The author wishes to thank Dr F.R.M. Cockrem for supervising this masterate. The assistance of Drs R. Greenway, N. Bruere and Messrs L. Hawthorne, P. Sutcliffe, and P. Ness is gratefully acknowledged. The cooperation of the New Zealand Dairy Research Institute in preparation of treatment materials, and the New Zealand Wool Research Organisation in analysis of blood plasma is acknowledged. Funds for this project were provided by the New Zealand Wool Research Organisation. Special thanks are due to my good friend Dr G.A. Wickham whose advice and criticism greatly aided the preparation of this manuscript.
