Dedication

Ki taku whānau toa: Taku Whaiāipo, me aku Tamariki.

He mihi NUNUI to my whaiapo Jasen Wharemate, my LONG-suffering, patient, supportive eternal companion. You complete me honey.

Biiiiig hugs to my three children Szharei (14), Asjanae (8) and Jaran (6) who have sacrificed time with me, prayed so I might finish quickly, comforted me when exhausted and put up with my absence, lack of energy and shortened patience while getting this research done. ☺ ☺ ☺.

To you my awesome whānau, I dedicate this work.

List of Tables	xxiv
CHAPTER 1. Literature Review: Compositional, Nutritional and Sensory Properties of Taewa	1
1.1. Introduction to Taewa (Māori Potato).....	2
1.2. Origin and History of the Potato as a Food.....	5
1.2.1. Origin and Classification of the Potato	5
1.2.2. Migration of the Potato	7
1.2.3. Economic Importance of Potato	8
1.2.4. Uses of Potatoes and Consumption Trends.....	9
1.2.4.1. Industrial Uses.....	9
1.2.4.2. Edible Uses	9
1.2.5. Potato Consumption	10
1.3. Nutritional Potential of Potatoes.....	11
1.3.1. Nutrient Potential of the Potato Tuber	12
1.3.1.1. Proximate Analysis of Potatoes.....	13
1.3.1.2. Carbohydrate Components.....	17
1.3.1.3. Protein and Amino Acids.....	21
1.3.1.4. Lipids and Fatty Acids.....	24
1.3.1.5. Micronutrients (Vitamins, Minerals).....	25

1.3.2.	Phytochemicals.....	29
1.3.3.	Anti-Nutrients (Glycoalkaloids)	30
1.3.4.	Nutrient Density and Satiating Value of Potatoes.....	32
1.3.5.	Potato Products with Improved Nutritional Value.....	33
1.4.	Factors Affecting Nutritional Value	36
1.4.1.	Distribution of Nutrients Within Potato Tubers.....	36
1.4.2.	Genetics.....	38
1.4.3.	Cultivation and Agronomical Factors	39
1.4.4.	Storage	40
1.4.5.	Processing (Cooking, Cooling, Reheating)	41
1.5.	Impact of Nutrient Composition on Potato Quality Assessment and Sensory Acceptance	43
1.5.1.	Relationship of Potato Composition to Assessment of Potato Quality, End Usage and Sensory Attributes	43
1.5.2.	Texture	44
1.5.3.	Flavour and Aftertaste Perception	44
1.5.4.	Appearance	45
1.6.	Food Choice and the Value of a Food.....	46
1.6.1.	Sensory	47
1.6.2.	Nutritional Information	47
1.6.3.	Familiarity / Previous Exposure.....	49
1.6.4.	Emotional, Social, Spiritual, Cultural Value of Food.....	49
1.6.5.	Availability / Accessibility of Products.....	51
1.7.	Reference Materials and Research Goals.....	52
CHAPTER 2.	Investigation of the Nutrient Composition of Four Taewa and One Modern Potato Variety	57
2.1.	Introduction.....	58

2.1.1. Determination of Nutritional Value of Taewa	58
2.2. Experiment One: Proximate / Macronutrient Analysis.....	59
2.2.1. Aim	59
2.2.2. Materials and Methods.....	59
2.2.2.1. Potato Samples	59
2.2.2.3. Analytical Techniques	61
2.2.2.3.1. %Moisture and %Dry Matter	61
2.2.2.3.2. Carbohydrate Content	61
2.2.2.3.3. Crude Protein Estimation.....	61
2.2.2.3.4. Total Dietary Fibre.....	62
2.2.2.3.5. Ash Content.....	62
2.2.2.3.6. Total Lipid Content.....	62
2.2.2.3.7. Gross Energy Content.....	62
2.2.2.3.8. Limitations of Proximate Analytical Methods.....	62
2.2.2.3.9. Degree of Replication and Limits of Uncertainty	63
2.2.4. Experiment One: Results	63
2.2.4.1. Presentation of Results	63
2.2.4.2. Results of Proximate Analysis	63
2.2.5. Experiment One: Discussion	66
2.2.5.1. Comparison of the Proximate Composition of Taewa with Nadine	66
2.2.5.2. Comparison of the Nutrient Composition of Taewa with Other NZ and International Potato Cultivars.....	69
2.2.5.3. Summary of Nutritional Value of Taewa Macronutrients.....	70
2.3. Experiment Two: Micronutrient Analysis	71
2.3.1. Aim	71
2.3.2. Materials and Methods.....	72
2.3.2.1. Potato Samples	72

