A STUDY OF FERTILITY IN
A HERD OF SOWS

A thesis
presented in partial fulfilment of the
requirements for the degree

of

Master of Agricultural Science in
Animal Science

at

Massey University

by

Kaspar Michael Hermann

1980

ACKNOWLEDGEMENTS

It is with sincere appreciation that I acknowledge the guidance and council of both Mr. J. R. Carr and Doctor W. C. Smith, Supervisors of the investigation presented. Their ready assistance has made this an interesting and challenging assignment.

For willing co-operation in the planning and preparation of computer programmes, I extend thanks to Mrs. N. Simpson and Mr. L. Pearson of the Massey University Computer Unit.

To Doctor Professor R. Anderson and Doctor R. Pringle, I wish to express my gratitude for many hours of discussion and guidance in the statistical analysis of relevant data of the study.

I would like to acknowledge the help and co-operation of the staff of the Massey University Pig Research Centre; in particular, Mr. K. Best, Mr. T. Rogers and Mr. G. Pearson for their assistance and co-operation.

Financial assistance from the New Zealand Pork Industry Council and the Leonard Condell Trust during the course of these studies is also acknowledged with gratitude.

I would like to thank Mrs. J. Court for typing the manuscript.

Finally, I must also thank my wife Chrissy, for her patience and encouragement during the period of study.

LIST OF TABLES

TABLE		PAGE
1.1	Attainment of Puberty in Gilts Kept Under Different Lighting Regimes	9.
2.1	Monthly Number of Services and Resultant Farrowings and Returns for a Herd of Sows Over a Seven Year Period	36.
3.1	Monthly Differences (%) in Farrowing to all Services Recorded During Each Month (Relative to Month Shown in Left Hand Column)	42.
3.2	Monthly Differences (%) in Farrowing Rate to Initial Services only Recorded During Each Month (Relative to Month Shown in Left Hand Column)	45.
3.3	Monthly Differences in the Proportion of Returns to Service of Abnormal Length (%) - all Services Included (Relative to Month Shown in Left Hand Column)	49.
3.4	Monthly Differences in the Proportion of Returns to Service of Abnormal Length Between Months (%) to Initial Matings only (Relative to Month Shown in Left Hand Column)	52.
3.5	Influence of Breed of Dam and Parity of Total Number of Births per Litter	56.
3.6	Influence of Breed of Dam and Parity of the Number of Live Births per Litter	58.

LIST OF FIGURES

FIGURE		PAGE
3.1	Mean effect of month of service on farrowing rate to all recorded services.....	44.
3.2	Mean farrowing rate of purebred and crossbred sows..... A = all services B = initial services only	47.
3.3	Mean effect of month of service on farrowing rate to initial services only.....	48.
3.4	Mean effect of month of service on the proportion of returns of abnormal length to all services.....	51.
3.5	Mean effect of month of service on the proportion of returns of abnormal length to initial services only.....	54.
3.6	Mean annual total litter size at birth.....	55.
3.7	Mean effect of month of service on mean number of total births per litter.....	57.
3.8	Mean annual number of live births per litter.....	60.
3.9	Mean effect of month of service on mean number of live births per litter.....	61.
4.1	Relationship between mean monthly farrowing rate and mean monthly daily maximum temperature at time of mating.....	67(a).
4.2	Relationship between mean monthly farrowing rate and mean monthly diurnal temperature fluctuation at time of mating.....	67(b).
