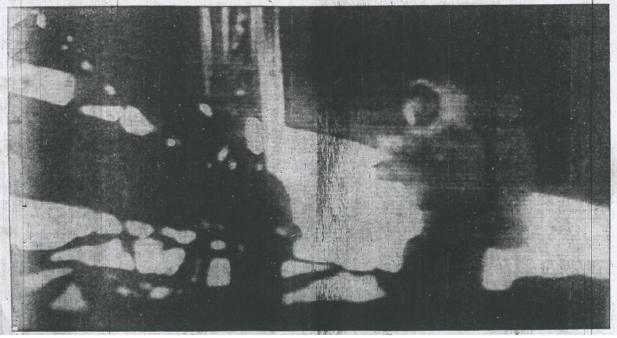
TODAY'S CRITICAL MOMENTS

This diagram, above, shows three vital steps in today's operations bring the moon men home.

● Early today the ascent stage of the lunar module fires its main engine and lifts from its landing stage. The rocket burned for seven minutes to put the craft with its two-man crew into moon orbit.

● Using the moon craft control rockets Armstrong and Aldrin manoeuvre and dock with Calins in the command module. They crawl through the connecting tunnel bringing their precious rocks and films with them.

● With the crew safely in the command module the lunar ascent stage is automatically fired off into space by its own small rockets and Apollo 11 begins preparing for an earth trajectory.



The first steps of man on the moon are taken by Apollo 11 commander Neil Armstrong as, with his life support pack on his back, he moves away from the leg ladder of the module yesterday.