2.3.2.2.	Chemical Reagents and Standards	72
2.3.3.	Analytical Methods.....	72
2.3.3.1.	Monosaccharide and Disaccharide analysis (Gas Chromatography).....	72
2.3.3.2.	Total Sugar Estimation by Phenol-Sulphuric assay.....	73
2.3.3.3.	Fibre Components	74
2.3.3.4.	Amino Acid Analysis.....	74
2.3.3.5.	Fatty Acid Analysis	74
2.3.3.6.	Mineral Analysis.....	75
2.3.3.7.	Selected Vitamins	75
2.3.3.8.	Limits of Uncertainty	75
2.3.4.	Experiment Two: Results.....	76
2.3.4.1.	Analysis of Carbohydrate Constituents	76
2.3.4.2.	Amino Acid Analysis.....	77
2.3.4.3.	Fatty Acid Analysis	78
2.3.4.4.	Mineral Analysis.....	81
2.3.4.5.	Selected Vitamins	83
2.3.5.	Experiment Two: Discussion.....	84
2.3.5.1.	Comparison of the Micronutrient Composition of Taewa with Nadine.....	84
2.3.5.2.	Notable Differences in Nutrient Composition Between Cultivars or Harvest Years	91
2.3.5.3.	Comparison of Nutrient Content of Taewa with Other NZ and International Potato Cultivars	92
2.3.5.4.	Summary of Nutritional Value of Taewa Micronutrients	94
2.4.	Experiment Three: Phytochemical and Anti-Nutrient Analysis	95
2.4.1.	Aim	95
2.4.2.	Materials and Methods	95
2.4.2.1.	Potato Samples.....	95

2.4.2.2. Reagents and Equipment	95
2.4.3. Analytical Methods	95
2.4.3.1. Phytochemical Analysis.....	95
2.4.3.2. Antioxidant Potential (ORAC and FRAP)	96
2.4.3.3. Anti-Nutrient Analysis: Glycoalkaloid Components	97
2.4.4. Experiment Three: Results.....	97
2.4.4.1. Phytochemical Analysis.....	97
2.4.4.2. Assessment of Antioxidant Potential.....	99
2.4.4.3. Anti-Nutrient Analysis: Glycoalkaloid Components	101
2.4.5. Experiment Three: Discussion	102
2.4.5.1. Phenolic, Flavonoid and Anthocyanin Content and Potential Antioxidant Capacity of Taewa	102
2.4.5.2. Glycoalkaloids	105
2.5. Experiment Four: Effect of Storage and Processing on Nutrient Composition	106
2.5.1. Aim.....	106
2.5.2. Materials	107
2.5.2.1. 6 Month Stored Potato Tubers	107
2.5.2.2. Par-boiled Potatoes.....	107
2.5.3. Methods.....	107
2.5.3.1. Storage	107
2.5.3.2. Par-boiled Potatoes.....	107
2.5.4. Experiment Four: Results.....	108
2.5.4.1. Changes in Nutrient Content Due to Storage	108
2.5.4.2. Effect on Nutrient Content Due to Processing and Cooking Techniques	116
2.5.4.3. Nutrient Content of Par-boiled Potato	116
2.5.5. Experiment Four: Discussion	119

2.5.5.1.	Nutrient and Phytochemical Changes Due to 6 month Storage.....	120
2.5.5.2.	Nutrient Changes Due to Par-boiling.....	123
2.6.	Summary and Key Findings of Chapter 2.....	124

CHAPTER 3. Qualitative Analysis of Usage and Consumption Practices

Associated with Taewa using Group Discussions 127

3.1.	Introduction.....	128
3.2.	Aim.....	128
3.3.	Materials and Methods	129
3.3.1.	Qualitative Methodology	129
3.3.1.1.	Pre-screening and Gaining of Informed Consent	129
3.3.1.2.	Group Discussion Protocol.....	129
3.3.1.3.	Data Analysis.....	131
3.4.	Results.....	131
3.4.1.	Participant Demographics	131
3.4.2.	Nutritional Uses of Taewa	133
3.4.2.1.	Range and Type of Taewa Varieties Eaten	133
3.4.2.2.	Commonly Eaten Varieties	133
3.4.2.3.	Common, Traditional or Modern Cooking Methods of Taewa	134
3.4.2.4.	Taewa Eating Preferences	135
3.4.3.	Non-Nutritional Uses of Taewa	137
3.4.3.1.	Rongoa	137
3.4.3.2.	Other Non-Nutritional Uses.....	138
3.4.4.	Factors Affecting the Consumption of Taewa.....	138
3.4.4.1.	Effect of Sensory Qualities of Taewa on Consumption	138
3.4.4.2.	Cultural, Historical or Emotional Value	140
3.4.4.3.	Impact of Availability, Accessibility or Economic Viability on Taewa Consumption	142

