A STUDY OF THE NUTRITIVE VALUE
OF NEW ZEALAND MEATMEALS

A Thesis Presented in Partial Fulfilment
of the Requirements for the Degree of
Master of Agricultural Science
in the Victoria University of Wellington.

</table>
D. The Effect of the Non-Carbohydrate and the Maillard Reaction on the Enzymatic Liberation of Lysine.
   (1) The Maillard Reaction. 22
   (2) Non-Carbohydrate Retention Reaction. 22
   (3) The Availability of Lysine in Heat Processed Animal Products. 23

E. The Available Lysine and its Estimation. 24

F. Supplementation of the Meatmeals with Amino Acids. 27

G. The Influence of Varying Calcium and Phosphorus Levels on the Growth Rate of the Chickens. 27

H. An Outline of the Present Study on the Nutritive Value of N.Z. Meatmeals. 29

CHAPTER II MATERIALS, METHODS AND EXPERIMENTAL. 31

A. Materials. 31
   (1) Meatmeal. 31
   (2) Autoclaved Meat. 31

B. Methods. 32
   (1) Autoclaving Meat Samples. 32
   (2) Sampling Procedure. 32
   (3) The Chemical Analysis of the Foodstuffs. 33
      (a) Moisture. 33
      (b) Crude Protein. 33
      (c) Fat. 33
      (d) Ash. 34
      (e) Calcium. 34
      (f) Phosphorus. 35
      (g) "Available lysine". 35
   (4) Experimental Brooder. 36
      (a) The Brooders. 36
      (b) The Watering Unit. 36
      (c) The Feeding Unit. 36
   (5) The Management of the Chickens. 39
      (a) The Pre-Experimental Period. 39
      (b) The Experimental Period. 40
      (c) The Weighing Procedure used for Chickens. 41
      (d) The Measurement of the Daily Feed Intakes. 41
G. Experimental.

(1) The Experiments.
   Experiment I
   Experiment II
   Experiment III
   Experiment IV
   Experiment V

(2) The Experimental Diets.
   (a) Preparation of the Diets.
   (b) The Experimental Diets.
      Experiment I
      Experiment II
      Experiment III
      Experiment IV
      Experiment V

CHAPTER III RESULTS

The Meatmeals.

Experiment I
Experiment II
Experiment III
Experiment IV
Experiment V

CHAPTER IV DISCUSSION

(1) The Factors Affecting the Nutritive Value of Meatmeals.
(2) The Chemical Evaluation of Meatmeals.

CHAPTER V SUMMARY

BIBLIOGRAPHY

APPENDICES
LIST OF TABLES

Table I  The Approximate Amino Acid Content of Gelatin and Elastin (N x 6.25). .......................... 3
II  The Amino Acid Content of Meat By-products. ................................................................. 5
III  The Amino Acid Content of Meat. ....................................................................................... 6
IV  The Amino Acid Content of Meat and Meat Scrap. ........................................................... 7
V  The Effect of Heat on Fishmeals. .......................................................................................... 9
VI  The Experimental Diets Fed in Experiment I. ..................................................................... 47
VII  The Experimental Diets Fed in Experiment II. ................................................................. 49
VIII  The Experimental Diets Fed in Experiment III. ............................................................. 50
IX  The Experimental Diets Fed in Experiment IV. ................................................................ 52
X  The Experimental Diets Fed in Experiment V. .................................................................... 55
XI  The Analysis of the Meatmeals. .......................................................................................... 56
XII  The Range of Values for Ash, Protein, Fat, and Moisture obtained in the Analysis of the Meatmeals. .......................................................... 57
XIII  The Analysis of Covariance: Longburn (Trial I); Longburn (Trial II). ........................ 58
XIV  Analysis of Covariance: Trial I Meatmeals. ..................................................................... 60
XV  Analysis of Covariance: Trial II Meatmeals. ..................................................................... 62
XVI  Analysis of Covariance: Trial II Meatmeals, except Waitara and Makarewa. ................ 64
XVII  Analysis of Covariance: Waitara and Makarewa. .......................................................... 65
XVIII The Regression Coefficients of the Meatmeals. ............................................................ 66
XIX  The Relative Potencies of the Meatmeals. ...................................................................... 67
XX  Comparisons between the Nutritive Values of the Meatmeals. ....................................... 68
XXI  The Calcium and Phosphorus Content of the Experimental Diets Fed in Experiment I. .... 70
XXII The F-test for the Feed Intakes. ......................................................................................... 71
XXIII An Analysis of Variance of the Weight Gain Measured on Diets containing 0.3%, 0.8% Phosphorus and 0.5%, 0.9%, 1.4% Calcium.

XXIV The Table of Means.

XXV An Analysis of Variance of Varying Calcium Levels (0.5%, 0.9%, 1.4% and 1.9%) in Diets containing 0.8% Phosphorus.

XXVI The Analysis of the Meat Samples.

XXVII The "Available Lysine" of the Meat Samples.

XXVIII The Reduction in "Available Lysine" when the Autoclaved Meat Samples were Compared to the Freeze Dried Meat.

XXX Analysis of Covariance: Freeze Dried Meat; Autoclaved Meat (5 minutes at 240°F).

XXX Analysis of Covariance: Freeze Dried Meat; Autoclaved Meat (25 minutes at 240°F).

XXXI Analysis of Covariance: Freeze Dried Meat; Autoclaved Meat (2 hrs. at 240°F).

XXXII Analysis of Covariance: Freeze Dried Meat; Autoclaved Meat (2 hrs. at 270°F).

XXXIII The Average Weekly Gain of Freeze Dried Meat; Meat Autoclaved for 2 hrs. at 240°F and for 2 hrs. at 270°F.

XXXIV Analysis of Covariance: Meatmeal (control); Meatmeal (lysine supplemented).

XXXV The Gross Protein Value and the "Available Lysine" of Meatmeals.

ACKNOWLEDGMENTS

The author wishes to thank his supervisor Dr. B.L. Richards for his encouragement and advice on this study. The advice and guidance of Dr. D.S. Flux in statistical matters is also gratefully acknowledged. Special thanks is due to Mr. J.H. Kissling of the College poultry unit and his staff for their valuable help in this study.

Thanks are also due to: Mr. A.E. Esler and Mr. M.R. Grimmett for their assistance with the photography; to Miss B. Handley for her assistance with the chickens; to Miss M.G. Campbell and her library staff for their efforts in obtaining numerous journals.

Special thanks is due to Miss F. Fairweather for typing this thesis.

For the duration of this study the author was assisted by the Shell Oil Company and University Senior Scholarships.