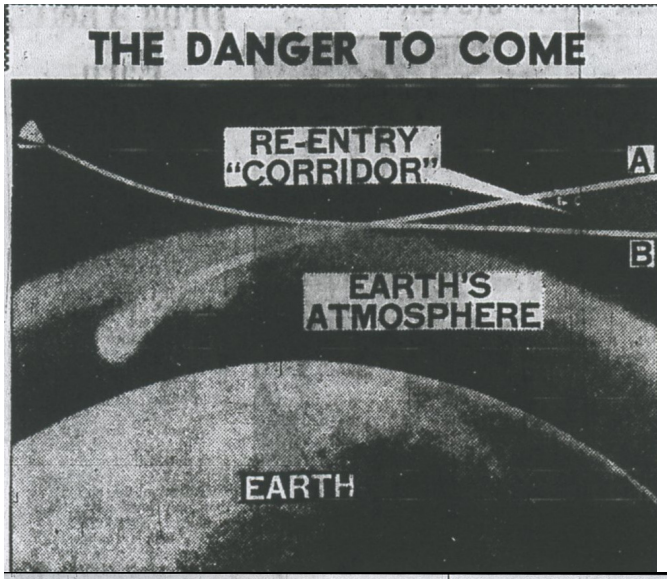
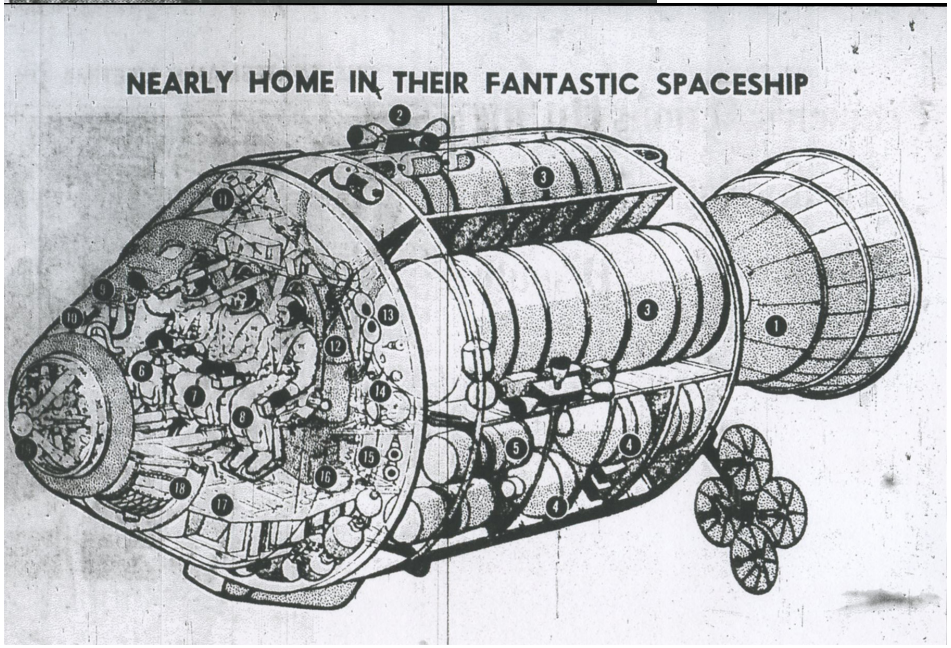
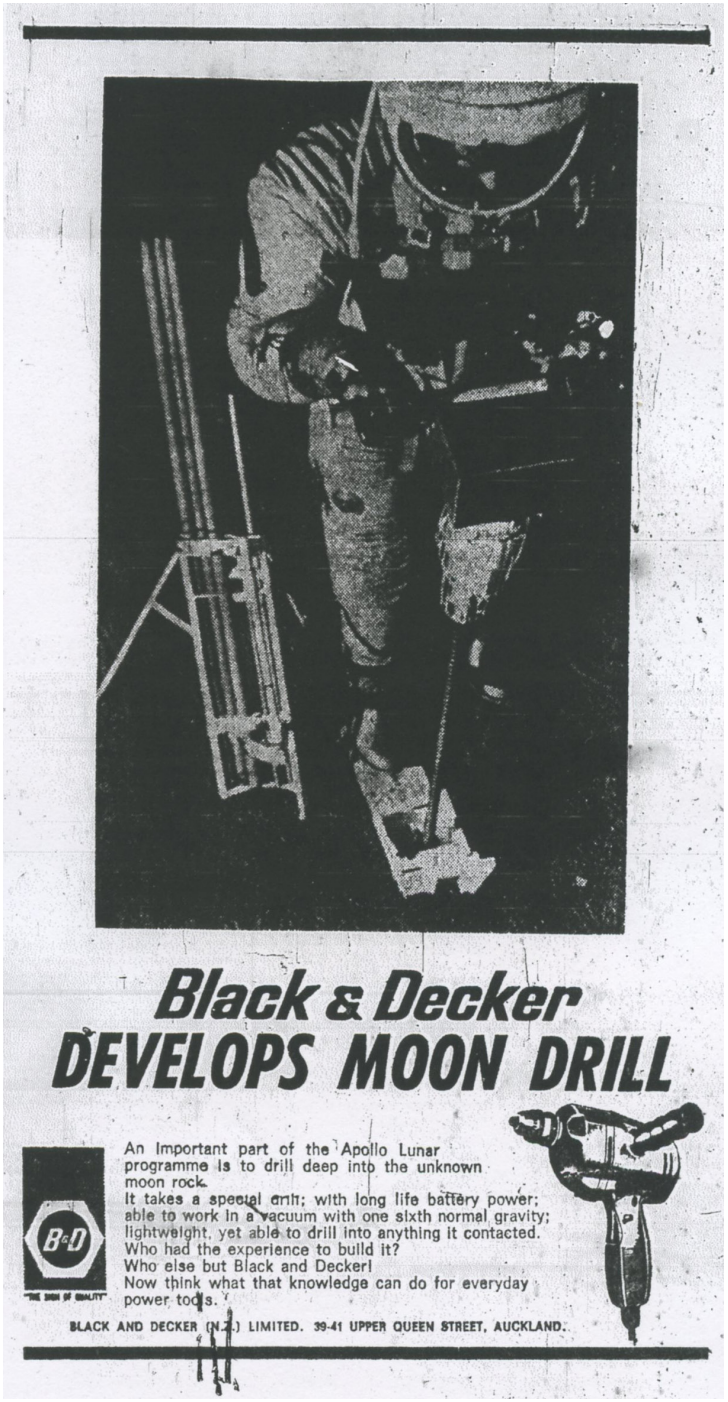
THE DANGER TO COME