3.4.5.	Suggestions for Future Developments of Taewa.....	144
3.4.5.1.	General Marketing of Taewa	145
3.4.5.2.	Cold or Pre-cooked Cooled Taewa Products.....	148
3.4.5.3.	Other Potential Edible Taewa Products	149
3.5.	Discussion.....	149
3.5.1.	Nutritional Uses of Taewa	150
3.5.2.	Non-Nutritional Uses of Taewa	151
3.5.3.	Factors Affecting Consumption of Taewa.....	152
3.5.4.	Future Developments of Edible Taewa Products	153

CHAPTER 4. Quantitative Analysis of the Cooking and Consumption Practices

	Associated with Taewa using a Large Scale Online Survey	155
4.1.	Introduction	156
4.2.	Aim	157
4.3.	Materials and Methods.....	157
4.3.1.	Methods.....	157
4.3.1.1.	Recruitment of Participants	157
4.3.1.2.	Survey questionnaire	158
4.3.1.3.	Taewa variety names and descriptions.....	159
4.4.	Results	161
4.4.1.	Survey Participant Demographics and Associations with Taewa	161
4.4.2.	Nutritional Aspects Relating to Taewa Consumption.....	161
4.4.2.1.	Range and Type of Taewa Varieties Eaten.....	161
4.4.2.2.	Commonly Eaten Taewa Varieties	166
4.4.2.3.	Taewa Cooking and Eating Preferences	169
4.4.3.	Non-Nutritional Applications for Taewa.....	172
4.4.4.	Factors Affecting Consumption of Taewa.....	173
4.4.4.1.	General Factors Affecting Taewa Consumption	173

4.4.4.2.	Sensory Qualities of Taewa	176
4.4.4.3.	Availability and Accessibility of Taewa Varieties	178
4.4.5.	Potential for Future Developments of Edible Taewa Products.....	194

CHAPTER 6. Evaluation of Sensory Parameters of Four Pre-cooked, 24 hour Cooled Potato Varieties Served at Two Temperatures 251

6.1.	Introduction	252
6.2.	Aim.....	253
6.3.	Materials and Methods	253
6.3.1.	Potato tuber samples	253
6.3.2.	Participants.....	254
6.3.3.	Sensory evaluation protocol.....	254
6.3.4.	Statistical Analysis	255

6.4. Results	256
6.4.1. Effect of Serving Temperature on Consumer Hedonic Ratings	258
6.4.2. Effect of Taewa Variety on Consumer Sensory Ratings at Two Serving Temperatures	258
6.4.2.1. Differences Between Acceptable Sensory Ratings.....	258
6.4.2.2. Differences Between Appearance, Flavour, Taste and Aftertaste of Cultivars at 18°C or 55°C Serving Temperatures.....	260
6.4.2.3. Differences Between Overall Acceptance of Cultivars.....	262
6.4.2.4. Preferred Sensory Attributes Within Cultivars	263
6.4.3. Effect of Nutritional Information on Likelihood of Future Taewa Purchase	264
6.4.4. Evaluation of the Effect of Previous Taewa Consumption on Various Aspects of the Sensory Trial Data	265
6.4.4.1. Effect of Previous Taewa Consumption on Sensory Scores.....	265
6.4.4.2. Effect of Previous Taewa Consumption on Cultivar Preference	265
6.4.4.3. Effect of Previous Taewa Consumption on Likelihood of Future Taewa Purchase.....	266
6.5. Discussion.....	267
6.5.1. Analysis of Overall Fixed Effects	267
6.5.2. Effect of Serving Temperature on Consumer Sensory Ratings.....	268
6.5.3. Effect of Taewa Variety on Consumer Sensory Ratings.....	269
6.5.4. Effect of Nutritional Information on the Likelihood of Purchasing Taewa in the Future.	271
6.5.5. Effect of Previous Taewa Consumption on Various Aspects of the Sensory Trial Data.....	272
6.5.5.1. Preferred Cultivar.....	273
6.5.5.2. Likelihood for Future Taewa Purchase.....	273
6.5.6. Possible Relationship of Varietal Chemical Composition in Huakaroro, Moemoe, Tūtaekuri and Nadine to Sensory Ratings	273

