ACKNOWLEDGEMENTS

I would like to take this opportunity to acknowledge my indebtedness to persons and organisations who have supported the completion of this thesis.

First of all, I would like to express my sincere thanks to Associate Professor Dr. Srikanta Chatterjee, my first thesis supervisor, for his invaluable guidance and supervision.

I also wish to express my thanks to my second thesis supervisor, Associate Professor Dr. Croz Walsh, the Director of Development Studies, whose cheerful and fruitful advice led to many improvements of the study.

My special thanks are dedicated to the Ministry of Foreign Affairs and Trade of New Zealand for the financial support during these two years of study at Massey University.

At the same time, I am also grateful to the Internal Trade Department of Thailand for allowing me to study in New Zealand, and many thanks are also extended to all of my colleagues in the department.

I would like to take this opportunity to thank the staff of the Bank of Thailand, especially Khun Suphaporn, Division of Balance of Payments, for providing me with the extremely useful data on foreign direct investment in Thailand.

Finally, thanks are also due to my beloved family and friends in New Zealand and Thailand, who have given me their love, understanding, moral support and encouragement.
Any benefits of this thesis are dedicated to the above mentioned persons and organisations, while any errors or omissions are all my sole responsibility.

ABSTRACT

Foreign direct investment in Thailand plays a critical role in narrowing the gap between inadequate domestic savings and investment. Domestic production is able to create extremely high economic growth by increasing domestic and foreign demand.

The foreign direct investment is determined by various variables. The most significant determinants are market factors such as the gross domestic product. Cost factors, and investment incentives such as the wage gap between Thailand and the investing countries, and natural resource endowments are found to be significant attractions to foreign direct investment from some sources and in some sectors. At the same time, barriers such as the tax burden and the political risk are not sufficiently significant explaining the patterns of foreign direct investment in Thailand.

As far as the sources of growth are concerned, there are differences in the contribution to economic growth of export growth, domestic demand and investments from different countries. The investments from the United States and European Community countries do not precisely support the export growth, while the investment from Japan and Asian NIC's show stronger signs of contributing to the export growth in industries which have the comparative advantage.