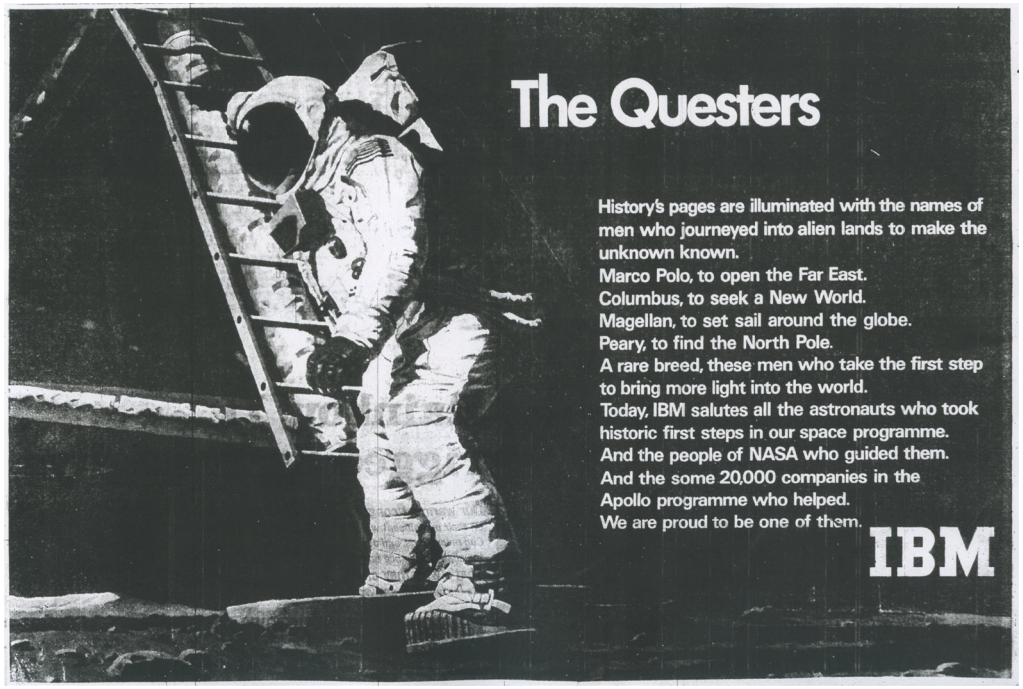


NEARLY HOME IN THEIR FANTASTIC SPACESHIP





Black & Decker
DEVELOPS MOON DRILL
An Important part of the Apollo Lunar programme is to drill deep into the unknown moon rock.
It takes a special drill; with long life battery power; able to work in a vacuum with one sixth normal gravity; lightweight, yet able to drill into anything it contacted.
Who had the experience to build it?
Who else but Black and Decker!
Now think what that knowledge can do for everyday power tools.
B&D
"THE SIGN OF QUALITY"
BLACK AND DECKER (N.Z.) LIMITED. 39-41 UPPER QUEEN STREET, AUCKLAND.



The Questers
History's pages are illuminated with the names of men who journeyed into alien lands to make the unknown known.
Marco Polo, to open the Far East.
Columbus, to seek a New World.
Magellan, to set sail around the globe.
Peary, to find the North Pole.
A rare breed, these men who take the first step to bring more light into the world.
Today, IBM salutes all the astronauts who took historic first steps in our space programme.
And the people of NASA who guided them.
And the some 20,000 companies in the Apollo programme who helped.
We are proud to be one of them.
IBM

