A STUDY ON THE INHERITANCE AND PHENOTYPIC AND GENETIC INTERRELATIONSHIPS AMONG SOME PHYSIOLOGICAL AND PRODUCTIVE VARIABLES IN JERSEY COWS.

A Thesis presented in partial fulfilment of the requirements for the degree of Master of Agricultural Science

by

S. P. SHARMA

Massey University of Manawatu,

New Zealand.

October, 1964

"The key is man's power of accumulative selection: nature gives successive variations; man adds them up in certain directions useful to him." - Darwin, p. 35, sixth edition of "The Origin of Species", 1920 (Quoted by Hazel, L.N., 1943).

ACKNOWLEDGEMENTS

The author is indebted to Dr. D.S. Flux, Dairy Husbandry Department, Massey University of Manawatu, for his advice, guidance and constructive criticism during his supervision of this study; to Dr. R.E. Munford who acted in a supervisory capacity in the absence of Dr. Flux; to Professor A.L. Rae, Sheep Husbandry Department, for his advice on statistical procedure.

Appreciation is also extended to other members of the Dairy Husbandry Department for their help in the initial stages of this study; to the farmers who put animals at the disposal of the author for the collection of data; and to the library staff for procuring important literature.

Special thanks are due to Mr. R. Ball and Mr. L.P. Tripathy whose sincere assistance in the final presentation of this thesis was a great help; and to Miss A. Whitehead for her care and consideration in typing the manuscript.

The study was undertaken during the tenure of a Colombo Plan Scholarship awarded by the Government of New Zealand to whom the author expresses his sincere appreciation.

Finally, my thanks to everybody else who has contributed in any way to this research work.

TABLE OF CONTENTS

PART I

Chapter		Page
	INTRODUCTION	1
I	REVIEW OF LITERATURE	5
	1.1 Variation Encountered in the Physiological Variables	
	1.2 Influence of Environmental Factors on the Physiological Variables	9
	A. Animal Factors	
	(i) Coat Characteristics	
	(ii) Age	12
	(iii) Body Weight	14
	(iv) Stage of Pregnancy	16
	(v) Stage of Lactation and Production Levels	17
	B. Climatic Factors	20
	(i) Air Temperature and Humidity	
	(ii) Solar Radiation	23
	(iii) Rain and Wind	24
	1.3 Techniques for Recording the Physiological Variables	26
	1.4 Repeatability of the Physiological Variables	30
	1.5 Heritability of the Physiological Variables	35
	1.6 Phenotypic and Genetic Correlations Between the Physiological Variables	38
	1.7 Phenotypic and Genetic Correlations Between the Physiological Variables and the Productive Variables	40

Chapter	PART II	Page
II	PRELIMINARY INVESTIGATIONS IN THE MASSEY UNIVERSITY HERDS	41
	2.1 Introduction	
	2.2 Purpose, Materials, Methods and Conclusions	42
	2.3 Methods Used for Recording the Physiological Variables	46
III	REPEATABILITY OF THE PHYSIOLOGICAL VARIABLES	48
	3.1 Introduction	
	3.2 Repeatability of Consecutive Readings	49
	(i) Materials and Methods	
	(ii) Statistical Methods	
	(iii) Results	50
	(iv) Discussion	51
	3.3 Repeatability of the Physiological Variables when Observations were taken at Longer Intervals	53
	(i) Materials and Methods	
	(ii) Results	
	(iii) Discussion	54
	PART III	
IV	COMMERCIAL HERD STUDY	55
	4.1 Introduction	
	4.2 Characteristics of Herds, Stock and Management	56
	(i) Herds	
	(ii) Stock	
	(iii) Management	
	4.3 Recording	57
	(i) General procedure	
	(ii) Number of Recordings Obtained	

Chapter		Page
	4.4. General Materials and Methods	59
	(i) Materials	
	(ii) Methods	
V	PRELIMINARY INVESTIGATIONS ON THE RAW DATA FOR THE PHYSIOLOGICAL VARIABLES	61
	5.1 Introduction	
	5.2 Between Herds, Within Herds and Between Age Groups Within Herds Variance	62
	(i) Materials and Methods	
	(ii) Model Used	
	5.3 Results	66
	5.4 Discussion	69
	(i) Between Herd Variance	
	(ii) Within Herd Variance	
	(iii) Between Age Groups Within Herds Variance	70
VI	HERITABILITY OF THE PHYSIOLOGICAL VARIABLES	72
	6.1 Introduction	
	(i) The Concept of Heritability	
	(ii) Methods for Estimation of Heritability	73
	(iii) Decision on the Method for the Present Study	
	6.2 Materials and Methods	75
	6.3 Results	76
	6.4 Discussion	79
	(i) Correction Factors	
	(ii) Heritability	81

