THE UTILIZATION OF LACTOSE

BY THE

GROWING PIG

A thesis presented in partial fulfilment of
the requirements for the degree of
Master of Agricultural Science
in Animal Science.

IAN JOHN SHEARER

MASSEY UNIVERSITY

NEW ZEALAND

1967

ACKNOWLEDGEMENTS

It is a pleasure to acknowledge the guidance and encouragement of Mr A.C. Dunkin who supervised the work undertaken for this thesis.

Sincere thanks are also due to Dr R.E. Munford for advice on chemical and statistical analyses, and to all members of the Dairy Husbandry, Biochemistry and Animal Health Departments at Massey University, from whom aid was sought for various reasons.

I would like to record my sincere thanks to the late Mr A.C. Glenday, D.S.I.R. for his advice on statistical procedures.

Acknowledgement is also due to Dr F.R. Cockrem supervisor of the Animal Physiology Unit for making facilities available, and to Mr L. Hawthorne and Mr D.R. Daines for the feeding and care of the experimental animals.

The assistance given by the Art and Photography Departments, Ruakura Agricultural Research Centre, and by Miss D. Scott and Miss C. Mitchell, Central Photographic Unit, Massey University, in the preparation of text figures, is greatly appreciated.

Thanks are also due to Miss M.G. Campbell and the library staff (past and present) for their invaluable assistance in obtaining reference material, and to Mrs J. Fisher of the Department of Agriculture, Palmerston North, for the care taken in typing this thesis.

The author wishes to acknowledge the receipt of a N.Z. Pig Producers' Council Scholarship and to thank the Council for their interest and support.

During the course of this study the author was assisted by the tenure of a Public Service Study Award from the N.Z. Department of Agriculture.

C O N T E N T S

PART I

PHYSIOLOGICAL AND ANATOMICAL ASPECTS

CHAPTER 1

REVIEW OF LITERATURE

	PAGE
1.1 Lactose Utilization by the Growing Pig	1
1.2 Additional Factors Affecting the Performance of Growing Pigs Fed Whey	10
1.3 Lactose Effect on Carcass Quality	11
1.4 Adaptation to High Levels of Lactose	12
1.5 Lactose Induced Caecum Development, and Bacterial Lactose Activity	14

CHAPTER 2

FIRST PRELIMINARY INVESTIGATION

2.1 Introduction	17
2.2 Experimental	17
2.3 Results	21
2.4 Discussion and Conclusions	27

CHAPTER 3

SECOND PRELIMINARY INVESTIGATION

	PAGE
3.1 Introduction	29
3.2 Experimental	29
3.3 Results	31
3.4 Discussion	38
3.5 Conclusions	40

CHAPTER 4

MAIN INVESTIGATION, AND THE COLLECTION STUDY

4.1 Introduction	41
4.2 Experimental	41
4.3 Results	47
4.4 Discussion	65
4.5 Conclusions	77

PART II

BIOCHEMICAL ASPECTS

CHAPTER 1

THE ABSORPTION AND UTILIZATION OF LACTOSE
AND ITS MONOSACCHARIDE DERIVATIVES - A REVIEW

	PAGE
1.1 Absorption of Lactose by the Intestinal Mucosa	79
1.2 Enzyme Hydrolysis of Lactose	79
1.3 Absorption and Metabolism of the Monosaccharide Components of Lactose	82

CHAPTER 2

COLLECTION PROCEDURES

2.1 Introduction	89
2.2 Adopted Procedure	89
2.3 Materials and Methods	89
2.4 Preliminary Studies	94

CHAPTER 3

SAMPLE ANALYSIS

3.1 Total Reducing Sugar Analysis of Urinary and Faecal Protein Free Filtrates	
3.1/1 Review of Literature	96
3.1/2 Methods of Analysis	97
3.1/3 Preliminary Determinations	98