6.5.6.1.	Dry Matter, Sugar, Starch Content and Textural Ratings	274
6.5.6.2.	Flavour Precursors, Fatty Acid Content and Flavour Ratings	274
6.5.6.3.	Phenolic, Glycoalkaloid Content and Aftertaste Ratings	275
6.5.6.4.	Anthocyanin Content and Appearance Ratings.....	277
6.5.7.	Summary of Results.....	278
CHAPTER 7. General Discussion	281
7.1.	Taewa Should Be More Widely Eaten	282
7.1.1.	Taewa Have Excellent Potential for Nutritional Value	282
7.2.	Taewa Should Be More Widely Grown.....	283
7.2.1.	Marketable Traits	283
7.2.2.	Social and Cultural Value.....	285
7.2.3.	Taewa Promote Holistic Health For Māori	285
7.3.	Recommendations and Future Research	286
Key Goal: Improve and extend the availability of Taewa.....	286	
Key Goal: Increase consumer awareness of Taewa	287	
Key Goal: Further explore the nutritional or health value of Taewa	288	
Key Goal: Explore the potential for Taewa product development	289

Acknowledgements

Ehara taku toa i te toa takitahi, engari he toa takitini.

*My success has not come as a result of my efforts alone,
but through the efforts of many.*

As this journey has been a lengthy one, there are many to acknowledge and thank -so it's going to take a while....

Firstly I acknowledge and give honour to my Creators and my Saviour. Without them, I would not be here and without their divine guidance, strength and love, I would have given up on myself long ago.

Ki taku whānau toa: My honey Jasen Wharemate and my three children Szharei, Asjanae and Jaran Wharemate. ☺ ☺ ☺ ☺ To you I dedicate this work.

Ki tōku whānau whānui: E kore te utu mō ō koutou tautoko. Kāre he kōrero hei whakamārama te hōhonu o tōku aroha mō koutou katoa. Thanks for everything guys –the alternative sleeping venues, the babysitting, helping with the mind-numbing jobs that had to be done, the encouragement, the prayers, the meals I didn't have to cook etc. This finished work is as much yours as it is mine.

My doctoral supervisors Kay Rutherford-Markwick, David Thomas, Jane Coad and Chris Cunningham thank you for your expert guidance, support and help. Kay, you have seen me through this right from the start. You have been there through my many ups and downs, struggles and tears. Thank you for not giving up on me, being so understanding, patient and encouraging. You truly are a wahine toa (a champion among women).

To Nick Roskruge and Tahuri Whenua. Although you weren't officially a supervisor Nick –you may as well have been. Thanks for being a huge part in getting me to the end. Apart from being the means through which to get the Taewa, your door and heart has always been open. Hopefully something in here may be of use to you and Tahuri Whenua as a major reason for sticking with this was in the hopes that it might help our people!

For the financial assistance from Massey University, Te Pūmanawa Hauora, Pūrehuroa, IFNHH scholarships and my iwi Ngāti Ranginui. Thank you for the funds and scholarships that have helped keep food on the table, the bills at bay and provided the means through which to go on retreats for the PhD.

HUGE thank you to Sherina Holland for your amazing work with the final thesis editing and checking. You are a legend!

Thanks to the many staff at Massey University who have helped me in different parts of this research: nutrient analysis (Michelle Tamehana, Warwick Johnson and the Nutrition lab staff, in particular Fliss Jackson and Leiza Turnbull); computer or stats analysis and advice (Alison Sefton, Patrick Morel, Matt Levin, Yvonne Parkes, Jonathon Godfrey, Jonathan Marshall); sensory and survey development (BJ Stevenson, John Grigor, Philip Gendall, Brian Wilkinson); somewhere to work and be supported (IFNHH staff, past and present staff at Te Pūmanawa Hauora –in particular Maureen Holdaway, Hope Tupara, Monica Koia and Kay Neho).

Thanks also to other organisations such as Tahuri Whenua, Koanga New Zealand, Te Waka Kai Ora, and volunteers who have been involved in this research through the group discussions, Taewa survey or sensory trial. I hope there is something of benefit to you all in here.

