THE EFFECT OF MONENSIN SODIUM ON
LACTATIONAL PERFORMANCE OF AUTUMN-
AND SPRING-CALVING COWS

A thesis presented in partial fulfillment
of the requirements for the degree
of Masters of Agricultural Science
in Animal Science at
Massey University

James Arthur Maas
1990

ACKNOWLEDGEMENTS

Many people have made a contribution to this project. The help of each and every individual is appreciated.

Thank you to the laboratory and technical staff at Massey without whom work like this would never come to fruition. Research requires the effort of many people who must work as team. The chain is only as strong as the weakest link and every job is important. I would like to thank Rosemary Watson and Angela Rowan in the Nutrition lab, Margaret Scott, Yvette Cottam and Felicity Jackson in the Physiology lab, and Barry Parlane and Jeff Purchas for their help at the A.P.U. Thank you to the farm staff at Massey No. 1 and No. 4 dairy farms who were very cooperative, and made the whole project much easier. I am grateful to Dorian Garrick for the statistical assistance.

My sincere thanks to a couple of diligent and dedicated "real Kiwi's" ; Dean Burnham for his conscientious assistance with the sheep, and Murray Hunt for your help with the cows and the ability to keep smiling, even at 4 o'clock in the morning!

I have thoroughly enjoyed my work with the graduate students at Massey who have come to study from "all four corners of the world". In future, distance may separate us, but we will never really be far apart. Thank you to Alison Waters, Gisela Ahlborn-Breier, Carlos Sosa-Ferreya, Tessa Mathew and Tatsushi Inoue for your friendship. A special thanks to Mr. Zhen Zhong Xu from The Peoples Republic of China, and to Mr. Ardeshir Nejati from Iran for your friendship, advice, encouragement and academic motivation.

Another group of people, who just happened to be half way around the world, were also a big help. Thank you to our friends in Bruce County and my colleagues of the class of "O.A.C. 83". Your letters, phone calls and gifts have been most appreciated.

Thank you to my family for their support and encouragement. Special mention goes to my sister Judith for sending "care" packages, and attending to our business and personal matters in our absence.

The financial assistance of the H.E. Akers, Murray and J. A. Anderson scholarships is gratefully acknowledged.

Thank you to Robert and Karon Farley of Greytown, New Zealand, for providing the motivation to return to New Zealand and a great deal of help which made our arrival and stay in New Zealand very pleasant.

My wife Jacinta has been most supportive, always ready to make personal sacrifices to allow me take up a new challenge. Your encouragement, patience and understanding, particularly when very long hours of work were required, allowed me to concentrate on the job at hand. Thank you for your all hard work to help support us financially.

Finally I would like to express my most sincere gratitude to my supervisors Gavin Wilson, Stuart McCutcheon, and Gerrad Lynch. You have all been a tremendous help from the day I arrived at Massey until completion of the project. Thanks for always having an open door, no matter how trivial the question. I thank you for your enthusiasm, stimulation, encouragement and understanding. I will endeavor to pass these principles on to others.

LIST OF ABBREVIATIONS	ix
LEVELS OF STATISTICAL SIGNIFICANCE	xi

CHAPTER I : INTRODUCTION

GENERAL OVERVIEW	1
NEW ZEALAND DAIRY PRODUCTION	2
RUMEN MODIFIERS	4
EFFECTS OF RUMEN MODIFIERS ON PRODUCTION	5
1) Growing beef cattle	5
2) Lactating beef cows	6
3) Lactating dairy cows	7
NUTRIENT UTILIZATION BY THE DAIRY COW	10
MODE OF ACTION OF MONENSIN	12
1) Mode of action on microbial cells	12
2) Rumen system mode of action.....	13
a) Volatile fatty acid production.....	14
b) Gas production	16
c) Protein utilization	16
d) Rumen fill and rate of passage.....	17
e) Voluntary feed intake.....	19
f) Digestibility modification	20
g) Other responses.....	22
3) Monensin Mode of Action in Relation to Milk Production	
Responses	22
AUTUMN VS SPRING MILK PRODUCTION	24
APPLICATION OF MONENSIN TO THE NEW ZEALAND SITUATION	25
PURPOSE AND SCOPE OF THIS INVESTIGATION	26

CHAPTER II : THE EFFECT OF MONENSIN SODIUM ON LACTATIONAL PERFORMANCE OF AUTUMN- AND SPRING-CALVING COWS

ABSTRACT	28
INTRODUCTION	30
MATERIALS AND METHODS	32
Experiment 1: Autumn-calving cows	32
Experiment 2: Spring-calving cows	33
Experiment 3: Sheep fed fresh cut pasture in autumn and spring	33
Chemical analyses	35
Statistical analyses	36
RESULTS	38
Experiment 1: Autumn calving-cows	38
Milk production, liveweight and condition score.....	38
Plasma hormone and metabolite levels.....	42
Experiment 2: Spring-calving cows	45
Milk production, liveweight and condition score.....	45
Plasma hormone and metabolite levels.....	50
Experiment 3: Sheep fed fresh cut pasture in autumn and spring	53
Pasture chemical analysis.....	53
Voluntary feed intake, feed apparent digestibility and nitrogen_balance.....	53
Rumen volatile fatty acid production.....	56
Rumen production of lipogenic and glucogenic VFA's.....	57
Rumen ammonia level and pH.....	59
Plasma hormone and metabolite levels.....	60
DISCUSSION	63

List of Abbreviations

a.m.	(<i>ante meridiem</i>) before midday
Ac:Pr	Acetate:Propionate
ADG	average daily gain
ANOVA	Analysis of Variance
A.P.U.	Animal Physiology Unit
°C	degrees Celsius
DM	dry matter
EDTA	Ethylenediaminetetraacetic acid
FCE	feed conversion efficiency
≥	greater than or equal to
g	gram
<i>g</i>	gravity
H ⁺	hydrogen ion
h	hours
ha	hectare
ID	inner diameter
IU	international unit
l	litre
K ⁺	potassium ion
kg	kilogram
LCFA	long chain fatty acid
≤	less than or equal to
M	Molar
MANOVA	Multivariate Analysis of Variance
ME	metabolisable energy
MJ	megajoule
MLW	metabolic liveweight
mg	milligram

ml	millilitre
mm	millimetre
N	nitrogen
Na ⁺	sodium ion
NADPH	nicotinamide adenine dinucleotide (phosphate)
NaHCO ₃	sodium bicarbonate
NEFA	non-esterified fatty acid
pH	potential hydrogen
p.m.	(<i>post meridiem</i>) after midday
OD	outer diameter
VFA	volatile fatty acid
VFI	voluntary feed intake
v/v	unit volume (of solute) per unit volume (of solvent)
w/v	unit weight (of solute) per unit volume (of solvent)

LEVELS OF STATISTICAL SIGNIFICANCE

NS	Not significant $P > 0.10$
+	$0.10 > P > 0.05$
*	$0.05 > P > 0.01$
**	$0.01 > P > 0.001$
***	$0.001 > P$
