Participatory management of irrigation systems in the Philippines: An impact assessment

Louella L Labramonte
1997

A thesis presented in partial fulfilment of the requirements for the degree of Master of Applied Science in Agricultural Systems and Management at Massey University
ABSTRACT

Increased national food production is an objective underlying irrigation development in the Philippines. As the population increases, so does food demand. Irrigation is an integral component of agricultural development to meet this growing food demand. Farmer participation has been shown to be a key factor in the successful development of irrigation, although other factors must be combined with participation in order to ensure successful outcomes. This study attempted to find out how farmer-managed irrigation systems impacted on the socio-economic conditions of rural people in the Iloilo Province of the Philippines.

Two levels of respondents were interviewed for the study: 15 representatives of Irrigator Associations (IAs) and 144 farmers from four of these associations in the Iloilo Province. The surveys was conducted in January and February 1996. The survey data were evaluated relative to a conceptual model that comprised four sets of factors (socio-economic/demographic, physical, management and attitudinal) to explain the area under irrigated rice, a proxy variable for management participation.

The farmers in all four irrigation systems had an average age of 49 ± 12 years. The farm size was generally small (1.07 ± 1.51 ha) but the area of irrigated rice owned and leased by farmers averaged to 1.23 ± 0.25 ha. Rice farming provided more than 80% of the household income in the study area. This helped to support 3.8 ± 2.3 children per household. Socio-economic/demographic and physical factors were significantly (P<0.05) associated with management and attitudinal factors. Variables included in a multiple regression model collectively explained 53% of the variation in the irrigated rice area. Other than farm size, distance of the homestead from the main water source, participation in resolving conflicts with officers of the IA and attendance of IA meetings were significant explanatory variables in the model. It is recommended that similar studies of other regions where irrigation is widely used be undertaken and that this include situations where participatory approaches are not adopted. The role of women in irrigation activities should be quantified, as it was not actively explored in the current study.

Keywords: Irrigation development, participation, factors, irrigated rice area.

Title: Participatory management of irrigation systems in the Philippines: An impact assessment.

Author: Louella L. Labramonte, 1997

Degree: Master of Applied Science
ACKNOWLEDGEMENTS

My deepest gratitude and thanks to my supervisors: Dr. Ganesh Rauniyar provided constructive ideas during the planning and analysis of this work. His patience, encouragement and understanding have been remarkable for which I am very grateful: Professor Warren Parker for his valuable comments, suggestions and untiring supervision especially during the last few weeks of the study, thank you very much.

I would like to thank Dr. Bernabe Cocjin, President of the West Visayas State University, for giving me the opportunity to pursue this degree and also my sincere appreciation to Dr. Eleodoro Alicante and Prof. Restituto Lastimoza for their motivation and encouragement.

The National Irrigation Administration, through the Iloilo Provincial Irrigation Office, provided me with assistance as well as the names of farmer who participated in the survey. They deserve a special thanks.

I would like to thank also Evelyn, Denise and Trena who made my stay here in the Department something to remember, their concern and friendship is really wonderful. Denise, thanks for the job well done. To all the Filipino students here at Massey University, especially to Ninia and Jomar who always gave me a helping hand, thank you as well.

To my family back home, especially my mother who really deserves a big thanks for the love and care she showered to my two kids, while I am away for 2 years; Mom, I love you so much.

And finally to my husband, Beboy, for all his love, understanding and patience especially for my unpredictable moods and tantrums. All of these will be compensated. To my two sons, Ralph Louie and Ted Jovic, for the lost time I was supposed to be with you, no words can express what I feel, anyway, I dedicate all my achievements to you.

## CHAPTER ONE - INTRODUCTION

1.1 Background and Statement of the Problem ........................................... 1
1.2 Objectives of the Study ................................................................. 4
1.3 Types of Irrigation Systems ............................................................ 5
1.4 Irrigation Organisation and Management ............................................. 6
   1.4.1 Government’s Role in Irrigation .................................................... 8
   1.4.2 The Provincial Irrigation Office (PIO) .......................................... 8
1.5 Importance of the Study ................................................................. 10
1.6 Limitations of the Study ................................................................. 11
1.7 Thesis Outline ....................................................................................... 11

## CHAPTER TWO - LITERATURE REVIEW

2.1 Management of Irrigation Systems in Developing Countries .................. 12
2.2 People Participation ............................................................................. 16
   2.2.1 Elements of People Participation .................................................. 18
   2.2.2 Effects of Farmer Participation .................................................... 19
4.1.8 Future Membership and Benefits from IAs ............. 41
4.2 Individual Farmers ........................................ .42
  4.2.1 Characteristics of the Farmers ..................... 42
  4.2.2 Farm Characteristics ............................... .46
  4.2.3 Farmer Participation in Irrigation Systems .......... 50
  4.2.4 Farmers Attitudes About the Management of
        Irrigation Systems ................................... 57
4.3 Factors Associated with Farmer Participation in Irrigation-Related
        Activities ............................................. 59
  4.3.1 Association Between Management Factors and Socio-economic
        and Demographic Characteristics ...................... 59
  4.3.2 Association Between Management and Physical Factors ....61
4.4 Factors Associated with Farmer Attitudes About Irrigation
        System Management .................................... 63
  4.4.1 Association Between Socio-economic/Demographic and
        Attitudinal Factors .................................. 63
  4.4.2 Association Between Physical and Attitudinal Factors ....63
4.5 Irrigated Rice Area Under Different Irrigation Systems of
        Iloilo Province ......................................... 65
4.6 Rice Yield for Different Irrigation Systems of Iloilo Province ....66
4.7 Factors Associated with Irrigated Rice Area: Bivariate Results ....66
4.8 Determinants of Irrigated Rice Area: Multivariate Regression Results .68
4.9 Summary .................................................. 69

CHAPTER FIVE - SUMMARY, CONCLUSIONS AND
    RECOMMENDATIONS ........................................ 71

  5.1 Summary .................................................. 71
  5.2 Conclusions ............................................. 76
  5.3 Recommendations ....................................... 77
  5.4 Suggestion for further study ........................... 77
2.3 Factors Associated with the Management of Irrigation Systems

2.3.1 Physical and Environmental Factors

2.3.2 Socio-economic and Demographic Factors

2.3.3 Management Factors

2.3.4 Attitudes/Perception of Farmers

2.4 Gaps in the Literature

CHAPTER THREE - 3 METHODOLOGY

3.1 Conceptual Framework

3.1.1 Socio-economic and Demographic Characteristics

3.1.2 Physical factors

3.1.3 Attitudinal Factors

3.1.4 Management Factors

3.2 Research Methods

3.2.1 Location of the Study

3.2.2 Sampling Procedure

3.2.3 Data Collection

3.3 Data Editing, Coding and Analysis

CHAPTER FOUR - RESULTS AND DISCUSSION

4.1 Irrigators Association

4.1.1 Organisation and Management of Irrigation Systems in Iloilo Province

4.1.2 Involvement in the Repair and Maintenance of the Irrigation Systems

4.1.3 Water Allocation and Distribution

4.1.4 Payment of Irrigation Fee

4.1.5 Attendance in Meetings and Training Seminars

4.1.6 Conflict Management and Resolution

4.1.7 Problems of the Irrigator Associations