I think that's it. I hope I haven't missed anyone.

KA MAU TE WEHI!!!

Abstract

The term Taewa refers to a collection of at least 18 different potato cultivars belonging to the *Solanum tuberosum* family, which have been cultivated by the Māori peoples of New Zealand for at least 200 years.

Due in part to its economic importance worldwide, the chemical and nutritional composition of today's mainstream potato varieties, and the mechanisms by which composition impacts on their culinary and gastronomic properties, have been extensively researched. However few investigators have studied the nutritional, sensory or potential health properties of Taewa, or which Taewa varieties may be the most preferred for eating. Previous Taewa nutritional research has concentrated on anthocyanin, phenolic or flavonoid content and antioxidant potential, glycoalkaloid content and starch characteristics. The variation in culinary quality and different tuber pigmentation of Taewa suggest that the composition, nutritional and sensory properties of Taewa are diverse and are therefore worthy of investigation.

The first goal of the PhD focused on identifying nutritionally beneficial or commercially viable properties of Māori potatoes. This was carried out by quantifying the macronutrient, selected micronutrient, phenolic and glycoalkaloid components and assessing antioxidant activity (using ORAC and FRAP analysis) of four Taewa varieties (Huakaroro, Karuparera, Moemoe, Tūtaekuri) and comparing them against Nadine, a potato variety commonly available in New Zealand. Analysis was carried out on tuber flesh, tuber skin and whole tuber components over two consecutive harvests. In addition, the effects of 6 months storage at 4°C in 80-90% humidity and par-boiling on the nutrient content were also explored.

The second goal of this research was to ascertain the most popular, commonly eaten and commonly grown Taewa varieties; preferred Taewa cooking and eating practices; the availability of Taewa cultivars across New Zealand and to collate information regarding marketable traits or factors that might affect Taewa consumption. In order to achieve this, group discussions were held with 25 adult participants between 18 to 75 years of age from the Manawatu region. Four key themes emerged from these discussions and were used to develop 20 questions for a larger scale survey from a wider crossection of Taewa consumers.

The third goal of the research aimed to assess two characteristics of nutritional or health value (increased resistant starch in potato boiled then cooled at 4°C for 24 h) and antioxidant capacity (by measuring the total phenolic content, DPPH and FRAP potential) in four common Taewa varieties (Huakaroro, Karuparera, Moemoe, Tūtaekuri) using a popular Taewa cooking practice (boiling whole with the skin on) to develop a Taewa product with improved health benefits. Consumer acceptance was then measured by assessing the sensory ratings of 56 adult volunteer subjects.

Results of the nutrient analysis consistently showed all four Taewa had promising nutritional value with regards to a greater nutrient content, greater accumulation of resistant starch, greater total phenolic content and antioxidant capacity compared to Nadine. The nutrients in Taewa likely to be of most biologically significant nutritional value in comparison to Nadine and other more common NZ potato cultivars included the soluble and insoluble fibre content, the minerals potassium, magnesium and iron and the vitamins thiamine, pyridoxine and niacin. All four Taewa (particularly Tūtaekuri) also showed excellent potential with regards to accumulating resistant starch and exhibiting antioxidant potential compared to Nadine.

Commonly eaten Taewa varieties included Tūtaekuri, Pawhero, Peruperu, Moemoe, Karuparera and Huakaroro. These Taewa varieties were also grown and eaten by residents in a greater number of regions across New Zealand than other Taewa varieties. Cooking and eating preferences included boiling them whole, unpeeled and cooked on their own; eating them hot or warm, with the skin on and seasoned with butter, salt and pepper. If destined to be pre-cooked or served cold, it was suggested that Taewa varieties should be waxy so as to hold together better, be purple or buttery-yellow to add interest with regards to visual appeal, be an appropriate size for the intended dish and have a sweet, nutty, buttery or delicate taste.

New Zealanders should be encouraged to both eat and grow Taewa due to their value as a popular inexpensive food of high nutritional quality, their promise as a means through which to develop functional food products with added health benefits and their cultural significance to all New Zealanders as a unique heritage food. Government agencies, those involved in the Potato Industry, research institutions and funding agencies should be encouraged to work with Māori growers, to ensure the increased production and nationwide availability of Taewa and support the development of Taewa-based functional and snack food products in way that will be beneficial to all.

