The Development Impact of Workers’ Remittances in Fiji

A thesis presented in partial fulfilment of the requirements for the degree of

Master of Arts

At Massey University
Palmerston North, New Zealand

Nilesh Prakash

2009
Acknowledgements

I would like to express my sincere gratitude to my supervisor, Associate Professor Dr. Rukmani Gounder for her excellent guidance and encouragement throughout my candidature. Her expertise and enthusiasm has been greatly helpful in the completion of this thesis. Many thanks also for her invaluable help in attaining all the datasets used in this study. Special thanks also to Dr. Hattice Ozer-Bali from the Department of Economics and Finance for her advice on econometrics procedures. I extend my sincere gratitude and appreciation to the Government of Fiji, in particular the Ministry of National Planning for providing me an opportunity to undertake postgraduate studies in New Zealand. Special thanks are also due to NZAID for funding my study at Massey University. Particular thanks to Sylvia, Olive and all the staff at the International Student Support for their unconditional support and guidance during my stay in New Zealand. My thanks also go to Mr. Toga Raikoti of the Fiji Islands Bureau of Statistics for providing the household survey data.

I acknowledge the support of my family during my study process. They have been my source of strength. A special thank you to my parents, Ram and Pushpa Lochan for their unconditional love, support and encouragement and to my brothers, Shalend, Sarwesh, Salesh and my sister-in-laws, Sanjani, Prisita and Arispa. Thank you to my two little nieces, Rania and Jia for being the source of joy for my entire family. My special thanks are also due to my family in New Zealand, my sister Shalini for her invaluable love and support and my brother-in-law Prajeet for being there for me always.

I am especially grateful to my friends, Mimi, Mao, Cheryl, Menaga, Faisal, Amber, Renu, Sumi, Andree, Maris, Ali, Aulya, Sony, Ting, Kunsik, Kunjal, Kasey, Alka, Charlie, Tom, Edwin, Nitu, Zong Yu, Worm, John and Shivani for their warmth, humility and for giving me some of the best days of my life. Special thanks are extended to the church congregations, community-based organisations and all those who participated in the surveys in Fiji and New Zealand.

I dedicate this thesis to my Spiritual Master His Holiness Vedavyasa Priya Swami Maharaj and to my parents Ram and Pushpa Lochan.
Abstract

Remittances by international migrants have become an important source of finance for livelihood development amongst the households in Fiji. This is substantiated by the country’s rising migrant stock as a result of unstable political environment and the increasing economic opportunities for skilled manpower. It has been noted that the flow of remittances to Fiji excelled the amount of other capital inflows such as foreign aid and foreign direct investment and have surpassed commodity export earnings in the recent years. This has made remittances the second largest foreign exchange earner in Fiji after tourism.

This thesis examines the developmental impact of workers’ remittances in Fiji, particularly its impact on economic growth, financial sector development, welfare development of the recipient households and an examination of the sustainability of remittance flows. Using an extended neoclassical framework, the empirical evidence finds a positive impact of remittances on economic growth and financial sector development. The welfare development hypothesis is tested using the Household Income and Expenditure Survey (HIES) data. This is analyzed first, by examining the expenditure patterns of the remittance-recipient households, the poverty and inequality effects followed by an assessment of human capital development impact of remittances.

The empirical results show that households which receive remittances do not only expend their remittance income on basic consumption but have other substantive uses such as that on education of children, housing and expenditure on durables and non-durables. The poverty and inequality reducing effects of remittances, employ two counterfactual methodologies to estimate first, what the poverty and inequality indicators would be in a scenario where remittances are treated as an exogenous addition to household income. Second, it tests the effect in a scenario without migration and remittances, which treats remittances as a substitute for migrants’ foregone earnings. The results show strong poverty reducing effects of remittances irrespective of the methodology used while the effects on income distribution are not unambiguous. The results obtained for the human capital development analysis indicate the positive
role of remittances in providing education opportunities for children in the recipient households.

In noting these positive effects of remittances, it must however be acknowledged that the flow of remittances has to be sustainable overtime for households to benefit from human development. From a survey of Fijian-New Zealander migrant households, this study examines the remittance-sustainability debate. The results suggest that a combination of factors such as income of migrants, acquisition of higher education prior to migration and the intention to inherit assets from families in Fiji contribute to continued flow of remittances. These results do not support the hypothesis of remittance decay amongst Fijian migrants in New Zealand but reflect a strong altruistic motive of remittances sent to households in Fiji as insurance against economic shocks. This highlights the importance of development policy in facilitating the flows of migrant remittances for the socio-economic progress of Fiji.