Chapter		Page
VII	PHENOTYPIC AND GENETIC CORRELATIONS BETWEEN THE PHYSIOLOGICAL VARIABLES	84
	7.1 Intrcduction	
	7.2 Common Materials	87
	7.3 Phenotypic Correlations Between the Physiological Variables	88
	(i) Method	
	(ii) Results	
	7.4 Discussion	90
VIII	GENETIC CORRELATIONS BETWEEN THE PHYSIOLOGICAL VARIABLES	93
	8.1 Methods	
	8.2 Results	95
	8.3 Discussion	97
	PART IV	
IX	PHENOTYPIC AND GENETIC CORRELATIONS BETWEEN PHYSIOLOGICAL VARIABLES AND PRODUCTIVE VARIABLES	99
	9.1 Introduction	
	9.2 Materials	100
	9.3 Methods	101
	9.4 Correction for Age	102
	(i) Lactation Milk and Fat Yield	
	(ii) Month's Milk and Fat Yield	
	9.5 Results	106
	(i) Variation in Month's Milk and Fat Yields	
	(ii) Heritability	107
	(iii) Phenotypic Correlations	111
	(iv) Genetic Correlations	112

Chapter		Page
	9.6 Discussion	114
	(i) Correction Factors	
	(ii) Heritability	115
	(iii) Phenotypic Correlations	117
	(iv) Genetic Correlations	118
X	SUMMARY AND CONCLUSIONS	120

LIST OF TABLES

Table No.		Page
1	Ranges, standard deviations and coefficients of variation of the physiological variables as reported by Patchell (1951) and Quartermain (1959).	7
2	Comparison of the repeatabilities of single records of the same cow for the 8 hottest days, versus the entire test period (reported by Seath, 1947).	31
3	Repeatability of consecutive observations on the physiological variables, estimated for dam and daughter groups separately in five herds.	50
4	Repeatability of observations on the Physiological Variables taken at longer intervals in six herds, separate and combined.	53
5	The least squares equations for respiration rate data.	64
6	A tabular form of the Analysis of Variance for testing Interactions.	65
7	Analysis of Variance: Pulse Rate	66
8	Analysis of Variance: Respiration Rate	66
9	Test of Interaction (herd x age group): Respiration rate	67
10	Analysis of Variance: Rectal Temperature	67
11	Intra-herd heritability of pulse rate: dam's record repeated with each daughter's record	76
12	Intra-herd heritability of respiration rate (age-corrected): dam's record repeated with each daughter's record.	77
13	Intra-herd heritability of rectal temperature: dam's record repeated with each daughter's record.	78
14	Comparison of the mean and variance of age-corrected and uncorrected respiration rate data.	80
15	Intra-herd heritability of respirate rate (uncorrected data): dam's record repeated with each daughter's record.	79

Table No.		Page
16	Comparison of the heritability estimates of the physiological variables estimated in hot and cold environments.	81
17	Phenotypic correlations (within herds) between the physiological variables.	88
18	Comparison of the phenotypic correlations between the physiological variables, estimated under various climatic conditions.	91
19	Cross-correlations (within herds) between the physiological variables.	95
20	Within herd mean cross-correlations and within herd genetic correlations between the physiological variables.	95
21	Least squares equations for month's milk and fat yields.	105
22	Analysis of variance: month's milk and fat yields.	106
23	Test of interactions (herd x age group): month's milk and fat yields.	106
24	Intra-herd heritability of lactation milk yield (corrected for age): dam's record repeated with each daughter's record.	107
25	Intra-herd heritability of lactation fat yield (corrected for age): dam's record repeated with each daughter's record.	108
26	Intra-herd heritability of month's milk yield (corrected for age): dam's record, repeated with each daughter's record.	109
27	Intra-herd heritability of month's fat yield (corrected for age): dam's record repeated with each daughter's record.	110
28	Phenotypic correlations (within herd) between the physiological variables and the productive variables.	111
29	Cross-correlation (within herd) between the physiological and the productive variables.	112
30	Within herd mean cross-correlations and genetic correlations between the physiological variables and the productive variables.	113
31	Comparison between the age correction factors used and those of the Dairy Board.	114

Table No.		Page
32	Comparison of the heritability coefficients for the productive variables, estimates in the present study, with those reported previously.	116
33	Estimates of repeatability, heritability, phenotypic and genetic correlations.	126

LIST OF APPENDICES

Appendix No.	
1	Example: estimation of the repeatability of the physiological variables.
2	Repeatability: analyses of variance for the entire data on the physiological variables.
3	Complete summary of the data collected during the investigation.
4	Observations of the physiological variables, classified by age, to study the influence of age.
5	A tabular form of the methods used to calculate age correction factors for respiration rate.
6	Analysis of covariance for pulse rate, respiration rate (age-corrected) and rectal temperature and method for estimating phenotypic correlation coefficients.
7	Analysis of cross products used to estimate within herd cross-correlation.
8	Method used to calculate age-corrected herd average for lactation milk and fat yields.
