ECONOMIC GROWTH REVISITED: IDENTIFYING A CLASS OF GROWTH MODELS FOR THE NEW ZEALAND ECONOMY

A thesis submitted in partial fulfilment of the requirements
for the Degree of Master of Applied Economics
at Massey University
New Zealand

NATHAN IAN CALEB MCLELLAN
2000

Abstract

Using data on twenty industries that comprise the market sector of the New Zealand economy, this thesis sets out to indirectly test three classes of economic growth models for the New Zealand economy. This is achieved by investigating the empirical relationships between TFP growth, output and input price growth, and factor intensities; and then comparing these empirical relationships against the predictions of five growth models. On the basis of this comparison some evidence is found to support the hypothesis that the rival human capital class of endogenous growth models is the most appropriate for the New Zealand economy.

Acknowledgements

This thesis would not have been brought to completion if it were not for the expertise, insightful comment, editorial skill, and encouragement of several individuals. I am pleased to have this opportunity to acknowledge their input without implicating them in any way.

First and foremost I wish to thank my chief supervisor, Associate Professor Hans Jürgen Engelbrecht, for the time and effort given in supervising this thesis. In addition, I also want to thank Dr Claudio Michelini for his invaluable econometric advice, and for sharing with me his wonderful sense of humour. Professor Klenow's helpful comments were also appreciated.

To Raewyn Mckinlay – the person who had the unenviable task of proof reading this thesis – many thanks.

To those who have given encouragement and support throughout the 'research process' – Dad, Mum, Robert, Lynn, Natasha, Jim, Raewyn, Sam, John, Simon, Hamish, Rawinia, and Karen – thank you. I also want to thank Dr James Alvey for his advice and encouragement throughout 1999.

Finally, to my best friend Bronwyn Rose McLellan. At times you probably wished that the terms "total factor productivity growth" and "regression model" were banned from the English language. Thank you for being tolerant and understanding. When I commenced this thesis you were a 'Heath'; now you are McLellan. I dedicate this thesis to you.