To anyone who ever wished on the moon:
FIRST MOON FLIGHTS CLUB
sign up here.
The world's most experienced airline means every word of it. We really do have a waiting list for the moon.
But that's just the lighter side of our deep commitment to the U.S. Space Programme.
For 16 years now, Pan Am has been one of the prime contractors to the U.S. Air Force space centres at Cape Kennedy and the Eastern Test Range.
In 1968 alone, we participated in 36 major launches, with 100% success in meeting scheduled countdown commitments.
As a matter of fact, we're every bit as interested in bringing you to the moon – someday – as we are in bringing you the first Boeing 747's this year.
The 747 isn't exactly a space-craft. But it's far and away the roomiest, quickest and most luxurious jet you've ever flown.
Look at it this way. The world is moving fast. Anything can happen. And the great things tend to happen first on Pan Am. If you'd like something great to happen to you, like a moonflight, just drop us a line. Pan Am, P.O. Box 2918, Auckland.
Pan Am makes the going great.
PAN AM

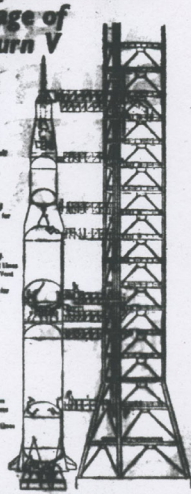
INTERNATIONAL HARVESTER reliability contributes to MOON EXPLORATION

Photographs show Apollo 9 lift-off from Cape Kennedy, the Solar-manufactured clover-leaf antenna on the Apollo Command module, and the dramatic view of the earth from the moon, as seen by the astronauts aboard Apollo 8.

IH-Solar built components and systems in every stage of NASA's Apollo/Saturn V



A division of International Harvester Company, Solar's contributions to the U.S. space programme include over $1-million worth of "hardware" carried into space in each Apollo/Saturn spacecraft, in the Apollo 10 flight that successfully took three astronauts and the lunar test module "Snoopy" to the moon last May, again Solar-built equipment was used and is shown outlined in black in the drawing.

Solar also make antennae for space vehicles, and have developed an intricate communications plant to be left on the moon. Gas turbines and special jet aircraft ducting systems are other products of Solar who have become leaders in these fields, as have International Harvester themselves become leaders in world renowned farm equipment, motor trucks and construction equipment.

SOLAR is a division of INTERNATIONAL HARVESTER COMPANY

04 06 44 53	LMP	Okay, 75 feet. And it's looking good; down a half. 6 forward; light's on. 6 - 60 feet down, 2-1/2, 2 forward, 2 forward.
04 06 45 13	LMP	Looks good. 40 feet down, 2-1/2. Picking up some dust. 30 feet, 2-1/2 down - straight down; 4 forward, 4 forward, drifting to the right a little.
04 06 45 26	LMP	20 feet, down a half; drifting forward just a little bit. Good. Okay.
04 06 45 41	CDR	SHUTDOWN.
04 06 45 42	LMP	Okay. ENGINE STOP; ACA out of DETENT.
04 06 45 43	CDR	Out of DETENT.
04 06 45 45	LMP	AUTO MODE CONTROL, both AUTO; DESCENT ENGINE COMMAND OVERRIDE, OFF; ENGINE ARM, OFF; 413 is in.
04 06 45 52	CDR	ENGINE ARM is OFF.
04 06 45 58	CDR	Houston - Tranquility Base here. THE EAGLE HAS LANDED.
04 06 46 14	CDR	Thank you.
04 06 46 17	CDR	Okay. Let's go on. Okay, we're going to be busy for a minute.
04 06 46 23	LMP	Alright, MASTER ARM, ON. Take care of the descent vent.
04 06 46 25	CDR	MASTER ARM coming OFF.
04 06 46 27	LMP	I'll get the pressure vent.
04 06 46 28	CDR	Okay.
04 06 46 36	LMP	Very smooth touchdown.
04 06 46 49	CDR	I didn't hear that vent going - -
04 06 46 51	LMP	... oxidizer.

Celestial bodies such as stars and planets bend the space that surrounds them.

The reasons for this behaviour are still not completely understood today.