AA	Amino Acid
AO	Antioxidant Activity
ACYN	Anthocyanin
AI	Adequate Intake
Ala	Alanine
AMG	Amyloglucosidase
ANOVA	Analysis of Variance
AOAC	Association of Official Analytical Chemists International
Arapy	Arabinose pyranoside
Araf	Arabinose furanoside
Arg	Arginine
Asp	Aspartic Acid
AusNZ EAR	Australian and New Zealand Estimated Average Requirement
AusNZ RDI / AI	Australian and New Zealand Recommended Dietary Intake / Adequate Intake
BOIL	Boiled potatoes
°C	Degrees Celcius
C	Carbon
c16:0	Palmitic Acid
c18:0	Stearic Acid
c18:2n6	Linoleic Acid
c18:3n3	Alpha Linolenic Acid
C24:0	Lignoceric acid
Ca	Calcium
Cl	Chlorine
CS	Chemical score
Cu	Copper
Cy3g E	Cyanidin-3-glucoside equivalent
Cy-gal	Cyanidin-3-galactoside
Cy-glu	cyanidin-3-glucoside
Cys	Cysteine
DF	Dilution Factor

df	Degrees of Freedom
DPPH	2, 2-Diphenyl-1-picrylhydrazyl
ΔE	Absorbance (reaction) read against the reagent blank
EAA	Essential Amino Acid
EB	Eaten Before
Fe	Iron
FW	Fresh weight
FWB	Fresh weight basis
FRAP	Ferric Reducing Antioxidant Power
g	Gram
GAE	Gallic Acid Equivalent
Gal	Galactoside
Glu	Glutamic Acid
Gly	Glycine
GM	Genetically Modified
GOPOD reagent	Glucose oxidase/peroxidase reagent
h	Hour
His	Histidine
K	Potassium
KOH	Potassium Hydroxide
kg	Kilogram
ICP-OES	Inductively Coupled Plasma – Optical Emission Spectrometry
IDF	Insoluble dietary fibre
Ile	Isoleucine
Kj	Kilojoule
L	Litre
LCMS	Liquid chromatography-mass spectrometry
Leu	Leucine
Lys	Lysine
M	Molar
min	Minute
Met	Methionine
Mg	Magnesium
mg	Milligram
ml	Millilitre
Mlv-glu	Malvidin-3-glucoside

mm	Millimetre
mM	Millimolar
Mn	Manganese
MUFA	Monounsaturated Fatty Acids
N	Nitrogen
NaCl	Sodium Chloride
ND	Not Detected
NEB	Never Eaten Before
NM	Nano Meters
NRF	Nutrient Rich Foods Index
NZANS	New Zealand Adult Nutrition Survey (2008-2009)
ORAC	Oxygen Radical Absorption Capacity
P	Phosphorus
Phe	Phenylalanine
PKT group	Potato, Kumara, Taro group
Pro	Proline
PUFA	Polyunsaturated Fatty Acids
Q	Quercetin
RAW	Raw Potatoes Samples
REML	Residual Maximum Likelihood Technique
Rha	Rhamnoside
RH18	Boiled, 24 hour Cooled, Reheated to 18 degrees Celsius Potatoes
RH55	Boiled, 24 hour Cooled, Reheated to 55 degrees Celsius Potatoes
RPM	Revolutions Per Minute
RS	Resistant Starch
RSC	Resistant Starch Content
RDS	Rapidly Digestible Starch
Rut	Rutinoside
SCFA	Short Chain Fatty Acids
SD	Soluble Dietary Fibre
SDS	Slowly Digestible Starch
Se	Selenium
Ser	Serine
SEM	Standard Error of the Mean
SFA	Saturated Fatty Acid
S	Sulphur

TAC	Total Anthocyanin Content
TE	Trolox Equivalents
TFA	Total Fatty Acids
Thr	Threonine
TMAH	Trimethylammonium hydroxide
TMS	Trimethylsilyl Sugars
TPC	Total Phenolic Content
TPTZ	2,4,6-tripyridyl-s-triazine
Trp	Tryptophan
Trolox	6-hydroxy-2,5,7,8-tetramethyl-chroman-2-carboxylic acid
Tyr	Tyrosine
µg	Microgram
µl	Microlitre
Unk	Unknown
UEB	Unsure if Eaten Before
Val	Valine
Vse	Volume of Solvent Extract
V/V	Volume to Volume
W	Weight
Xyl	Xyloside
Zn	Zinc