3.1/4	Sample Analysis for Total Reducing Sugar	102
3.1/5	Discussion and Conclusions	105
3.2	Apparent Digestibility and Retention of Nitrogen	
3.2/1	Review of Literature	106
3.2/2	Method of Analysis	108
3.2/3	Results	108
3.2/4	Discussion and Conclusions	111
3.3	Apparent Digestible Energy Determinations	
3.3/1	Review of Literature	114
3.3/2	Method of Analysis	115
3.3/3	Results and Discussion	115
3.4	Apparent Digestibility of Ether Extracts	
3.4/1	Review of Literature	117
3.4/2	Method of Analysis	117
3.4/3	Results	117
3.4/4	Discussion and Conclusion	119
3.5	Lactic Acid Analysis	
3.5/1	Review of Literature	120
3.5/2	Method of Analysis	121
3.5/3	Discussion and Conclusions	122

CHAPTER 4

CHROMATOGRAPHIC SUGAR ANALYSIS

4.1	Faecal and Urinary Analysis	
4.1/1	Introduction	123
4.1/2	Review of Literature	123
4.1/3	Method of Analysis	124
4.1/4	Results and Discussion	127

	PAGE
4.2 Identification of the Faecal Pentose	132
4.2/1 Method Result and Discussion	132

PART III

GENERAL DISCUSSION, POSSIBLE TOPICS
FOR FUTURE RESEARCH, AND
SUMMARY OF RESULTS.

CHAPTER 1

GENERAL DISCUSSION 136

CHAPTER 2

POSSIBLE TOPICS FOR FUTURE RESEARCH 139

CHAPTER 3

SUMMARY OF RESULTS 143

LIST OF TABLES

PART I

PHYSIOLOGICAL AND ANATOMICAL ASPECTS

TABLE		PAGE
1.1	Summary of Lactose, and Whey, Feeding Data	7
2.2/1	Feeding Scale	19
2.3/1	Observations of Dung Consistency for the First 28 Days After Reaching 45 lb Liveweight	22
2.3/2	Growth Rate, Food Consumption, and Food Conversion Efficiency	24
2.3/3	Food Refusals	26
3.3/1	Records of Dung Consistency Over the First 56 Days	32
3.3/2	Mean Growth Rate, Food Intake and Food Conversion Efficiency for a 70 lb Liveweight Gain in Treatments 1 and 2, for a 70-day Investigation Period in Treatments 3 and 4, and for a 60-day Period for All 4 Treatments	34
3.3/3	(a) Lactose Intake (lb) at the Liveweight at which Daily Food Refusals Exceeded 0.5 lb Dry Matter	37
	(b) Daily Lactose Intake (lb) at 50 lb and 120 lb Liveweight and Mean Total Food Refusal for Treatments 2, 3 and 4	38
4.3/1	Number of faecal voidings classified as 'porridge' (P) or 'watery' (W) in each treatment group, over 2 four-week periods for the collection study	50
4.3/2	Liveweight Gain, Food Consumption and Food Conversion Efficiency for Animals in the Main Investigation	51

TABLE	PAGE	
4.3/3	Liveweight Gain, Food Consumption, and Food Conversion Efficiency, for Animals in the Collection Study	56
4.3/4	Lactose Intake per day (lb) at the Liveweight at which Daily Food Refusals Exceeded 0.5 lb D.M. - Main Investigation	58
4.3/5	Liveweight and Daily Intake of Lactose (lb) at which Food Refusals Commenced and Ceased - Collection Study	60
4.3/6	Liveweight at Slaughter, Cold Carcass Weight, 'Killing-Out' Percentage, Specific Gravity (S.G.) and its Reciprocal (R.G.) and Eye Muscle Area	61
4.3/7	Linear Fat Measurements (mm) for the Carcasses from the Collection Study	63
4.3/8	Mean Caecum Measurements for 3 Treatment Groups: Wet Weight, Dry Weight, Tissue Volume, and Length - Combined Data from Both Investigations	65
4.4/1	Summary of Data from the Main Investigation and the Second Preliminary Investigation Illustrating the Relationship between the Amount of food Refused (as a percentage of the total food offered) and the Liveweight of the Animals after 60 days on the Lactose Diets	69

PART II

BIOCHEMICAL ASPECTS

TABLE		PAGE
3.1/1	Sugar Repeatability Determination : Results of 18 Analyses of two Protein Free Filtrates	100
3.1/2	Means and their Standard Errors, of Sugar Concentrations of Urine Samples stored for Four Periods of Time	101
3.1/3	Variability in Total Reducing Sugar Output (milligrams) on two days of a five-day Collection period	103
3.1/4	Mean \pm S.E. of Total Urinary Sugar Loss (gms) for two 5-day Collection periods (at 60 and 110 lb liveweight) and for four Treatment groups	104
3.2/1	Mean daily D.E. and Nitrogen Intake, Apparent Nitrogen Digestibility, and Nitrogen Retention	110
3.2/2	Summary of means and their standard errors for a Treatment x Age Interaction, in the Apparent digestibility of Crude Protein Nitrogen	111
3.3/1	Gross, and Apparent Digestible Energy Values of the four Treatment Diets (Kcal/Kg)	115
3.3/2	Block, Treatment and Collection Means of the Coefficients of Energy Digestibility (%) for the four Treatment Diets	116
3.4/1	Gross Energy, Apparent Digestible Energy, Percent Ether Extract and Apparent Digestibility of the Ether Extract, of four Treatment Diets	118
3.4/2	Means and Standard Errors for a Litter x Age Interaction in Apparent Ether Extract Digestibility	118

TABLE		PAGE
4.1/1	Quantities of Glucose, Galactose, and Lactose (μg) present in Urine Samples, Identified by Thin-Layer Chromatography	129
4.1/2	Quantities (μg) of Pentose from Faeces Filtrates Identified by Thin-Layer Chromatography	130

LIST OF TEXT FIGURES

PART I

PHYSIOLOGICAL AND ANATOMICAL ASPECTS

FIGURE		PAGE
2.3/1	Individual Growth Rates and Levels of Lactose Intake	23
2.3/2	Growth Rates of the Four Experimental Animals	25
3.3/1	Individual Growth Rates of the 12 Treatment Animals	33
3.3/2	Mean Liveweight Gains of 3 Animals in Each Treatment Group	36
4.3/1	Results of Daily Observations of Dung Consistency for the First, Second, Third and Sixth Weeks of Treatments Three and Four in the Main Investigation	48
4.3/2	Mean Treatment Growth Rates and Their Standard Errors for Animals in the Main Investigation	53
4.3/3	Mean Liveweight Gains for the Four Treatment Groups in the Collection Study	55
4.3/4	Representative caecae from Treatment Three (1) and Treatment One (2)	64

PART II

BIOCHEMICAL ASPECTS

1.3/1	Pathways of Galactose Metabolism	85
2.3/1	The Metabolism Crate and Collection Equipment	90
3.2/1	Nitrogen Digestibility (%) and Nitrogen Retention (%) (A) at 85 lb Liveweight, and (B) at 110 lb Liveweight, for Diets Containing 0, 15, 30 and 45 % Lactose	112
4.1/1	Thin-Layer Chromatographic Separation of Glucose, Galactose and Lactose	125

FIGURE		PAGE
4.1/2	Thin-Layer Chromatoplates of Urinary Filtrates	128
4.1/3	Thin-Layer Chromatoplates of Filtrates Prepared from 'Normal' and Diarrhoeal Faeces	131
4.2/1	Faecal Pentose Identification Using Paper Chromatography	133

PART III

DISCUSSION AND SUMMARY

1.1	Summary of the Biochemical, Physiological, and Anatomical Effects of High Dietary Levels of Lactose, and their Influence on Liveweight Gain	135
